

Foreword: No sustainability without resource efficiency Winfried Kretschmann	V
Statements of the alliance partners	
An opportunity for industry and the environment Franz Untersteller	VII
100 examples of resource efficiency Wolfgang Wolf	VII
A matter of course in the chemical industry Thomas Mayer	VIII
Excellence in machine and plant construction Dietrich Birk	VIII
Many hidden champions in our state Steffen Auer	IX
Resource efficiency: A strategic necessity Robert Schöttle	IX
Introduction: Raw materials are indispensable for mankind Mario Schmidt	XI

Part I

Introduction to the topic	
1 Resource efficiency in industrial society	2
Background	3
Economic and political development	7
Annex to the Leaders' Declaration G7 Summit, 7–8 June 2015	10
Definition of terms according to VDI standard 4800	13
Goals of resource efficiency	16
2 Approaches to operational resource efficiency	26
The company as part of the big picture	27
Possible measures at a glance	32
A more detailed look at the measures	34
3 Methods and Instruments	38
Analysis methods for resource efficiency	39
Analysis methods for energy efficiency	43

Part I

Further aspects of resource efficiency

4 The Environmental Technology Roadmap and how it relates to resource efficiency	45
Background to the roadmap study	46
Trends in the lead market for circular economy that relate to resource efficiency	48
Category C: Waste recycling	49
Category B: Waste collection, transport and separation	50
Category Ü: General trends	50
Trends in the lead market for water that relate to resource efficiency	51
Category A: Wastewater treatment	52
Category Ü: General trends in water treatment	53
Trends in the lead market for air that relate to resource efficiency	54
Category A: Exhaust air purification and measurement	55
Category Ü: General trends	55
Future prospects	57
5 Lean production and resource efficiency	58
Introduction	59
Muda – waste	59
Bridging the gap to resource efficiency	61
Learning from lean production	61
6 Efficiency, resources and the rebound effect	66
The concept of efficiency	67
How do you measure resource consumption?	68
Raw material tonne calculation ...	69
The Rebound Effect	70
The project and its results	
7 The 100 Companies Project	76
The initiative 100 Companies for Resource Efficiency	78
8 Evaluation of the case studies	82
Characterisation of the selected companies	83
Regional distribution of companies	86
Efficiency gains in the selected case studies	90
Characterisation of efficiency measures	91
Cooperation and Consulting	95
Conclusion and Prospects	96
9 Resource efficiency and climate protection	97

Part II – Best practice cases from producing companies

Mining and quarrying

Processing of unsaleable pre-screen material by dry washing Eduard Merkle GmbH & Co. KG – Michelreibershalde quarry, Blaubeuren-Altental	102
Wet classification instead of disposal via landfills Heinrich Feess GmbH & Co. KG, Kirchheim unter Teck	106

Food industry

Very well stirred Alfred Ritter GmbH & Co. KG, Waldenbuch	110
MFCA for higher resource efficiency in apple cider vinegar production Friedrich Feldmann GmbH & Co. KG, Karlsruhe	114
Whey as energy source for the first energy neutral cheese dairy Käserei Monte Ziego, Teningen	118

Textile industry

Recot ² ® – spinning process for recycled cotton Gebrüder Otto GmbH & Co. KG, Dietenheim	122
Material flow cost accounting in variant production Junker-Filter GmbH, Sinsheim	126
Filtered, energetic resource efficiency Junker-Filter GmbH, Sinsheim	130
Resource efficiency through employee competence Laupheimer Kokosweberei GmbH & Co. KG (LAKO), Laupheim	134
SMART-TEX SATEMA - Corporate Fashion GmbH, Reutlingen	138
Efficiency has its price – savings through higher purchase price SWU Special Yarns GmbH & Co. KG, Waldkirch	142

Part II – Best practice cases from producing companies

Wood industry

Heat recovery concept for drying bark mulch as fuel Finkbeiner KG, Triberg	146
Resource efficiency for existing windows in listed buildings Holzmanufaktur Rottweil GmbH, Rottweil	150
Resource-saving production of wooden stepladders KRÄMER GmbH, Metzingen	154

Paper industry

Membrane bioreactor for wastewater reduction in the paper industry Albert Köhler GmbH & Co. KG, Gengenbach	158
New printing technology applied to cardboard August Faller GmbH & Co. KG, Waldkirch and Heidelberger Druckmaschinen AG, Heidelberg	162
Mirror, mirror on the wall Gaster Wellpappe GmbH & Co. KG, Pfaffengrund Plant, Heidelberg	166

Chemical industry

Every gram counts – Demand-driven production at DRACHOLIN DRACHOLIN GmbH, Metzingen	170
Clean more with less: VOC-compliant container cleaning Emil Frei GmbH & Co. KG, Bräunlingen	174
New hydrogen network reduces CO ₂ emissions Evonik Industries AG, Rheinfelden	178
Using waste condensate as a material and for energy – a contribution to sustainability FUCHS SCHMIERSTOFFE GMBH, Mannheim	182
Environmentally friendly coating using foil coating technology Karl Wörwag Lack- und Farbenfabrik GmbH & Co. KG, Stuttgart	186
Phenol recovery from wastewater LANXESS Deutschland GmbH, Mannheim	190
Cube it Simple – Packaging alternative for flooring installation products Uzin Utz AG, Ulm	194
Reduced raw material losses and more precision through automated dosing Zeller + Gmelin GmbH & Co. KG, Printing Inks Division, Eislingen/Fils	198

Part II – Best practice cases from producing companies

Pharmaceutical industry

Light without shadow – Feedback through software-controlled lighting Boehringer Ingelheim Pharma GmbH & Co. KG, Biberach an der Riß	202
Continuous Manufacturing Technology – a new process flow in sustainable drug production Pfizer Manufacturing Deutschland GmbH, Freiburg	206
Optimisation of the wastewater treatment plant Teva Germany, Ulm	210

Rubber and plastics industry

Thin-wall technology in technical plastic injection moulding Hans Fleig GmbH, Lahr	214
Closed material cycle Joma-Polytec GmbH, Bodelshausen	218
Rubber mats made from recycled used tyres matteco GmbH, Kappelrodeck	222
Energy and resource efficiency through multiple use of high-quality raw materials puren gmbh, Überlingen	226

Manufacture of glass and ceramics

Resource efficiency in premium design thanks to newly developed, innovative material Duravit AG, Research and Development, Hornberg	230
---	-----

Non-metallic mineral product manufatcuring

Conservation of gravel resources – Concrete made with recycled aggregate Holcim Kies und Beton GmbH, Stuttgart	234
--	-----

Part II – Best practice cases from producing companies

Metal processing industry

An intelligent heat pump system keeps air clean and conserves resources Albert Rechtenbacher GmbH, Bopfingen am Ipf	238
Regranulator for plastic waste Brugger GmbH, Hardt	242
Investigation and evaluation of optimisation measures with the help of material flow cost accounting C&C Bark Metalldruckguss und Formenbau GmbH, Schömborg	246
Sprue reduction in hot chamber die casting of magnesium alloys C&C Bark Metalldruckguss und Formenbau GmbH, Schömborg, Oskar Frech GmbH + Co. KG, Schorndorf and Festool GmbH, Wendlingen	250
Waste-free rolling and forming process for the production of high temperature resistant formed metal ring gaskets ElingKlinger AG, Dettingen/Erms	254
From manual work to series production – resource optimisation by coupling two CNC processing centres to an automated access pallet warehouse Erwin Wimmer GmbH, Abstatt	258
Optimisation of machine tools – new routes to resource efficiency EZU-Metallwaren GmbH & Co. KG, Königsheim	262
Oil purification reduces costs and resource consumption fischerwerke GmbH & Co. KG, Waldachtal	266
Sustainable investment in shuttle technology fischerwerke GmbH & Co. KG, Waldachtal	270
Optimisation of material efficiency in the production of wire race bearings Franke GmbH, Aalen	274
MIA – Material and Information Flow Analysis Grieshaber GmbH & Co. KG, Schiltach/Black Forest	278
Resource-efficient production of mechanical fasteners HEWI G. Winker GmbH & Co. KG, Spaichingen	282
High temperature waste heat recovery from hardening furnaces IMS Gear SE & Co. KGaA, Donaueschingen and HEMO GmbH, Ötisheim	286
Profiled material efficiency Protektorwerk Florenz Maisch GmbH, Gaggenau	290
Integrated production control model for material and energy savings Rieber GmbH & Co. KG, Reutlingen	294

Part II – Best practice cases from producing companies

Metal processing industry

Increased resource efficiency with new laser processing machines from Trumpf Roland Deeg GmbH, Kirchberg/Jagst, Energiewelt-info GmbH, Bad Mergentheim and TRUMPF GmbH + Co. KG, Ditzingen	298
Re-use of machinery and equipment Robert Bosch GmbH, Stuttgart-Feuerbach	302
Hybrid component manufacturing – combining forging and metal 3D printing Rosswag GmbH, Rosswag Engineering, Pfinztal	306
Automatic press shutdown SCHEUERMANN + HEILIG GmbH, Buchen-Hainstadt	310
Implementation of a highly efficient heat treatment line Schwäbische Härtetechnik Ulm GmbH & Co. KG (SHU), Ulm	314
Tolerance compensation elements, an example of resource efficiency through product development Springfix Befestigungstechnik GmbH, Salach	318
The new tsf dipping room: making a production process more efficient, environmentally friendly and employee-friendly tsf Tübinger Stahlfeinguss Franz Stadtler GmbH & Co. KG, Tübingen	322
Avoiding losses in added value through integrated material efficiency Wezel GmbH Kaltumform-Technik, Frickenhausen	326
Increasing the efficiency of a re-cooling plant Wieland-Werke AG, Ulm and Wieland Anlagentechnik GmbH, Neu-Ulm	330
Spiral welding process Witzenmann GmbH, Pforzheim	334

Precision mechanics industry

Efficient production of safety screws thanks to sprue recycling OBE Ohnmacht & Baumgärtner GmbH & Co. KG, Ispringen	338
REProMag – Resource-efficient production of magnets OBE Ohnmacht & Baumgärtner GmbH & Co. KG, Ispringen	342

Manufacture of measuring and control instruments

Reconditioning of water meters – from one-off measure to an integrated business concept Lorenz GmbH & Co. KG, Schelklingen-Ingstetten	346
--	-----

Part II – Best practice cases from producing companies

Software development

Sustainable office building – ecology + economy + employee friendliness Vector Informatik GmbH, Stuttgart	350
---	-----

Electrical industry

Resource efficiency through lubricant recycling ABB STOTZ-KONTAKT GmbH, Heidelberg	354
Resource minimisation through partial automation ANSMANN AG, Assamstadt	358
Energy-efficient production facility and its central energy supply ebm-papst Mulfingen GmbH & Co. KG, Hollenbach	362
EEP and EEP ² – Energy efficiency at the Siemens Industrial Park in Karlsruhe and Siemens' Rastatt plant Siemens AG – Building Technologies, Stuttgart	366
Consistent, sustainable use of process heat WERMA Signaltechnik GmbH + Co. KG, Rietheim-Weilheim	370
Optimised energy and data transmission via slip rings WIKA Mobile Control GmbH & Co. KG, Ettlingen	374
Etching agent recycling and copper recovery in an alkaline etching line Würth Elektronik GmbH & Co. KG / Circuit Board Technology (CBT), Niedernhall	378

Machinery

Energy efficiency and cost savings through waste heat reduction in plastics processing ANDREAS STIHL AG & Co. KG, Waiblingen	382
The Development of a Cable Drive with Synthetic Cable Drums for Machines Used in Water Intake Systems Aqseptence Group GmbH, Karlsruhe	386
From cutting to cold forming Felss Group GmbH, Königsbach-Stein and Bretten-Gölshausen	390
Integrated resource efficiency in factory planning and operation Festo AG & Co. KG, Scharnhausen Technology Plant	394
Direct processing from fibre to fibre moulded part Fiber Engineering GmbH, Karlsruhe	398

Part II – Best practice cases from producing companies

Machinery

New sensor-based control of cascade rinsing baths in coating technology John Deere GmbH & Co. KG, Bruchsal	402
Resource efficiency through addition – additive lightweight construction for industry 4.0 Jomatik GmbH, Tübingen	406
Resource and energy efficient product development with the help of bw!MFCA software Keller Lufttechnik GmbH + Co. KG, Kirchheim unter Teck	410
Free heat – Saving energy by using waste heat from compressed air stations Kurt Kauffmann Technische Federn GmbH, Weinstadt-Beutelsbach and ALMiG Kompressoren GmbH, Köngen	414
Energy-efficient refurbishment of technical building services Mayer & Cie. GmbH & Co. KG, Albstadt-Tailfingen	418
Resource-saving packaging process: our demand is driving innovation! Mosca GmbH, Waldbrunn	422
Robot-assisted automation increases flexibility SFA mechanische Fertigung / Sondermaschinenbau GmbH & Co. KG, Aichstetten	426
Simply switch off specific systems – energy value stream analysis makes machine tools more efficient Voith GmbH & Co. KGaA, Heidenheim	430
A learning organisation reduces material losses Wiedenmann GmbH, Rammingen	434

Automotive Industry

Resistance spot welding made easy AUDI AG, Neckarsulm	438
Energy-efficient compressed air in a shipping container Cooper Standard Automotive GmbH, Schelklingen and Mader GmbH & Co. KG, Leinfelden-Echterdingen	442
Innovative dry separation for spray coatings Daimler AG, Gaggenau	446
Ignition current limiter replaces the backup battery concept Daimler AG, Sindelfingen	450

Part II – Best practice cases from producing companies

Automotive Industry

NANOSLIDE® process chain Daimler AG, Stuttgart and Gebr. Heller Maschinenfabrik GmbH, Nürtingen	454
Systematic improvement in energy efficiency of ventilation systems EvoBus GmbH, Mannheim	458
Less is more – optimising operating modes in the paint shop Dr. Ing. h.c. F. Porsche AG, Zuffenhausen	462
Using dryer waste heat to save energy Dr. Ing. h.c. F. Porsche AG, Zuffenhausen	466
Resource efficiency under high pressure – servo drive presses voestalpine Automotive Components Dettingen GmbH, Dettingen an der Erms	470

Furniture industry

The perfect wave – Getting flax fibres and business processes into shape GETA mbH, Wangen-Niederwangen	474
Less is more – Optimisation by finite element method Interstuhl Büromöbel GmbH & Co. KG, Meßstetten-Tieringen	478

Medical technology

Reduction of carbide consumption through real-time control ulrich GmbH & Co. KG (ulrich medical), Ulm and Schülerforschungszentrum Südwürttemberg (SFZ), Bad Saulgau	482
--	-----

Manufacture of other goods

Introduction of a cutting system for optimising the cutting of trampoline components Eurotramp-Trampoline Kurt Hack GmbH, Weilheim/Teck	486
NOA! Noch Optimalere Abläufe! (Even greater process optimisation!) NOCH GmbH & Co. KG, Wangen im Allgäu	490

Part II – Best practice cases from producing companies

Energy supply

Process waste heat from the refinery for district heating supply in Karlsruhe Mineraloelraffinerie Oberrhein GmbH & Co. KG (MiRO) and Stadtwerke Karlsruhe GmbH, Karlsruhe	494
--	-----

OptiMa – Energy efficiency in the Mannheim combined heat and power (CHP) plant MVV Umwelt GmbH, Mannheim	498
--	-----

Recycling industry

Development of systems and technology for aircraft engine and landing gear recycling in Baden-Württemberg CRONIMET Ferroleg. GmbH, Karlsruhe	502
---	-----

Alternative fuel for the cement industry ELM Recycling GmbH & Co. KG, Heidenheim-Mergelstetten	506
--	-----

Construction industry

Liquid soil from recycled material – stationary and mobile production SOILTEC GmbH & Co. KG, Ulm	510
--	-----
