Preface *xv*

Acknowledgments *xix*

1 Introduction *1*

- 1.1 Optics in Modern Life *1*
- 1.2 The Origin and Progress of Quantum Optics *3*
- 1.3 Motivation Through Simple and Direct Teaching Experiments *7*
- 1.4 Consequences of Photon Correlations *12*
- 1.5 How to Use This Guide *14*
- References *16*

2 Classical Models of Light *19*

- 2.1 Classical Waves *20*
 - 2.1.1 Mathematical Description of Waves *20*
 - 2.1.2 The Gaussian Beam *21*
 - 2.1.3 Quadrature Amplitudes *24*
 - 2.1.4 Field Energy, Intensity, and Power *25*
 - 2.1.5 A Classical Mode of Light *26*
 - 2.1.6 Light Carries Information *28*
 - 2.1.7 Modulations *30*
- 2.2 Optical Modes and Degrees of Freedom *32*
 - 2.2.1 Lasers with Single and Multiple Modes *32*
 - 2.2.2 Polarization *33*
 - 2.2.2.1 Poincaré Sphere and Stokes Vectors *35*
 - 2.2.3 Multimode Systems *36*
- 2.3 Statistical Properties of Classical Light *37*
 - 2.3.1 The Origin of Fluctuations *37*
 - 2.3.1.1 Gaussian Noise Approximation *38*
 - 2.3.2 Noise Spectra *39*
 - 2.3.3 Coherence *40*
 - 2.3.3.1 Correlation Functions *44*
- 2.4 An Example: Light from a Chaotic Source as the Idealized Classical Case *46*
- 2.5 Spatial Information and Imaging *50*

2.5.1	State-of-the-Art Imaging	50
2.5.2	Classical Imaging	52
2.5.3	Image Detection	55
2.5.4	Scanning	56
2.5.5	Quantifying Noise and Contrast	58
2.5.6	Coincidence Imaging	59
2.5.7	Imaging with Coherent Light	60
2.5.8	Image Reconstruction with Structured Illumination	60
2.5.9	Image Analysis and Modes	61
2.5.10	Detection Modes and Displacement	61
2.6	Summary	62
	References	63
	Further Reading	64
3	Photons: The Motivation to Go Beyond Classical Optics	65
3.1	Detecting Light	65
3.2	The Concept of Photons	68
3.3	Light from a Thermal Source	70
3.4	Interference Experiments	73
3.5	Modelling Single-Photon Experiments	78
3.5.1	Polarization of a Single Photon	79
3.5.1.1	Some Mathematics	80
3.5.2	Polarization States	81
3.5.3	The Single-Photon Interferometer	83
3.6	Intensity Correlation, Bunching, and Anti-bunching	84
3.7	Observing Photons in Cavities	88
3.8	Summary	90
	References	90
	Further Reading	92
4	Quantum Models of Light	93
4.1	Quantization of Light	93
4.1.1	Some General Comments on Quantum Mechanics	93
4.1.2	Quantization of Cavity Modes	94
4.1.3	Quantized Energy	95
4.1.4	The Creation and Annihilation Operators	97
4.2	Quantum States of Light	97
4.2.1	Number or Fock States	97
4.2.2	Coherent States	99
4.2.3	Mixed States	101
4.3	Quantum Optical Representations	102
4.3.1	Quadrature Amplitude Operators	102
4.3.2	Probability and Quasi-probability Distributions	104
4.3.3	Photon Number Distributions	108
4.3.4	Covariance Matrix	111
4.3.4.1	Summary of Different Representations of Quantum States and Quantum Noise	112

4.4	Propagation and Detection of Quantum Optical Fields	113
4.4.1	Quantum Optical Modes in Free Space	114
4.4.2	Propagation in Quantum Optics	115
4.4.3	Detection in Quantum Optics	117
4.4.4	An Example: The Beamsplitter	118
4.5	Quantum Transfer Functions	120
4.5.1	A Linearized Quantum Noise Description	121
4.5.2	An Example: The Propagating Coherent State	123
4.5.3	Real Laser Beams	123
4.5.4	The Transfer of Operators, Signals, and Noise	124
4.5.5	Sideband Modes as Quantum States	126
4.5.6	Another Example: A Coherent State Pulse Through a Frequency Filter	129
4.5.7	Transformation of the Covariance Matrix	130
4.6	Quantum Correlations	131
4.6.1	Photon Correlations	131
4.6.2	Quadrature Correlations	132
4.6.3	Two-Mode Covariance Matrix	133
4.7	Summary	134
4.7.1	The Photon Number Basis	134
4.7.2	Quadrature Representations	135
4.7.3	Quantum Operators	135
4.7.4	The Quantum Noise Limit	136
	References	136
	Further Reading	137
5	Basic Optical Components	139
5.1	Beamsplitters	140
5.1.1	Classical Description of a Beamsplitter	140
5.1.1.1	Polarization Properties of Beamsplitters	142
5.1.2	The Beamsplitter in the Quantum Operator Model	143
5.1.3	The Beamsplitter with Single Photons	144
5.1.4	The Beamsplitter and the Photon Statistics	146
5.1.5	The Beamsplitter with Coherent States	149
5.1.5.1	Transfer Function for a Beamsplitter	149
5.1.6	Comparison Between a Beamsplitter and a Classical Current Junction	151
5.1.7	The Beamsplitter as a Model of Loss	152
5.2	Interferometers	153
5.2.1	Classical Description of an Interferometer	154
5.2.2	Quantum Model of the Interferometer	155
5.2.3	The Single-Photon Interferometer	156
5.2.4	Transfer of Intensity Noise Through the Interferometer	156
5.2.5	Sensitivity Limit of an Interferometer	157
5.2.6	Effect of Mode Mismatch on an Interferometer	160
5.3	Optical Cavities	162
5.3.1	Classical Description of a Linear Cavity	164

5.3.2	The Special Case of High Reflectivities	169
5.3.3	The Phase Response	170
5.3.4	Spatial Properties of Cavities	172
5.3.4.1	Mode Matching	172
5.3.4.2	Polarization	174
5.3.4.3	Tunable Mirrors	175
5.3.5	Equations of Motion for the Cavity Mode	175
5.3.6	The Quantum Equations of Motion for a Cavity	176
5.3.7	The Propagation of Fluctuations Through the Cavity	177
5.3.8	Single Photons Through a Cavity	180
5.3.9	Multimode Cavities	181
5.3.10	Engineering Beamsplitters, Interferometers, and Resonators	182
5.4	Other Optical Components	184
5.4.1	Lenses	184
5.4.2	Holograms and Metasurfaces	185
5.4.3	Crystals and Polarizers	187
5.4.4	Optical Fibres and Waveguides	188
5.4.5	Modulators	189
5.4.5.1	Phase and Amplitude Modulators	191
5.4.6	Spatial Light Modulators	193
5.4.7	Optical Noise Sources	195
5.4.8	Non-linear Processes	195
	References	196
6	Lasers and Amplifiers	199
6.1	The Laser Concept	199
6.1.1	Technical Specifications of a Laser	201
6.1.2	Rate Equations	203
6.1.3	Quantum Model of a Laser	207
6.1.4	Examples of Lasers	209
6.1.4.1	Classes of Lasers	209
6.1.4.2	Dye Lasers and Argon Ion Lasers	209
6.1.4.3	The CW Nd:YAG Laser	210
6.1.4.4	Diode Lasers	213
6.1.4.5	Limits of the Single-Mode Approximation in Diode Lasers	213
6.1.5	Laser Phase Noise	214
6.1.6	Pulsed Lasers	215
6.2	Amplification of Optical Signals	215
6.3	Parametric Amplifiers and Oscillators	218
6.3.1	The Second-Order Non-linearity	219
6.3.2	Parametric Amplification	220
6.3.3	Optical Parametric Oscillator	221
6.3.3.1	Noise Spectrum of the Parametric Oscillator	222
6.3.4	Pair Production	223
6.4	Measurement-Based Amplifiers	224
6.4.1	Deterministic Measurement-Based Amplifiers	225
6.4.2	Heralded Measurement-Based Amplifiers	228

6.5	Summary	230
	References	231
7	Photon Generation and Detection	233
7.1	Photon Sources	236
7.1.1	Deterministic Photon Sources	239
7.2	Photon Detection	240
7.2.1	Detecting Individual Photons	240
7.2.1.1	Photochemical Detectors	241
7.2.1.2	Photoelectric Detectors	241
7.2.1.3	Photo-thermal Detectors	243
7.2.1.4	Multipixel and Imaging Devices	243
7.2.2	Recording Electrical Signals from Individual Photons	245
7.3	Generating, Detecting, and Analysing Photocurrents	247
7.3.1	Properties of Photocurrents	247
7.3.1.1	Beat Measurements	247
7.3.1.2	Intensity Noise and the Shot Noise Level	248
7.3.1.3	Quantum Efficiency	249
7.3.1.4	Photodetector Materials	250
7.3.2	Generating Photocurrents	251
7.3.2.1	Photodiodes and Detector Circuit	251
7.3.2.2	Amplifiers and Electronic Noise	252
7.3.2.3	Detector Saturation	254
7.3.3	Recording of Photocurrents	255
7.3.4	Spectral Analysis of Photocurrents	257
7.3.4.1	Digital Fourier Transform	257
7.3.4.2	Analogue Fourier Transform	258
7.3.4.3	From Optical Sidebands to the Current Spectrum	258
7.3.4.4	The Operation of an Electronic Spectrum Analyser	259
7.3.4.5	Detecting Signal and Noise Independently	260
7.3.4.6	The Decibel Scale	261
7.3.4.7	Adding Electronic AC Signals	262
7.4	Imaging with Photons	263
	References	264
	Further Reading	267
8	Quantum Noise: Basic Measurements and Techniques	269
8.1	Detection and Calibration of Quantum Noise	269
8.1.1	Direct Detection and Calibration	269
8.1.1.1	White Light Calibration	273
8.1.2	Balanced Detection	273
8.1.3	Detection of Intensity Modulation and SNR	275
8.1.4	Homodyne Detection	275
8.1.4.1	The Homodyne Detector for Classical Waves	275
8.1.5	Heterodyne Detection	279
8.1.5.1	Measuring Other Properties	280
8.2	Intensity Noise	281

8.2.1	Laser Noise	281
8.3	The Intensity Noise Eater	282
8.3.1	Classical Intensity Control	282
8.3.2	Quantum Noise Control	285
8.3.2.1	Practical Consequences	289
8.4	Frequency Stabilization and Locking of Cavities	290
8.4.1	Pound–Drever–Hall Locking	292
8.4.2	Tilt Locking	293
8.4.3	The PID Controller	294
8.4.4	How to Mount a Mirror	295
8.4.5	The Extremes of Mirror Suspension: GW Detectors	296
8.5	Injection Locking	296
	References	299
9	Squeezed Light	303
9.1	The Concept of Squeezing	303
9.1.1	Tools for Squeezing: Two Simple Examples	303
9.1.1.1	The Kerr Effect	304
9.1.1.2	Four-Wave Mixing	307
9.1.2	Properties of Squeezed States	310
9.1.2.1	What Are the Uses of These Various Types of Squeezed Light?	312
9.2	Quantum Model of Squeezed States	314
9.2.1	The Formal Definition of a Squeezed State	314
9.2.2	The Generation of Squeezed States	317
9.2.3	Squeezing as Correlations Between Noise Sidebands	319
9.3	Detecting Squeezed Light	322
9.3.1	Detecting Amplitude Squeezed Light	322
9.3.2	Detecting Quadrature Squeezed Light	322
9.3.3	Using a Cavity to Measure Quadrature Squeezing	324
9.3.4	Summary of Different Representations of Squeezed States	325
9.3.5	Propagation of Squeezed Light	325
9.4	Early Demonstrations of Squeezed Light	330
9.4.1	Four Wave Mixing	330
9.4.2	Optical Parametric Processes	333
9.4.3	Second Harmonic Generation	339
9.4.4	The Kerr Effect	343
9.4.4.1	The Response of the Kerr Medium	343
9.4.4.2	Optimizing the Kerr Effect	345
9.4.4.3	Fibre Kerr Squeezing	346
9.4.4.4	Atomic Kerr Squeezing	348
9.4.4.5	Atomic Polarization Self-Rotation	349
9.5	Pulsed Squeezing	349
9.5.1	Quantum Noise of Optical Pulses	349
9.5.2	Pulsed Squeezing Experiments with Kerr Media	352
9.5.3	Pulsed SHG and OPO Experiments	353
9.5.4	Soliton Squeezing	354
9.5.5	Spectral Filtering	355

9.5.6	Non-linear Interferometers	356
9.6	Amplitude Squeezed Light from Diode Lasers	358
9.7	Quantum State Tomography	360
9.8	State of the Art of CW Squeezing	363
9.9	Squeezing of Multiple Modes	365
9.9.1	Twin-Photon Beams	365
9.9.2	Polarization Squeezing	367
9.9.3	Degenerate Multimode Squeezers	368
9.10	Summary: Quantum Limits and Enhancement	370
	References	371
	Further Reading	376
10	Applications of Quantum Light	377
10.1	Quantum Enhanced Sensors	377
10.1.1	Coherent Sensors and Sensitivity Scaling	377
10.1.2	Practical Examples of Sensors	380
10.1.3	Ultimate Sensing Limits	382
10.1.4	Adaptive Phase Estimation	384
10.2	Optical Communication	384
10.3	Gravitational Wave Detection	389
10.3.1	The Origin and Properties of GW	389
10.3.1.1	Concept and Design of an Optical GW Detector	392
10.3.2	Quantum Properties of the Ideal Interferometer	393
10.3.2.1	Configurations of Interferometers	396
10.3.2.2	Recycling	397
10.3.2.3	Modulation Techniques	398
10.3.3	The Sensitivity of GW Observatories	400
10.3.3.1	Enhancement Below the SQL	402
10.3.4	Interferometry with Squeezed Light	405
10.3.4.1	Quantum Enhancement Beyond the SQL	410
10.4	Quantum Enhanced Imaging	411
10.4.1	Imaging with Photons on Demand	411
10.4.2	Quantum Enhanced Coincidence Imaging	412
10.5	Multimode Squeezing Enhancing Sensors	414
10.5.1	Spatial Multimode Squeezing	414
