Preface — VII

Basic notations — XIX

Part I: Elements of tropical mathematics

1 Elements of tropical algebras — 5

- 1.1 Main tropical algebraic structures — 5
 - 1.1.1 Canonically ordered monoids — 6
 - 1.1.2 Semi-rings and dioids — 8
- 1.2 Path-finding problems in a graph — 11
 - 1.2.1 Bellman's optimality theorem — 13
 - 1.2.2 Shortest path finding problem within $(\min, +)$ dioid — 13
 - 1.2.3 Maximal capacity path finding problem within $(\max, \min)$ dioid — 13
 - 1.2.4 Fixed-point equation — 13
 - 1.2.5 Algorithms for shortest path problems in a graph — 15
- 1.3 Dioids of a monoid endomorphisms — 16
- 1.4 Linear algebra based on semi-rings and dioids — 17
 - 1.4.1 Semi-modules and moduloids — 17
 - 1.4.2 Linear dependence and independence — 18
 - 1.4.3 Bi-determinant — 18
 - 1.4.4 Eigenvalues and their applications — 18
- 1.5 Typology of tropical algebraic structures — 19

2 Elements of tropical topology — 20

- 2.1 Topologies in ordered sets — 20
 - 2.1.1 Alexandrov topologies — 20
 - 2.1.2 inf-Topologies and sup-topologies — 20
 - 2.1.3 inf-sup-topology — 21
- 2.2 Ordered set convergence — 22
 - 2.2.1 inf-Convergence — 22
 - 2.2.2 sup-Convergence — 22
 - 2.2.3 inf –Limit and sup –Limit — 23
- 2.3 Continuity and semi-continuity of functions — 23
 - 2.3.1 L. s. c. and usc hulls — 24
- 2.4 Fixed-point theorems in ordered sets — 25
- 2.5 Topological dioids — 26
- 2.6 Quasi-inverse and fixed-point-type linear equations — 27

3 Elements of tropical analysis — 28

- 3.1 Tools of $(\min, +)$ -analysis — 28
 - 3.1.1 Integration — 28
 - 3.1.2 Inf-convolution — 28
 - 3.1.3 Legendre–Fenchel transform — 29
 - 3.1.4 Moreau–Yosida transform — 30
 - 3.1.5 $(\min, +)$ Scalar product — 30
 - 3.1.6 $(\min, +)$ Bi-wavelets — 32
- 3.2 Tools of $(\min, \max)$ and $(\max, \min)$ -analysis — 35
 - 3.2.1 Integration — 35
 - 3.2.2 $(\min, \max)$ and $(\max, \min)$ scalar products — 35
 - 3.2.3 $(\min, \max)$ -Bi-wavelets — 35
 - 3.2.4 Examples of bi-wavelets decompositions — 36
- 3.3 Deformation of the dioid $(\mathbb{R}^+, +, \times)$ — 36
 - 3.3.1 Quantum dioids — 36
 - 3.3.2 Quantum pre-scalar products — 42
 - 3.3.3 Quantum pre-scalar bi-product and quantum bi-wavelets — 43

4 Elements of tropical functional analysis — 47

- 4.1 $(\min, +)$ Functional analysis — 47
 - 4.1.1 $\inf - \Phi$ -equivalence relation — 47
 - 4.1.2 Particular test-functions classes — 48
- 4.2 Convergences and distributions theory in $(\min, +)$ -analysis — 52
 - 4.2.1 Epi-convergences in $(\min, +)$ -analysis — 52
 - 4.2.2 Weak convergences — 53
- 4.3 Non-linear partial differential equations — 58
 - 4.3.1 Sub-differentials and super-differentials — 60
 - 4.3.2 Semi-differentiable spaces — 60
- 4.4 Explicit solutions to NL-PDEs in $(\min, +)$ -analysis — 64
 - 4.4.1 Dirichlet problem for Hamilton–Jacobi equations — 65
- 4.5 Cauchy problem for Hamilton–Jacobi equations — 69
 - 4.5.1 $H(\mathcal{D}u)$ — 69
 - 4.5.2 $H(\|\mathcal{D}u\|_X^\rho)$ — 71
- 4.6 $(\min, \max)$ Functional analysis — 72
 - 4.6.1 $\inf$ -Solutions in $(\min, \max)$ -Analysis — 72
 - 4.6.2 $\inf$ -Convergence in $(\min, \max)$ -Analysis — 74
 - 4.6.3 Explicit solutions to NL-PDEs in $(\min, +)$ -analysis — 75
- 4.7 Cramér transform & Hopf–Bardi–Evans formulas — 76

Part II: **Some applications of tropical bi-wavelets to signal processing**

- 5 Tropical bi-wavelets for Hölder exponents and fractal dimensions calculations — 83**
 - 5.1 Fractals and Hausdorff dimensions — 83
 - 5.2 Characterization of Hölderian functions with $(\min, +)$ -Bi-Wavelets analysis — 85
 - 5.2.1 Global regularity — 86
 - 5.2.2 Local regularity — 87
 - 5.3 Hölder exponents and fractal dimensions calculations — 89
 - 5.3.1 Weierstrass functions — 89
 - 5.3.2 Weierstrass–Mandelbrot functions — 91
- 6 Tropical bi-wavelets for multi-fractal analysis — 93**
 - 6.1 Multi-fractal phenomenon example: hydrodynamic turbulence — 93
 - 6.2 Multi-fractals and singularities spectrum — 94
 - 6.2.1 Hölder exponents and multi-fractal spectrum — 94
 - 6.2.2 Heuristic approach of multi-fractal analysis — 95
 - 6.3 Thermodynamic formalism — 96
 - 6.4 Calculations of multi-fractal spectrum — 97
 - 6.4.1 Multi-fractal spectrum and scaling function — 97
 - 6.4.2 Riemann serie — 98
 - 6.4.3 Mandelbrot binomial measure — 100
 - 6.5 Wavelet-transform modulus-maxima method (WTMM) — 101
 - 6.6 Comparison between $(\min, +)$ -Bi-Wavelets and WTMM methods on Mandelbrot cascades — 102
 - 6.7 Perspectives — 103
- 7 Tropical bi-wavelets for image processing — 105**
 - 7.1 Motivations — 105
 - 7.2 Algorithm — 105
 - 7.3 Numerical applications — 106
 - 7.4 Perspectives — 106

Part III: **Tropical intervals**

- 8 Tropical intervals — 115**
 - 8.1 Classical algebraic approach of the intervals set — 115
 - 8.1.1 Intervals & Minkowski operations — 115
 - 8.1.2 Monoid $(\mathbb{IR}, +)$ — 117

8.1.3	Dioid $(\mathbb{IR}^+, +, \times)$ — 117
8.1.4	Sub-distributivity — 117
8.2	Pseudo-intervals — 118
8.2.1	Geometrical representation of interval — 118
8.2.2	Algebraic representation of intervals — 120
8.2.3	Refined products of pseudo-intervals in $\mathbb{IR}_n, n > 4$ — 122
8.2.4	Pseudo-intervals semi-rings $(\mathbb{IR}_n, +, \cdot)$ — 125
8.2.5	Pseudo-intervals arithmetic — 125
8.2.6	Monotony property — 125
8.3	Pseudo-intervals vector space $\overline{\mathbb{IR}}$ — 127
8.3.1	Additive semi-group completion — 127
8.3.2	Banach structure of $\overline{\mathbb{IR}}$ — 130
8.3.3	Differential calculus in $\overline{\mathbb{IR}}$ — 131
8.4	Tropical intervals examples — 133
8.4.1	Non-negative pseudo-intervals dioid $(\mathcal{P}_1^{\text{int}}, +, \times)$ — 133
8.4.2	Pseudo-intervals pre-semi-ring and pre-dioid $(\mathcal{P}_2^{\text{int}}, \text{conv} \circ \cup, +)$ — 133
8.4.3	Pseudo-intervals idempotent dioid $(\mathbb{IR}, \text{conv} \circ \cup, +)$ — 134
9	Tropical inclusion functions — 135
9.1	Introduction — 135
9.1.1	Motivation — 135
9.1.2	Data dependencies — 135
9.2	Inclusion functions — 135
9.2.1	Transfer diagrams — 135
9.2.2	Example — 136
9.3	Function transfer — 137
10	Tropical probabilist set inversion — 139
10.1	Motivations — 139
10.2	Set inversion — 139
10.3	Probabilistic set inversion — 140
10.3.1	Scheme — 140
10.3.2	Numerical examples — 141
10.3.3	Computational time — 141

Part IV: **Some applications of tropical mathematics in theoretical physics**

- 11 Numerical applications with tropical intervals — 149**
- 12 Tropical transforms for theoretical physics — 150**
 - 12.1 Informations encoding & functions transforms — 150
 - 12.2 Legendre–Fenchel transform — 151
 - 12.2.1 Construction — 151
 - 12.2.2 Properties — 152
 - 12.2.3 Fast Legendre–Fenchel transform — 153
 - 12.3 Multi-dimensional Legendre–Fenchel transform — 153
 - 12.4 Cramér transform and entropy — 154
 - 12.4.1 Large deviations — 154
 - 12.4.2 Entropy — 155
 - 12.5 Tropical mathematics in statistical and quantum field theories — 156
 - 12.5.1 Statistical physics — 156
 - 12.5.2 Statistical and quantum field theories — 157
 - 12.5.3 Phases transitions — 158
- 13 Contributions of tropical mathematics to statistical physics — 159**
 - 13.1 Thermodynamic potentials — 159
 - 13.1.1 Construction of thermodynamic potentials — 159
 - 13.1.2 Thermodynamic equilibrium — 160
 - 13.2 Legendre–Fenchel transform for many-variables thermodynamic potentials — 162
- 14 $(\min, +)$ -Path integral — 163**
 - 14.1 Introduction — 163
 - 14.2 Euler–Lagrange action *versus* Hamilton–Jacobi action — 164
 - 14.3 $(\min, +)$ -Path integral and semi-classical limit — 170
 - 14.3.1 $(\min, +)$ Action path integral — 170
 - 14.3.2 Semi-classical convergence — 172
 - 14.4 Semi-classical trajectories — 174
- 15 Tropical complex variational calculus — 175**
 - 15.1 Introduction — 175
 - 15.2 Complex variational calculus — 176
 - 15.2.1 Complex-valued function minimum — 176
 - 15.2.2 Complex Hamilton–Jacobi equations — 178
 - 15.3 Lagrangian fields — 178
 - 15.4 Applications to the Born–Infeld theory — 179

15.4.1 Tensorial and Lagrangian density formalism in electro-magnetism — **180**
15.4.2 Born–Infeld non-linear equations — **181**
15.5 Conclusion & perspectives — **183**

Postface — 185

A Tropical intervals numerical implementation — 187

A.1 Arithmetic implementation in Python — **187**
A.2 Minkowski *versus* tropical arithmetic — **188**

B Tropical probabilist set inversion — 191

B.1 One-dimensional example — **191**
B.2 Higher-dimensional examples — **192**

C Tropical intervals functions optimization examples — 197

C.1 Fixed-step gradient descent method — **197**
C.2 Newton–Raphson method — **198**

D Tropical intervals linear algebra examples — 203

D.1 Matrix diagonalization — **203**
D.2 Matrix inversion — **204**

Bibliography — 209

Index — 219
