

# Contents

Preface — VII

Overview — XV

## Part I: Background information on locally compact groups

Introduction — 3

### 1 Locally compact spaces and groups — 5

- 1.1 The presence of many compact open subgroups — 5
- 1.2 The hyperspace of closed subgroups  $SUB(G)$  of  $G$  — 9
- 1.2.1 The Chabauty space of a compactly ruled group — 11
- 1.3 Semidirect products — 13

### 2 Periodic locally compact groups and their Sylow theory — 19

- 2.1 Normal  $\sigma$ -subgroups — 22
- 2.2 Normal  $\sigma$ -Sylow subgroups — 25
- 2.3 A Schur–Zassenhaus theorem — 26
- 2.4 The fixed point theorem — 33
- 2.5 Pairwise commuting  $p$ -Sylow subgroups — 38
- 2.6 Sylow bases in inductively prosolvable groups — 43

### 3 Abelian periodic groups — 47

- 3.1 Braconnier's theorem — 47
- 3.2 Preliminaries about the  $p$ -rank — 50
- 3.3 Locally compact abelian torsion groups — 52
- 3.3.1 A nonsplit extension of a reduced locally compact abelian  $p$ -group by  $\mathbb{Q}_p$  — 55
- 3.4 Purity used partially — 67
- 3.5 Locally compact abelian divisible groups — 69
- 3.6 Torsion-freeness and divisibility in  $p$ -groups — 72
- 3.6.1 Splitting in torsion-free  $p$ -groups — 78
- 3.6.2 The largest divisible subgroup — 79
- 3.7 Dense divisible subgroups — 83
- 3.8 Nonsplitting of  $\mathbb{Q}_p$  in the presence of torsion — 86
- 3.9 Divisible torsion groups — 91
- 3.10 The  $p$ -rank of a locally compact abelian  $p$ -group — 93
- 3.11 Structure of locally compact  $p$ -groups of finite  $p$ -rank — 96

- 4      Scalar automorphisms and the mastergraph — 101**
  - 4.1      On scalar automorphisms — 103
  - 4.1.1    The structure of  $\mathbb{Z}_p$  for  $p \neq 2$  — 105
  - 4.1.2    The structure of  $\mathbb{Z}_2$  — 108
  - 4.2      The structure of the group of scalar automorphisms — 110
  - 4.3      A bipartite graph for scalar action on a periodic locally compact abelian group — 114
  - 4.3.1    Geometric properties of the mastergraph — 115
  - 4.3.2    The structure of  $\bar{\mathbb{Z}}^\times$  and the prime mastergraph — 116
  - 4.3.3    The Sylow decomposition of  $\mathbb{Z}(n)^\times$  indexed by  $\mathcal{G}$  — 118
  - 4.3.4    The structure of  $\text{SAut}(A)$  and its prime graph  $\mathcal{G}(A)$  — 119
  - 4.3.5    The structure of a scalar action and its prime graph — 121
  
- 5      Inductively monothetic groups — 127**
  - 5.1      Classifying inductively monothetic subgroups — 128
  - 5.1.1    The build-up of  $\Pi$ -procylic groups from open procylic subgroups — 130
  - 5.1.2    Inductively monothetic groups and divisibility — 131
  - 5.2      The subspace of inductively monothetic subgroups — 137
  - 5.3      On divisibility and  $\mathbb{Z}_p$  — 138
  - 5.4      The extensions of a locally compact group by a  $\Pi$ -procylic group — 139

**Part II: Near abelian groups**

**Introduction — 149**

- 6      The definition of near abelian groups — 151**
  - 6.1      Basic definitions — 151
  
- 7      Important consequences of the definitions — 157**
  - 7.1      Periodicity of near abelian groups — 157
  - 7.2      Near abelian  $p$ -groups — 159
  - 7.3      Nontrivial near abelian groups — 160
  - 7.4      A first glance at the Sylow theory of periodic near abelian groups — 163
  - 7.5      The existence of scaling subgroups — 167
  - 7.6      Singular near abelian groups — 176
  
- 8      Trivial near abelian groups — 179**
  - 8.1      The subset  $B(G)$  in a trivial near abelian group — 182
  - 8.2      General structure of trivial near abelian groups — 186

- 9 The class of near abelian groups — 191**
  - 9.1 Closed subgroups — 191
  - 9.2 Quotient groups — 193
  - 9.3 Projective limits — 194
  - 9.4 Inductive limits — 196
- 10 The Sylow structure of periodic nontrivial near abelian groups and their prime graphs — 203**
  - 10.1 More on the Sylow structure of  $C_G(A)$  — 212
  - 10.2 Describing  $G_D$  for a periodic  $A$ -nontrivial near abelian group — 216
  - 10.3 The algebraic commutator group of a periodic near abelian group — 217
- 11 A list of examples — 219**

## Part III: Applications

### Introduction — 227

- 12 Classifying topologically quasihamiltonian groups — 229**
  - 12.1 Generalities — 229
  - 12.2 The  $p$ -group case — 231
  - 12.3 The periodic case — 233
  - 12.4 The nonperiodic case — 235
- 13 Locally compact groups with a modular subgroup lattice — 241**
  - 13.1 Generalities — 241
  - 13.2 The  $p$ -group case — 245
    - 13.2.1 Abelian  $p$ -groups — 245
    - 13.2.2 Nonperiodic locally compact abelian groups — 249
  - 13.3 Iwasawa  $(p, q)$ -factors — 249
  - 13.4 The periodic case — 252
  - 13.5 A summary of periodic locally compact topological  $M$ -groups — 257
  - 13.6 The nonperiodic case — 259
- 14 Strongly topologically quasihamiltonian groups — 263**
  - 14.1 Historical background — 263
  - 14.2 More notation — 264
  - 14.3 Generalities — 264
  - 14.4 The abelian case — 265
    - 14.4.1 The Abelian  $p$ -group case — 266

**XIV — Contents**

- 14.4.2      Classifying periodic abelian groups — **271**
- 14.5        The nonabelian situation — **274**
- 14.5.1     The periodic case — **274**
- 14.5.2     The nonperiodic case — **283**

**Bibliography — 289**

**List of symbols — 295**

**Index — 297**
