Abstract	i
Zusammenfassung	iii
Acknowledgements	v
List of Symbols	vii
List of Abbreviations	ix
List of Figures	xv
List of Tables	xxvii
1 Introduction	1
1.1 Ultra-low-power gas sensors for air quality monitoring	1
1.2 Carbon nanotubes for NO ₂ sensing	4
1.2.1 Challenges in carbon nanotube-based NO ₂ sensing . .	5
2 State of the Art	7
2.1 Nanostructure-based gas sensors	8
2.1.1 Commercial gas sensors	8
2.1.2 1D nanomaterials: nanowires	9
2.1.3 1D nanomaterials: carbon nanotubes	14
2.1.4 Self-heating of suspended 1D nanostructures	21
2.1.5 Other nanostructures: nanoparticles and 2D materials	24
2.1.6 Summary: nanostructure-based NO ₂ sensors	25
2.2 Nanomaterial integration methods	28
2.2.1 Non-deterministic integration	28
2.2.2 Deterministic integration	34
2.2.3 Summary: robotic assembly of individual nanomaterials	40
2.3 Objectives of this work	40
3 Contact Improvement for Nanotube Self-heating	43
3.1 Carbon nanotube-electrode contact	43
3.1.1 Contact in bottom-contacted devices	44
3.1.2 Low contact resistance for nanotube self-heating . . .	45

Contents

- 3.2 Device fabrication and contact improvement methods 46
 - 3.2.1 Growth substrate 48
 - 3.2.2 Growth of suspended CNTs 49
 - 3.2.3 Device substrate 51
 - 3.2.4 Pre-transfer electrode etching with Ar-ion 51
 - 3.2.5 Dry transfer of CNTs 51
 - 3.2.6 Post-transfer thermal annealing 53
- 3.3 Results and analysis 53
 - 3.3.1 Contact improvement results 53
 - 3.3.2 Electrode surface analysis with XPS and AFM 58
 - 3.3.3 Contact quality analysis with Raman spectroscopy 65
 - 3.3.4 Implications for nanotube self-heating 67
 - 3.3.5 Long-term stability 69
 - 3.3.6 Au electrodes 71
- 3.4 Chapter summary 73

- 4 Robotic Assembly of Carbon Nanotubes 77**
 - 4.1 Process overview 78
 - 4.2 Batch growth of suspended carbon nanotubes 80
 - 4.2.1 Literature review 81
 - 4.2.2 CNT growth parameter optimization 82
 - 4.2.3 Large-scale growth substrate 89
 - 4.2.4 Batch growth on large-scale substrates 91
 - 4.3 Automated robotic assembly of carbon nanotubes 96
 - 4.3.1 Automated nanoassembly machine 96
 - 4.3.2 Electrical characterization of assembled devices 97
 - 4.4 Chapter summary 107

- 5 Fast Sensor Operation at Ultra-low Power 109**
 - 5.1 Sensor operation principles 109
 - 5.2 Experimental setup and methods 111
 - 5.3 Results and analysis 113
 - 5.3.1 Fast sensor recovery with optimized gate bias 113
 - 5.3.2 Fast sensor readout with nonlinear transient sensing 117
 - 5.3.3 Nanotube quality analysis with Raman spectroscopy 127
 - 5.3.4 Additional devices 129
 - 5.4 Chapter summary 134

- 6 Conclusions and Outlook 137**
 - 6.1 Conclusions 137
 - 6.2 Outlook 140

- A Appendix A - Process Run Sheets 143**
 - A.1 Growth substrates 143
 - A.2 Device substrates 145
