Contents

Preface *xiii*
Nomenclature *xv*

Part I Reactor Analysis, Design, and Scale-up *1*

1 Nonideal Flow *3*
1.1 Introduction *3*
1.2 Residence Time Distribution (RTD) Function *3*
1.2.1 Measurement of the RTD *4*
1.2.1.1 Pulse Input *4*
1.2.1.2 Step Input *6*
1.2.2 RTD Concept in Heterogeneous Systems *7*
1.2.3 Characteristics of RTD *8*
1.2.3.1 Mean Residence Time *9*
1.2.3.2 Second and Third Moments of the RTD *10*
1.3 RTD in Ideal Reactors *11*
1.3.1 RTD of the Batch and PFR Reactors *11*
1.3.2 RTD of an ideal CSTR *12*
1.3.3 RTD of PFR/CSTR in Series *13*
1.4 Modeling the Reactor with the RTD *15*
1.4.1 Models with One Parameter: Tanks-in-series and Dispersion Models *15*
1.4.1.1 Tanks-in-series Model *15*
1.4.1.2 The Dispersion Model *18*
1.4.2 Models with Two Parameters *22*
1.4.2.1 Two CSTR with Exchange of Matter *22*
1.4.2.2 CSTR with Dead Volume and Short Circuit *23*
1.5 Other Models of Real Reactors Using CSTR and PFR *25*
Bibliography *32*

2 Convolution and Deconvolution of Residence Time Distribution Curves in Reactors *35*
2.1 Introduction *35*

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

2.2 Convolution *35*
2.2.1 Convolution Properties *37*
2.2.2 Application to a Reactor RTD *38*
2.2.3 Calculating Convolution Functions *38*
2.3 Deconvolution *41*
2.4 Computer Program Using Matlab® (Convolution) *44*
2.5 Computer Program Using MATLAB (Deconvolution) *47*
2.6 Convolution of Signals in Reactors Connected in Series *50*
Bibliography *55*

3 Use of Transfer Function for Convolution and Deconvolution of Complex Reactor Systems *57*
3.1 Introduction *57*
3.2 Definition and Properties of the Transfer Function *57*
3.3 Laplace Transform *58*
3.3.1 Laplace Transform of Some Important Functions for Reactor Characterization *58*
3.3.1.1 Ramp Function *59*
3.3.1.2 Sinusoidal Function *60*
3.3.1.3 Pulse Function *60*
3.3.1.4 Other Functions *61*
3.4 Use of Laplace Transform in Chemical Reactor Characterization *62*
3.4.1 Study of the RTD in the CSTR *62*
3.4.2 Study of the RTD in the PFR *65*
3.5 Complex Network of Ideal Reactors *66*
3.5.1 Systems in Series *67*
3.5.2 Systems in Parallel *69*
3.5.3 Systems with Recycle *71*
3.6 Transfer Function for the Dispersion Model *81*
Bibliography *85*

4 Partial Differential Equations in Reactor Design *87*
4.1 Introduction *87*
4.2 Classification of Partial Differential Equations *87*
4.3 Approximations by Finite Differences *88*
4.3.1 First-order Approximation *88*
4.3.2 Approximation of Second Order *89*
4.4 Approaching the Problem Using Finite Differences *91*
4.4.1 Explicit Method *93*
4.4.2 Initial and Boundary Conditions *94*
4.4.3 Stability *96*
4.4.3.1 Resolution of the Selected Problem and Programming *97*
4.5 Other Applications of PDE – Numerical Methods *98*
4.5.1 The RTD of a Complex System *98*
4.5.1.1 Boundary Conditions for Partial Differential Equations *101*
4.5.2 Concentration Profile in a Reactor in Which There Is Flow and Dispersion *104*

4.5.3 Reaction on a Catalytic Flat Wall *106*
Bibliography *110*

5 Unsteady State Regime Simulation in Reactor Design *111*
5.1 Introduction *111*
5.2 CSTR Working in Unsteady State *111*
5.3 PFR Working in Dynamic Regime (No Dispersion) *113*
5.4 PFR Working in Dynamic Regime (with Dispersion) *115*
5.5 Multiple Steady States in CSTR with Exothermal Reaction *118*
Bibliography *125*

6 Scaling and Stability of Chemical Reactors *127*
6.1 Introduction *127*
6.2 Scaling the Batch Tank Stirred Reactor *129*
6.2.1 Temperature Control. Heat Transmission *129*
6.2.2 Example of Scaling a Batch and Semi-batch Reactor *130*
6.3 Rapid Exothermic Reaction in a Tubular Reactor *136*
6.3.1 Study of the Stability of the Process *139*
Bibliography *155*

7 Forced Unsteady State Operation of Chemical Reactors *157*
7.1 Introduction *157*
7.2 Objectives and Types of FUSO *158*
7.3 Periodic Variation of the Input *159*
7.3.1 Modes of Operation *160*
7.3.2 Design Strategy *162*
7.3.2.1 Choice of the Entrance to Manipulate *162*
7.3.2.2 Choice of Handling *162*
7.3.2.3 Choice of Mode *162*
7.3.3 Periodic Variation of Concentration *163*
7.3.4 Periodic Variation of the Flow *164*
7.3.5 Periodic Variation in Temperature *165*
7.4 Periodic Flow Reversal *165*
7.4.1 Operation Design *167*
7.5 Operation with Variable Volume (VVO) *168*
7.6 Oscillating Pressure *169*
Bibliography *170*

Part II Catalytic, Multiphase and Biochemical Reactor Design *173*

8 Industrial Catalysis *175*
8.1 Introduction *175*
8.1.1 Reactors for Solid-Catalyzed Reactions *175*
8.1.2 Solid Catalysts (Supports) *178*

8.1.2.1 Choice of Catalyst Support *180*
8.1.2.2 Comparison and Uses of Supports *180*
8.1.2.3 Silica, Alumina, and Mixtures *181*
8.1.2.4 Zeolites *181*
8.1.2.5 Activated Carbons (ACs) *183*
8.2 Industrial Preparation of Catalysts *183*
8.2.1 Structure of Commercial Catalysts *184*
8.2.1.1 Synthesis of Zeolites *184*
8.2.1.2 Manufacturing of the Catalytic Support *185*
8.2.1.3 Impregnation with Active Metals *185*
8.2.2 Key Definitions in Catalysts Performance *186*
8.3 Main Catalytic Processes in Industry *188*
8.3.1 Acid Catalysis *190*
8.3.1.1 Fluid Catalytic Cracking *191*
8.3.1.2 Ethylbenzene Production *193*
8.3.2 Oxidation Catalysis *194*
8.3.2.1 Ethylene Oxide Production from Ethylene *194*
8.3.2.2 Acrylic Acid from Acrolein *196*
8.3.3 Reduction Catalysis *196*
8.3.3.1 Steam Reforming of Alcohols *197*
8.3.3.2 Steam Reforming of Hydrocarbons (Methane) *199*
8.3.3.3 Methanation: CO/H_2 to Methane *199*
8.3.4 Environmental Catalysis *200*
8.3.4.1 Catalytic Reactions for the Removal of Pollutants in the Exhaust Gases *201*
8.3.4.2 Components of the Cleaning Systems *202*
8.3.4.3 Three-Way Catalyst *202*
8.3.4.4 SCR Catalyst *203*
8.3.4.5 Diesel Oxidation Catalyst (DOC) *204*
8.3.4.6 Diesel Particulate Filter (DPF) Catalyst *204*
Bibliography *205*

9 Catalytic and Multiphase Reactor Design *207*
9.1 Introduction *207*
9.2 Rate Equation in Catalytic Systems *208*
9.2.1 Steps in the Catalytic Reaction *214*
9.3 Rate Equation When Chemical Step Is Limiting Reaction Rate *215*
9.3.1 Mechanisms of Catalysis *215*
9.3.2 Theories About Adsorption *217*
9.4 Rate Expression for External Diffusion as a Limiting Step *219*
9.5 Reaction Rate When Internal Diffusion Is Slow *221*
9.5.1 First-order Kinetics in Flat Particles *222*
9.5.2 First-order Kinetics in Other Geometries *225*
9.5.3 Limits of Thiele Modulus and Weisz Modulus *229*
9.6 Combination of Resistances *236*
9.7 Monolithic Catalytic Reactors *237*
9.8 Fluid–Fluid Reactions (Catalyzed and Noncatalyzed) *245*

9.8.1 Transfer Models *245*
9.8.2 Two-Film Theory *247*
9.8.2.1 Case A: Instantaneous Reaction *247*
9.8.2.2 Analysis of the Controlling Steps: The Hatta Modulus *250*
9.8.2.3 Other Cases in Fluid–Fluid Reactions: The General Rate Equation *251*
9.8.3 Gas–Liquid Reactions in Solid Catalysts. General Equation *256*
9.8.3.1 Estimation of the Controlling Resistance in Multiphase Systems *258*
9.8.3.2 General *n*-th Order Kinetics *260*
9.9 Design of Multiphase Reactors *261*
9.9.1 Types of Flow in Multiphase Reactors *261*
9.9.2 Design Models for Flow in Multiphase Reactors *262*
9.9.3 Case 1: Pure Absorption (No Reaction) *263*
9.9.3.1 Situation 1: Gas and Liquid Phases in Plug Flow *263*
9.9.3.2 Situation 2: Gas and Liquid Phases Completely Mixed *264*
9.9.3.3 Situation 3: Gas Phase in Plug Flow. Liquid Phase Completely Mixed *264*
9.9.4 Case 2: Systems with Reaction *265*
9.9.4.1 Situation 1: Gas and Liquid Phases in Plug Flow *265*
9.9.4.2 Situation 2. Gas and Liquid as Mixed Flow *268*
9.9.4.3 Situation 3. Gas in Plug Flow. Liquid Mixed Flow *269*
9.9.5 Case 3. Multiphase Reactors *269*
Bibliography *287*

10 Biochemical Reactors *289*
10.1 Introduction *289*
10.2 Enzymatic Catalysis *290*
10.2.1 Characteristics of Enzymatic Catalysis. The Active Center *290*
10.2.2 Kinetics of Enzymatic Reactions *292*
10.2.2.1 Kinetics of Reactions with a Single Substrate. Michaelis–Menten Equation *292*
10.2.2.2 Meaning of the Parameters of the Michaelis Equation *293*
10.2.3 Enzymatic Reactions with Inhibition *295*
10.2.4 Enzymatic Reactions with More than One Substrate *296*
10.2.4.1 Case 1. Enzymatic Reactions with Two Substrates by Formation of a Ternary Complex *296*
10.2.4.2 Case 2. Enzymatic Reactions with Two Substrates Without Formation of a Complex *300*
10.2.4.3 Strategies to Distinguish the Previous Cases *301*
10.3 Microbial Kinetics *304*
10.3.1 Stoichiometry of the Microbian Growth *304*
10.3.2 Stoichiometry of Product Formation *304*
10.3.2.1 Yields *305*
10.3.2.2 Theoretical Yield Obtained from Stoichiometric Coefficients *305*
10.3.3 Cell Growth, Substrate Consumption, and Product Formation *305*
10.3.3.1 Kinetics of Growth *306*
10.3.3.2 Kinetics of Maintenance *307*

10.4 Immobilization of Enzymes and Cells: Mass Transfer Effects *310*
10.4.1 Effect of Limitation by Internal Diffusion *313*
10.5 Bioreactors *314*
10.5.1 Continuous Stirred Tank Bioreactor (CSTB) *316*
10.5.1.1 Influence of the Dilution Rate. Calculation of the Bioreactor Wash *317*
10.5.1.2 Cell Recirculation *319*
10.5.2 Tubular Fermenters with Flocs *319*
10.5.2.1 Tubular Fermenter with Recirculation and Monod Kinetics *320*
10.5.3 Fed-batch Bioreactor *320*
Bibliography *325*

Index *327*
