Foreword *xi*

Part I Asymmetric Activation of C(sp³)—H Bonds *1*

Part I.A C(sp³)—H Bond Insertion by Metal Carbenoids and Nitrenoids *2*

1	Stereoselective C—C Bond-Forming Reactions Through C(sp³)—H Bond Insertion of Metal Carbenoids	3
	<i>Aoife M. Buckley, Thomas A. Brouder, Alan Ford, and Anita R. Maguire</i>	
1.1	Introduction	3
1.2	Diazo Compounds	4
1.3	Mechanistic Understanding	5
1.4	Catalysts	7
1.4.1	Copper	7
1.4.1.1	Bisoxazoline and Schiff Base	7
1.4.2	Rhodium	8
1.4.2.1	Rhodium(II) Carboxylates	9
1.4.2.2	Rhodium(II) Carboxamidates	10
1.4.2.3	Ortho-metalated Complexes	11
1.4.3	Iridium and Ruthenium	11
1.5	Intramolecular C(sp ³)—H Bond Insertion	11
1.5.1	Chemoselectivity	13
1.5.1.1	Catalyst Effects	13
1.5.1.2	Substrate Effects	14
1.5.2	Regioselectivity	16
1.5.2.1	Formation of Three-Membered Rings	17
1.5.2.2	Formation of Four-Membered Rings	18
1.5.2.3	Formation of Five-Membered Rings	20
1.5.2.4	Formation of Six-Membered Rings	20
1.5.3	Diastereoselectivity	23
1.5.3.1	Substrate Effects	23
1.5.3.2	Catalyst Effects	25

1.5.4	Enantioselectivity	25
1.6	Intermolecular C(sp ³)—H Bond Insertion	30
1.6.1	Chemoselectivity	30
1.6.1.1	Diazo Compounds	32
1.6.1.2	Catalyst Effects	34
1.6.1.3	Substrate Functional Groups	35
1.6.2	Regioselectivity	36
1.6.2.1	Substrate Effects	36
1.6.2.2	Catalyst Effects	38
1.6.2.3	Diazo Compound Effects	39
1.6.3	Diastereoselectivity	39
1.6.3.1	Substrate Effects	39
1.6.3.2	Catalyst Effects	42
1.6.4	Enantioselectivity	43
1.7	Conclusion	45
	References	45
2	Stereoselective C—N Bond-Forming Reactions Through C(sp³)—H Bond Insertion of Metal Nitrenoids	51
	<i>Philippe Dauban, Romain Rey-Rodriguez, and Ali Nasrallah</i>	
2.1	Introduction	51
2.2	Historical Background	52
2.2.1	Seminal Studies in Catalytic C(sp ³)—H Amination	52
2.2.2	Mechanistic and Stereochemical Issues	56
2.3	Catalytic Stereoselective C(sp ³)—H Amination Reactions with Iminoiodinanes	60
2.3.1	Catalytic Intermolecular Enantioselective Reactions (Chirality Only on the Metal Complex)	60
2.3.2	Catalytic Intramolecular Enantioselective Reactions	63
2.3.3	Catalytic Intermolecular Diastereoselective Reactions (Chirality on the Metal Complex and the Nitrene Precursor)	66
2.4	Catalytic Stereoselective C(sp ³)—H Amination Reactions with Azides	67
2.4.1	Transition Metal-Catalyzed C(sp ³)—H Amination Reactions	67
2.4.2	Enzymatic C(sp ³)—H Amination Reactions	68
2.5	Catalytic Stereoselective C(sp ³)—H Amination Reactions with <i>N</i> -(Sulfonyloxy)carbamates	70
2.6	Conclusion	72
	References	72
	Part I.B C(sp³)—H Activation as Stereodiscriminant Step	77
3	Enantioselective Intra- and Intermolecular Couplings	79
	<i>Qiaoqiao Teng and Wei-Liang Duan</i>	
3.1	Introduction	79

3.2	Enantioselective Intramolecular Couplings of Aliphatic Substrates	79
3.2.1	C–C Coupling	79
3.2.2	C–X Coupling	89
3.3	Enantioselective Intermolecular Couplings of Aliphatic Substrates	90
3.3.1	Pd Catalysis	91
3.3.2	Rh Catalysis	102
3.3.3	Ir Catalysis	102
3.4	Conclusion	104
	References	105

4 Substrate-Controlled Transformation: Diastereoselective Functionalization 107

Sheng-Yi Yan, Bin Liu, and Bing-Feng Shi

4.1	Introduction	107
4.2	Diastereoselective Functionalizations of <i>N</i> -Phthaloyl- α -Amino Acids	108
4.2.1	Diastereoselective β -C(sp ³)-H Functionalizations of <i>N</i> -Phthaloyl- α -Amino Acids	108
4.2.1.1	Bidentate Directing Group	108
4.2.1.2	Monodentate Directing Group	114
4.2.2	Diastereoselective γ -C(sp ³)-H Functionalization of α -Amino Acid Derivatives	114
4.3	Diastereoselective C–H Activation Controlled by Chiral Auxiliary	116
4.4	Diastereoselective C(sp ³)-H Functionalization of Conformationally Restricted Cyclic Substrates	121
4.5	Summary and Conclusions	127
	References	128

Part II Stereoselective Synthesis Implying Activation of C(sp²)-H Bonds 131

5 Planar Chirality via C(sp²)-H Activation Involved in Stereodiscriminant Step 133

Qing Gu and Shu-Li You

5.1	Introduction	133
5.2	Diastereoselective Synthesis of Planar Chiral Ferrocenes	134
5.3	Enantioselective Synthesis of Planar Chiral Ferrocenes	134
5.3.1	Pd(II)-Catalyzed Direct C–H Bond Functionalization	134
5.3.2	Pd(0)-Catalyzed Direct C–H Bond Functionalization	140
5.3.3	Ir/Rh-Catalyzed Direct C–H Bond Functionalization	144
5.3.4	Au/Pt-Catalyzed Direct C–H Bond Functionalization	146
5.4	Conclusion	147
	References	148

6	Axial Chirality via C(sp²)-H Activation Involved in Stereodiscriminant Step	151
	<i>Quentin Dherbassy, Joanna Wencel-Delord, and Françoise Colobert</i>	
6.1	Introduction	151
6.2	Asymmetric Coupling of Two Arenes by Oxidative Dimerization	152
6.2.1	Copper-Catalyzed Reactions	153
6.2.2	Vanadium-Catalyzed Reactions	154
6.2.3	Iron-Catalyzed Reactions	155
6.2.4	Application in the Synthesis of Natural Products	155
6.2.5	Conclusion	156
6.3	Stereoselective C-H Functionalization of Prochiral or Racemic Biaryls	158
6.3.1	Asymmetric C-H Alkylation of Naphthylpyridines	158
6.3.2	Diastereoselective C-H Functionalization Using a Chiral Directing Group	159
6.3.2.1	Sulfinyl as Chiral Directing Group	159
6.3.2.2	Phosphates as Chiral Directing Group	162
6.3.3	Enantioselective C-H Functionalization of Racemic Biaryl	163
6.3.4	Stereoselective C-H Functionalization Using a Transient Chiral Directing Group	165
6.3.5	Conclusion	167
6.4	Atroposelective Cross-Coupling of Two Moieties	167
6.4.1	Pd-Catalyzed C-H Arylation of Thiophene Derivatives	167
6.4.2	Pd-Catalyzed C-H Arylation of Biaryl Sulfoxides	169
6.4.3	Rh-Catalyzed C-H Arylation of Diazonaphthoquinones	171
6.4.4	Conclusion	172
6.5	General Conclusion	172
	References	172
7	Central Chirality via Asymmetric C(sp²)-H Activation Implying Desymmetrization and Kinetic Resolution	175
	<i>Soufyan Jerhaoui, Françoise Colobert, and Joanna Wencel-Delord</i>	
7.1	Synthesis of C-Stereogenic Molecules via C(sp ²)-H Functionalization	175
7.1.1	Desymmetrization	175
7.1.2	Kinetic Resolution	182
7.2	Synthesis of P-Central Chiral Molecules via C(sp ²)-H Functionalization	183
7.3	Synthesis of Chiral Organosilicon Molecules via C(sp ²)-H Functionalization	187
7.4	Synthesis of S-Chiral Molecules via C(sp ²)-H Functionalization	189
7.5	Conclusions	190
	References	191

8 Non-stereoselective C(sp²)-H Activation Followed by Selective Functionalization of Metallacyclic Intermediate 193

Xiaohong Chen, Xue Gong, Bo Wang, and Guoyong Song

- 8.1 Introduction 193
- 8.2 Intramolecular Couplings 194
 - 8.2.1 Palladium and Nickel Catalysis 194
 - 8.2.2 Rhodium Catalysis 196
 - 8.2.3 Iridium Catalysis 200
 - 8.2.4 Enantioselective Hydroacylation 203
- 8.3 Intermolecular Couplings 210
 - 8.3.1 Rhodium Catalysis 210
 - 8.3.2 Iridium Catalysis 219
 - 8.3.3 Other Metal Catalysis 226
- 8.4 Conclusion 231
- Acknowledgments 231
- References 231

9 Diastereoselective Formation of Alkenes Through C(sp²)-H Bond Activation 239

Parthasarathy Gandeepan and Lutz Ackermann

- 9.1 Introduction 239
- 9.2 C-H Activation with Alkenes 241
 - 9.2.1 Nondirected C-H Alkenylation 241
 - 9.2.2 Directed C-H Alkenylation 244
- 9.3 C-H Activation with Alkenyl (Pseudo)halides 250
- 9.4 Hydroarylation 252
 - 9.4.1 Hydroarylation of Alkynes 252
 - 9.4.2 Hydroarylation of Allenes 257
- 9.5 Hydroacylation 261
 - 9.5.1 Hydroacylation of Alkynes 261
 - 9.5.2 Hydroacylation of Allenes 263
- 9.6 Conclusion 264
- References 265
