Preface — V

Abstract — VI

1 Introduction — 1

2 Generals in statics and dynamics of global atmosphere — 7

- 2.1 Properties of global atmosphere — 7
 - 2.1.1 Model of standard atmosphere — 7
 - 2.1.2 Energetic balance for the Earth and its atmosphere — 10
- 2.2 Greenhouse molecular components in the atmosphere — 12
 - 2.2.1 Atmospheric water vapor — 12
 - 2.2.2 Atmospheric carbon dioxide — 16
 - 2.2.3 Trace components in the atmosphere — 20
- 2.3 Evolution of global temperature — 22
 - 2.3.1 Contemporary variation of global temperature — 22
 - 2.3.2 Variation of global temperature in past — 25
 - 2.3.3 Chemical equilibrium between the Earth and atmosphere — 27
- 2.4 Dynamics of atmospheric air with microparticles — 30
 - 2.4.1 Convective motion of atmospheric air — 30
 - 2.4.2 Transport of water microdrops in convective air — 33

3 Water microdrops in atmospheric air — 37

- 3.1 Processes of water condensation in atmospheric air — 37
 - 3.1.1 Behavior of water microdrops in tropospheric air — 37
 - 3.1.2 Condition of water condensation in atmospheric air — 42
 - 3.1.3 Mixing of air streams involving the condensed water phase — 44
- 3.2 Character of water condensation in atmospheric air — 45
 - 3.2.1 Mechanisms of drop growth in air — 45
 - 3.2.2 Growth of water drops due to coagulation and coalescence — 49
 - 3.2.3 Gravitation mechanism of growth of water drops — 56
- 3.3 Water circulation between the Earth and atmosphere — 59
 - 3.3.1 Character of water circulation through atmosphere — 59
 - 3.3.2 Electric properties of water drops of cumulus cloud — 61
 - 3.3.3 Processes of transformation of water drops in rain — 64
 - 3.3.4 Kinetics of atmospheric electricity — 68

4 Thermodynamics of thermal atmospheric emission — 71

- 4.1 Radiation of flat layer — 71
 - 4.1.1 Radiation in uniform gas — 71
 - 4.1.2 Emission from flat gaseous layer — 73

4.2	Character of thermal atmospheric emission —	77
4.2.1	Emission of atmosphere as flat gaseous layer —	77
4.2.2	Model of frequency-independent absorption —	80
4.2.3	Atmospheric thermal radiation from thermodynamic standpoint —	82
4.2.4	Distribution over optical thicknesses —	85
4.3	Water microdrops in atmospheric emission —	86
4.3.1	Model of average atmospheric absorption —	86
4.3.2	Absorption by small water drops —	90
4.3.3	Water microdrops as atmospheric radiators —	96
5	Spectroscopy properties of radiative atmospheric molecules —	101
5.1	Radiative processes involving CO_2 molecules —	101
5.1.1	Infrared spectroscopy of CO_2 molecules —	101
5.1.2	Regular model for the absorption coefficient due to linear molecules —	106
5.1.3	Data of HITRAN bank in evaluation of absorption coefficient due to CO_2 molecules —	112
5.1.4	Infrared resonant radiation of CO_2 molecules —	116
5.2	Absorption by atmospheric water —	118
5.2.1	Absorption cross section due to atmospheric water molecules —	118

Part 2: Greenhouse phenomenon of standard atmosphere

6	Infrared radiative energetics of standard atmosphere —	125
6.1	Emission due to water molecules —	125
6.1.1	Models of infrared atmospheric emission —	125
6.1.2	Emission of atmospheric water molecules at low frequencies —	129
6.1.3	Water molecules as the main atmospheric radiator at low frequencies —	134
6.2	Infrared emission of the atmosphere with participation of CO_2 molecules —	137
6.2.1	Atmospheric emission in the transition frequency range (580 – 700) cm^{-1} —	137
6.2.2	Atmospheric emission in the frequency range (700 – 800) cm^{-1} —	141
7	Shortwave infrared atmospheric emission —	149
7.1	Infrared atmospheric emission of water and carbon dioxide molecules at large frequencies —	149
7.1.1	Atmospheric emission in the frequency range (800 – 1000) cm^{-1} —	149
7.1.2	Atmospheric emission in the frequency range (1000 – 1100) cm^{-1} —	151
7.1.3	Model of single spectral lines —	152

7.1.4	Atmospheric emission due to resonant vibration transition of CO_2 molecules — 156
7.2	Trace gases in atmospheric radiation — 159
7.2.1	Emission of atmospheric methane — 159
7.2.2	Emission of atmospheric nitrogen dioxide — 163
7.2.3	Infrared radiative fluxes for standard atmosphere — 169
8	Emission of a varied atmosphere — 173
8.1	Atmospheric emission at variation of greenhouse components — 173
8.1.1	Models of interaction between radiating components in a varied atmosphere — 173
8.1.2	Atmospheric emission at doubled concentration of carbon dioxide — 176
8.1.3	Radiative flux depending of concentration of radiating molecules — 182
8.2	Connection between global temperature and global energy fluxes — 185
8.2.1	Climate sensitivity due to radiation — 185
8.2.2	Climate sensitivity of the Earth and atmosphere — 187
8.2.3	Temporary changes of atmospheric fluxes — 192
8.3	Water condensed phase in atmospheric processes — 194
8.3.1	Power of outgoing atmospheric radiation — 194
8.3.2	Radiative water microdrops in the atmosphere — 196
8.3.3	Role of water microdrops in electrical and optical properties of the atmosphere — 200
9	Peculiarities of emission in atmospheric energetics — 203
9.1	Atmosphere as a media for transport of infrared radiation — 203
9.1.1	Model of standard atmosphere in its emission — 203
9.1.2	Weather of megalopolises — 205
9.1.3	Hydroelectric plants and greenhouse effect — 209
9.2	The problem of atmospheric carbon dioxide — 211
9.2.1	Correlation between carbon dioxide and global temperature — 211
9.2.2	Global deforestation — 212
9.2.3	World energetics in growth of atmospheric carbon dioxide — 215
9.3	Change of the Earth's climate — 219
9.3.1	Solar variations related to climate — 219
9.3.2	Particle emission in climate change — 221
9.3.3	Cosmic rays and climate — 224
9.3.4	Paris agreements and climate change — 225

XII — Contents

10 Conclusion — 227

Bibliography — 229

Subject Index — 241

List of Figures — 243
