Preface — VII

Acknowledgment — IX

The Author — XI

Chapter 1

Introduction — 1

- 1.1 Macromolecules Versus Polymers — **1**
- 1.2 Biomacromolecules (Biopolymers or Natural Polymers) — **2**
- 1.3 Chemical Bonding — **7**
 - 1.3.1 Bonds Classification — **7**
 - 1.3.2 Electrovalent (Ionic) Bond — **7**
 - 1.3.3 Covalent Bond — **10**
 - 1.3.4 Hydrogen Bond — **10**
- 1.4 Types of Chemical Reactions in Biomacromolecules — **11**
 - 1.4.1 Glycoside Bond Formation (Glycosidation Reaction) — **11**
 - 1.4.2 Triglyceride Formation (Esterification Reaction) — **12**
 - 1.4.3 Peptide Bond Formation (Condensation Reaction) — **12**
 - 1.4.4 Dinucleotide or Oligonucleotide Formation (Coupling Reaction) — **12**
- 1.5 Drawing Chemical Structures of Biomacromolecules — **13**
- 1.6 Functional Groups in Biomacromolecules — **13**
- 1.7 Essential Keywords — **14**
- 1.8 Practice Exercises — **16**

Chapter 2

Carbohydrates — 18

- 2.1 Definition — **18**
- 2.2 Classification — **18**
- 2.3 Monosaccharides — **21**
 - 2.3.1 Fischer, Wedge-Dash, Haworth, and Chair Forms of Monosaccharides — **21**
 - 2.3.2 Cyclization (Ring Formation) of Monosaccharides — **22**
 - 2.3.2.1 Cyclization of D-Glucose — **22**
 - 2.3.2.2 Cyclization of D-Fructose — **23**
 - 2.3.2.3 Cyclization of D-Ribose — **24**
 - 2.3.3 Reactions of Monosaccharides — **24**
 - 2.3.3.1 Glycosidation (Glycoside Bond Formation) — **24**
 - 2.3.3.2 Hydrolysis of Glycosides — **26**

2.3.3.3	Alkylation of Glycosides (Formation of Ethers) —	26
2.3.3.4	Acylation of Glycosides (Formation of Esters) —	26
2.3.3.5	Oxidation to Acidic Sugars —	27
2.3.3.6	Reduction to Sugar Alcohols —	27
2.3.3.7	Koenigs-Knorr Reaction —	28
2.3.3.8	Phosphorylation Reaction —	28
2.3.3.9	Chain Lengthening: The Kiliani-Fischer Synthesis —	28
2.3.3.10	Chain Shortening: The Wohl Degradation —	28
2.3.4	Mutarotation —	30
2.3.5	Epimerization —	30
2.3.6	Isomerization (Enolization-Tautomerization) of D-Glucose to D-Fructose —	31
2.4	Disaccharides —	32
2.4.1	Lactose —	32
2.4.2	Sucrose —	33
2.4.3	Maltose —	33
2.4.4	Isomaltose —	33
2.4.5	Cellobiose —	34
2.4.6	Gentiobiose —	34
2.4.7	Trehalose —	35
2.5	Oligosaccharides —	35
2.5.1	Raffinose —	35
2.5.2	Maltotriose —	35
2.5.3	Stachyose —	36
2.5.4	Maltodextrins —	36
2.5.5	Maltotetraose —	37
2.6	Polysaccharides —	38
2.6.1	Starch —	38
2.6.2	Cellulose —	39
2.6.3	Pullulan —	40
2.6.4	Glycogen —	40
2.6.5	Dextran —	41
2.6.6	Inulin —	42
2.6.7	Chitin —	43
2.6.8	Lignin —	43
2.7	Essential Keywords —	44
2.8	Practice Exercises —	45

Chapter 3**Lipids — 48**

- 3.1 Types (Classes) of Lipids — **48**
- 3.2 Fatty Acids — **48**
 - 3.2.1 ω -3 and ω -6 Fatty Acids — **48**
 - 3.2.2 Unsaturated Fatty Acids with Triple Bonds — **50**
- 3.3 Waxes — **51**
- 3.4 Fats and Oils (Triglycerides or Triacylglycerols) — **52**
 - 3.4.1 Naming Triglycerides — **52**
 - 3.4.2 Chemical Reactions of Triglycerides — **53**
- 3.5 Phospholipids — **54**
- 3.6 Sphingolipids — **55**
- 3.7 Eicosanoids — **57**
- 3.8 Steroids — **57**
 - 3.8.1 Sex Hormones — **58**
 - 3.8.2 Adrenal Cortex Hormones (Corticosteroids) — **59**
 - 3.8.3 Sterols — **59**
 - 3.8.4 Bile Acids — **60**
 - 3.8.5 Steroid Molting Hormones — **61**
- 3.9 Terpenes — **61**
- 3.10 Terpenoids — **62**
- 3.11 Vitamins — **62**
- 3.12 Conjugated Lipids or Lipid Polymer Conjugates — **63**
- 3.13 Essential Keywords — **65**
- 3.14 Practice Exercises — **67**

Chapter 4**Proteins (Polymers of Amino Acids) — 70**

- 4.1 Definition — **70**
- 4.2 Amino Acids (Proteins Building Blocks) — **70**
 - 4.2.1 Structures and Nomenclature of Amino Acids — **70**
 - 4.2.2 Synthesis of α -Amino Acids — **72**
 - 4.2.3 Resolution of D,L-Amino Acids — **72**
 - 4.2.4 Acid-Base Behavior of Amino Acids — **72**
 - 4.2.5 Separation of Amino Acids — **75**
 - 4.2.6 Chirality of Amino Acids — **77**
- 4.3 Peptide Bond — **77**
- 4.4 Polypeptides (Polypeptide Chains) — **77**
- 4.5 Peptide Nomenclature — **79**
- 4.6 Peptide Synthesis (The General Principles) — **80**
 - 4.6.1 Dipeptide Synthesis — **80**
 - 4.6.2 Solid-Phase Synthesis for Peptides and Polypeptides — **81**

4.7	Levels of Protein Structure —	81
4.7.1	Primary Structure —	81
4.7.2	Secondary Structure —	83
4.7.3	Tertiary Structure —	83
4.7.4	Quaternary Structure —	84
4.8	Common Proteins —	84
4.8.1	Keratin —	84
4.8.2	Wool —	86
4.8.3	Silk —	87
4.8.4	Collagen —	87
4.8.5	Gelatin —	88
4.9	Enzymes —	88
4.9.1	Enzyme Structure —	89
4.9.2	Enzyme Nomenclature and Classification —	90
4.9.3	Models of Enzyme Action —	90
4.9.3.1	Lock-and-Key Model —	90
4.9.3.2	The Induced-Fit Model —	91
4.9.4	Enzyme's Active Site —	92
4.10	Essential Keywords —	92
4.11	Practice Exercises —	93

Chapter 5

Nucleic Acids — 96

5.1	Introduction —	96
5.2	Structure Discovery of DNA —	96
5.3	Nucleic Acids Components —	98
5.3.1	Pentose Sugars “Structure and Nomenclature” —	98
5.3.2	Nucleic Acids Bases (Nitrogenous Bases or Nucleobases) “Structure and Nomenclature” —	98
5.3.3	Nucleosides: Structure and Nomenclature —	98
5.3.4	Nucleotides: Structure and Nomenclature —	99
5.3.5	DNA Versus RNA —	100
5.3.6	Syn- Versus Anti-conformations —	100
5.3.7	Tautomerism of the Nucleic Acid Bases —	102
5.3.8	Hydrogen Bonding in Nucleic Acids (DNA Watson-Crick Base Pairing) —	103
5.3.9	DNA Sugar Puckering —	103
5.4	Solid-Phase Synthesis of Oligonucleotides —	103
5.5	Xeno Nucleic Acids (XNAs) or Antisense Oligonucleotides (ASOs) —	105
5.6	Nucleic Acid Drugs —	107
5.7	Oligonucleotide Labeling —	110
5.8	Oligonucleotide Purification and Characterization —	111

- 5.9 Central Dogma (DNA to RNA to Protein) — **113**
- 5.9.1 DNA (Gene) Replication — **113**
- 5.9.2 DNA (Gene) Expression — **114**
- 5.10 The Genetic Code — **114**
- 5.11 Polymerase Chain Reaction (PCR) — **118**
- 5.12 DNA Fingerprinting — **118**
- 5.13 DNA Secret Code — **120**
- 5.14 Essential Keywords — **122**
- 5.15 Practice Exercises — **124**

Solutions to Practice Exercises — 127

Abbreviations — 143

Resources and Further Readings — 147

Appendices — 153

Index — 157
