Preface *xiii*

1	Polymer Electrolytes: State of the Art	1
	<i>Masashi Kotobuki</i>	
1.1	Introduction	1
1.2	Solid Polymer Electrolyte	4
1.3	Gel Polymer Electrolyte	8
1.4	Composite Polymer Electrolyte	12
1.5	Summary	17
	References	17
2	Impedance Spectroscopy in Polymer Electrolyte	
	Characterization	23
	<i>Mohamed Abdul Careem, Ikhwan Syafiq Mohd Noor, and Abdul K. Arof</i>	
2.1	Introduction	23
2.2	IS: Principal Operation and Experimental Setup	23
2.2.1	Basic Principles of Impedance Spectroscopy	23
2.2.2	Impedance Spectroscopy (IS) Technique	25
2.2.3	Electrical Conductivity of a Sample	26
2.2.4	Conditions Necessary for IS Measurements	26
2.2.5	Impedance Plots of Simple Circuits	28
2.2.5.1	A Pure Resistance, R	28
2.2.5.2	A Pure Capacitance, C	28
2.2.5.3	R and C Connected in Series	29
2.2.5.4	R and C Connected in Parallel	30
2.2.5.5	Combined Series and Parallel Circuits	31
2.2.5.6	Impedance Spectra of Model Electrolyte Systems	32
2.2.6	Possible Conduction Processes in a Solid Electrolyte	35
2.2.7	Impedance Spectra of Real Systems	36
2.2.7.1	The Constant Phase Element (CPE)	37
2.2.7.2	Equivalent Circuits for Real Systems	37
2.2.7.3	Electrolyte/Electrode (E/E) Interface	39
2.2.7.4	Diffusion Impedance or Mass Transport Impedance	39
2.2.7.5	Warburg Impedance	40
2.2.7.6	Equivalent Circuit Representation of an E/E System	41

2.2.8	Impedance-Related Functions	42
2.2.8.1	Immittance Functions	43
2.2.8.2	Relationships Between Immittance Functions	43
2.2.8.3	Immittance Plots	43
2.2.8.4	Choice Between Immittance Functions	46
2.2.9	Experimental Setup	46
2.2.9.1	Sample and Cell Arrangement	47
2.2.9.2	Other Practical Details and Precautions	48
2.3	IS: Experimental Data Interpretation and Analysis	49
2.3.1	Determination of Bulk Resistance from the Impedance Plots	49
2.3.2	Impedance Data Interpretation and Analysis	50
2.3.2.1	Interpretation of Impedance Data	51
2.3.2.2	Choice of Equivalent Circuits	51
2.3.3	Determination of Transport Parameters from Impedance Data	53
2.3.3.1	Bandara–Mellander (B–M) Method	53
2.3.3.2	Nyquist Plot Fitting Method	57
2.3.4	Some Experimental Results and Analysis	59
2.3.4.1	Conductivity Calculation of Impedance Plots	59
2.3.4.2	Conductivity Determination from Fitting Equivalent Circuit	60
2.3.4.3	Evaluation of Transport Properties using Nyquist Plot Fitting Method	60
2.4	Conclusions	63
	References	64
3	Thermal Characterization of Polymer Electrolytes	65
	<i>Aparna Thankappan, Manuel Stephan, and Sabu Thomas</i>	
3.1	Introduction	65
3.2	TGA: Experimental Data Interpretation and Analysis	67
3.3	DSC: Experimental Data Interpretation and Analysis	75
3.4	DSC: Experimental Errors and Suggestion for Improvement	82
3.4.1	Transition(s) at 0 °C	83
3.4.2	Apparent Melting at T_g	83
3.4.3	Exothermic Peaks Below Decomposition Temperature While Heating	84
3.4.4	Baseline Shift after Endothermic or Exothermic Peaks	86
3.4.5	Sharp Endothermic Peaks During Exothermic Reactions	86
3.5	DMA: Experimental Data Interpretation and Analysis	87
	References	91
4	Energy in a Portable World	93
	<i>Noor Syuhada Zakuan, Woo Haw Jiunn, and Tan Winie</i>	
4.1	Introduction	93
4.2	History Development of Mobile Power	94
4.3	Caring for Mobile Power from Birth to Retirement	102
4.3.1	Getting the Most Out of the Primary Batteries	103
4.3.2	Getting the Most Out of the Lead-Acid Batteries	103
4.3.3	Getting the Most Out of the Nickel-Based Batteries	104

4.3.4	Getting the Most Out of the Lithium Ion Batteries	105
4.4	Mobile Power Recycling	106
4.4.1	Recycling Primary Batteries	106
4.4.2	Recycling Rechargeable Batteries	109
	Acknowledgments	111
	References	111
5	Insight on Polymer Electrolytes for Electrochemical Devices	
	Applications	113
	<i>Maria Manuela Silva, Verónica de Zea Bermudez, and Agnieszka Pawlicka</i>	
5.1	Introduction	113
5.2	Theory: Ionic Conductivity	117
5.3	Applications	120
5.3.1	Conventional Batteries and Transient Batteries	120
5.3.2	Fuel Cells	123
5.3.3	Supercapacitors	124
5.3.4	Electrochromic Devices	125
5.3.5	Dye-Sensitized Solar Cells	127
5.3.6	Sensors	128
5.3.7	Light-Emitting Electrochemical Cells	128
	References	129
6	Polymer Electrolyte Application in Electrochemical Devices	137
	<i>Siti Nor Farhana Yusuf and Abdul K. Arof</i>	
6.1	Introduction	137
6.2	Properties of Polymer Electrolytes (PEs)	137
6.3	Review of Polymer Electrolytes	138
6.3.1	Dry Solid Polymer Electrolytes (SPEs)	138
6.3.2	Gel Polymer Electrolytes (GPEs)	141
6.3.2.1	Ionic Liquid Gel Polymer Electrolytes (ILGPEs)	144
6.3.2.2	Gel Polymer Electrolytes with Nanomaterials	146
6.4	Application of PEs in Electrochemical Devices	148
6.4.1	Dye-Sensitized Solar Cells (DSSCs)	148
6.4.2	Lithium Ion Batteries	150
6.4.3	Electrical Double Layer Capacitors (EDLCs)	152
6.4.4	Polymer Electrolyte Fuel Cells	156
6.4.5	Electrochromic Windows	163
6.4.6	Electrochromic Materials	164
6.4.6.1	Transition Metal Oxides	164
6.5	Challenges and Improvements	167
6.5.1	In Electrolytes	167
6.5.2	In Devices	169
6.5.2.1	DSSCs	169
6.5.2.2	Fuel Cell	170
6.5.2.3	Batteries	171

6.5.2.4	EDLCs	172
6.5.2.5	Electrochromic Windows (ECWs)	172
6.6	Future Aspects	173
6.6.1	Electrochromic Windows	173
6.6.2	Batteries	173
6.6.3	DSSCs	173
6.6.4	Fuel Cells	174
	References	175
7	Polymer Electrolytes for Lithium Ion Batteries and Challenges:	
	Part I	187
	<i>Shishuo Liang, Wenqi Yan, Minxia Li, Yusong Zhu, Lijun Fu, and Yuping Wu</i>	
7.1	Introduction	187
7.2	Classification of Polymer Electrolytes	188
7.2.1	Solid Polymer Electrolytes (SPEs)	188
7.2.2	Gel Polymer Electrolytes (GPEs)	190
7.3	Performance and Improvements	190
7.4	Application and Performance of Polymer Lithium Ion Batteries	194
7.5	Future Trends	195
	Acknowledgments	196
	References	197
8	Polymer Electrolytes for Lithium Ion Batteries and Challenges:	
	Part II	201
	<i>Siti Nor Farhana Yusuf and Abdul K. Arof</i>	
8.1	Introduction	201
8.2	Structure and Operation of Lithium Ion Batteries	202
8.2.1	Anode Materials	204
8.2.2	Cathode Materials	205
8.2.3	Electrolytes	206
8.2.4	Li ⁺ Ion Transport in Polymer Electrolytes	206
8.3	Polymer Electrolyte for Lithium Ion Batteries	207
8.4	Performance Characteristics of Lithium Ion Batteries	216
8.5	Challenges and Improvement	218
8.6	Future Trends	219
	References	221
9	Polymer Electrolytes for Supercapacitor and Challenges	231
	<i>Safir Ahmad Hashmi, Nitish Yadav, and Manoj Kumar Singh</i>	
9.1	Introduction	231
9.2	Principle and Working Process of Supercapacitors	232
9.2.1	Charge Storage Mechanisms in EDLCs	233
9.2.2	Charge Storage Mechanisms in Pseudocapacitors	236
9.2.2.1	Underpotential Deposition	237
9.2.2.2	Redox Pseudocapacitance	237
9.2.2.3	Intercalation Pseudocapacitance	238

9.3	Electrolytes for Supercapacitors	239
9.3.1	Liquid Electrolytes	239
9.3.2	Polymer-Based Electrolytes	241
9.3.2.1	Solvent-Free Solid Polymer Electrolytes (SPEs)	242
9.3.2.2	Gel Polymer Electrolytes (GPEs)	242
9.3.2.3	Porous Polymer Electrolytes	252
9.4	Performance Characteristics	255
9.4.1	Electrode Characterization	255
9.4.2	Characterization of Supercapacitors	258
9.4.2.1	Electrochemical Characterization Techniques and Important Parameters	258
9.4.2.2	Performance of Polymer Electrolyte-Based Supercapacitors: Some Case Studies	262
9.5	Challenges to Solid-State Supercapacitors and Future Scope of Improvement	284
	References	285
10	Polymer Electrolytes for Quantum Dot-Sensitized Solar Cells (QDSSCs) and Challenges	299
	<i>T.M.W.J. Bandara and J.L. Ratnasekera</i>	
10.1	Demand and Supply of Energy	299
10.2	The Sun as a Potential Energy Resource	300
10.3	Advantages of Solar Cells	301
10.4	Photo-Electrochemical Solar Cells	301
10.4.1	General Mechanism of a Photo-Electrochemical Solar Cell	303
10.4.2	Mechanism of a Photo-Electrochemical Solar Cell	304
10.4.3	Semiconductor/Polymer Electrolyte Junction	308
10.4.4	Photo-sensitization of Wide Bandgap Semiconductors	308
10.5	Quantum Dot-Sensitized Solar Cells (QDSSCs)	310
10.5.1	Quantum Dots	310
10.5.2	Mechanism of a QDSSC	313
10.5.3	Quantum Dot-Sensitized Solar Cells (QDSSCs)	314
10.5.4	Polymer Electrolytes for QDSSCs	317
10.6	Performances of Different QDSSCs Assemblies Based on Polymer Electrolytes	318
10.6.1	Quasi-Solid-State QDSSCs Based on Polyacrylamide Hydrogel Electrolytes	318
10.6.1.1	Hydrogel Electrolyte with Polyacrylamide	318
10.6.2	CdS-Sensitized Cell with PAN and PVDF Electrolytes	319
10.6.3	ZnO-Based Quasi-Solid QDSSCs Sensitized with CdS and CdSe	323
10.6.3.1	Quasi-Solid-State Electrolyte Preparation	324
10.6.4	Natural Polysaccharide Thin Film-Based Electrolyte for Quasi-Solid State QDSSCs	324
10.6.5	Dextran-Based Hydrogel Polysulfide Electrolyte for Quasi-Solid-State QDSSCs	325
10.6.6	Carbon Dots Enhance Light Harvesting in a Solid-State QDSSC	326

10.6.7	Quantum Dot-Sensitized Solar Cells Based on Oligomer Gel Electrolytes	326
10.6.8	QDSSCs with Thiolate/Disulfide Redox Couple and Succinonitrile-Based Electrolyte	327
10.6.9	Graphene-Implanted Polyacrylamide Gel Electrolytes for QDSSCs	328
10.6.10	PEO and PVDF-Based Electrolyte for Solid-State Electrolytes for QDSSCs	329
10.6.11	Hydroxystearic Acid-Based Polysulfide Hydrogel Electrolyte for CdS/CdSe QDSSCs	329
10.6.12	QDSSCs Based on a Sodium Polyacrylate Polyelectrolyte	330
10.7	Summary	331
	References	334
11	Polymer Electrolytes for Perovskite Solar Cell and Challenges	339
	<i>Rahul Singh, Hee-Woo Rhee, Bhaskar Bhattacharya, and Pramod K. Singh</i>	
11.1	Introduction	339
11.2	Principle and Working Process of Perovskite Solar Cell	341
11.2.1	Perovskite Materials	342
11.2.2	Perovskite Structure	344
11.2.3	Synthesis of Perovskite	349
11.2.3.1	Solution-Processed Method	349
11.2.3.2	Hot Casting Technique	352
11.2.3.3	Vapor Deposition Method	352
11.2.3.4	Thermal Evaporation Technique	352
11.3	Polymer Electrolyte for Perovskite Solar Cell	354
11.3.1	Device Fabrication	354
11.3.2	Hole Transport Layer	355
11.4	Performance Characteristics	355
11.5	Challenges and Improvement	356
11.6	Future Trends	357
11.7	Conclusion	358
	Competing Interests	358
	Acknowledgments	358
	References	358
12	Polymer Electrolytes for Electrochromic Windows	365
	<i>Li Na Sim and Agnieszka Pawlicka</i>	
12.1	Introduction	365
12.2	Principles and Working Process of Electrochromic Window	366
12.3	Types of Electrochromic Electrodes	367
12.4	Mechanism of ECW	368
12.5	Polymer Electrolytes for Electrochromic Windows	369
12.5.1	Background	369
12.5.2	Criteria of Polymer Electrolytes and Electrochromic Device	369
12.5.3	Types of Polymer Electrolytes Used in ECWs	370

12.5.3.1	Solid Polymer Electrolytes (SPEs)	370
12.5.3.2	Gel Polymer Electrolytes (GPEs)	374
12.5.3.3	Composite Polymer Electrolyte	383
12.6	Present ECDs Uses/Applications	385
	References	385
