

Contents

Preface	V
About the Authors	VII
1 Introduction	1
1.1 Potentials and Benefits of Industry 4.0	4
1.2 Challenges for Successful Implementation of Industry 4.0	6
2 Data Acquisition and Process Monitoring as Enabler for Industry 4.0	11
2.1 The Necessity of Data Acquisition	15
2.1.1 Quality Control in the 1990s	16
2.1.2 Exemplary Fields of Application	18
2.2 Gaining Insights into the Process	20
2.2.1 Differentiation of Injection Molding Process Data	21
2.2.2 Economic Evaluation of the Injection Molding Process Based on Measurable Values	25
2.2.3 Process Data for Setup of a New Process	27
2.2.4 Process Control	28
2.2.4.1 Online Process Control	28
2.2.4.2 Process Control Concepts	29
2.3 Data Acquisition Methods	32
2.3.1 Material Properties for Digital Engineering	32
2.3.1.1 Thermal Properties of Plastic Melts	33
2.3.1.2 pvT-Behavior	35
2.3.1.3 Rheological Properties	43

2.3.1.4	Mechanical Properties	45
2.3.1.5	Applications of Data in Digital Engineering	46
2.3.2	Data Acquisition and Process Monitoring Methods	46
2.3.2.1	Temperature Measurement	47
2.3.2.2	Pressure Measurement	52
2.3.2.3	Electrical Pressure Measurement	53
2.3.2.4	Position Measurement	55
2.3.3	Humidity Measurement	58
2.3.4	Part Measurement	60
2.3.4.1	Part Measurement (Post-Mortem)	60
2.3.4.2	Optical Measurement	62
2.3.4.3	Tactile Measurement	66
2.3.5	Combination of Tactile and Optical Measurements	67
2.4	The Different Types of Quality Control	67
2.4.1	Offline Quality Control	68
2.4.2	Inline Quality Control	68
2.4.3	Online Quality Control	69
3	Cyber-Physical Systems	75
3.1	Computer Integrated Manufacturing as Conceptual Foundation for Cyber-Physical Production Systems	76
3.2	CPPS in Plastics Processing	80
3.3	Communication Capability of CPPS Components in Injection Molding	85
3.4	Planning and Realizing a CPPS in Plastics Processing	90
4	Models and Artificial Intelligence	97
4.1	Model Quality	98
4.2	Three Different Categories of Models	101
4.2.1	Physical Models	102
4.2.2	Knowledge-Based Systems	109
4.2.3	Artificial Intelligence	112
4.2.3.1	AI Modeling Methods	112
4.2.3.2	Artificial Neural Networks (ANNs)	116
4.2.3.3	AI Modeling Examples in the Plastics Industry	127

5	Global Connectivity	137
5.1	Data Availability	137
5.2	Data Management	138
5.3	IT Infrastructure	143
5.3.1	Cloud Computing	143
5.3.2	Edge Computing	146
5.3.3	Hybrid System in Plastics Processing	146
5.4	Machine and Data Interfaces	148
5.4.1	Digital I/O	148
5.4.2	Analog I/O	150
5.4.3	Serial Interfaces	152
5.5	Data Systems	154
5.5.1	Introduction	154
5.5.2	Need for Data Processing	154
5.5.3	Development of Data Systems	155
5.5.4	Enterprise Resource Planning	156
5.5.5	Manufacturing Execution System	158
5.5.6	ERP/MES in the Plastics Processing Industry	161
5.5.7	Requirements for ERP/MES in the Context of Industry 4.0	163
5.5.8	Developed Systems in Research	164
5.5.9	Used Systems in the Industry	165
5.5.9.1	SAP ERP	166
5.5.9.2	FEKOR MES	168
5.5.9.3	authenTIG	171
6	Digital Engineering	175
6.1	Introduction	175
6.1.1	Digital Materials	177
6.1.2	Material Modeling on the Nanoscopic Scale	178
6.1.3	Material Modeling on the Microscopic and Mesoscopic Scale	181
6.1.4	Material Models on the Macroscopic Scale	184
6.1.4.1	Isotropic Linear-Elastic Behavior	185
6.1.4.2	Orthotropic Linear-Elastic Behavior	185
6.1.4.3	Hyperelastic Behavior	186

6.1.4.4	Anisotropic Hyperelastic Behavior	187
6.1.4.5	Plastic Material Models	188
6.1.4.6	Viscoelasticity	188
6.1.4.7	Damage Model for Dynamic Load	189
6.2	Process Simulation	189
6.2.1	Setting up Injection Molding Simulation	190
6.2.2	Design and Optimization Using Injection Molding Simulation	192
6.3	Result Analysis and Mapping	197
6.3.1	Calculation of Mechanical Properties Based on Local Microstructure	197
6.3.2	Weld Lines	198
6.3.3	Elastomers: Considering Crosslinking Level in Structural Simulation	199
6.3.4	Thermoplastic Elastomers: Determination of Elastomer Particle Size	201
6.4	Part Simulation	202
6.5	Artificial Neural Networks in Virtual Process Development	207
7	Complex Value Chain	221
7.1	Introduction to Complex Value Chains	221
7.2	Shop Floor Management	223
7.2.1	Lean Management	224
7.2.2	Key Figures for Plastics Processing	228
7.2.3	Shop Floor Management in the Context of Industry 4.0	230
7.2.4	Asset Identification	231
7.2.4.1	Identification, Tracking, and Tracing of Assets	231
7.2.4.2	Technical Solutions of Asset Identification	233
7.2.4.3	Plastic-Related RFID Research Projects	238
7.2.5	Warehouse Management	240
7.2.6	Logistics 4.0	245
7.2.7	Equipment Management	250
7.3	Examples of Complex Value Chains in Plastics Processing	252
7.3.1	Model-Based Setup of Injection Molding Processes	252
7.3.2	Producing Multiple Variants in a Production Cell	256

- 8 Assistant Systems 265**
 - 8.1 Requirements and Functionalities Regarding Assistant Systems 266
 - 8.2 Simulation-Based Assistance for Process Setup 268
 - 8.3 Predictive Maintenance 276
 - 8.3.1 Maintenance Routines 277
 - 8.3.2 Predictive Maintenance in Injection Molding 278
 - 8.3.2.1 Predictive Maintenance for Injection Molding Machines 279
 - 8.3.2.2 Predictive Maintenance for Injection Molds 281
 - 8.4 Augmented Reality and Virtual Reality as Visual Support 283
 - 8.4.1 Definition and Demarcation of Terms 284
 - 8.4.2 State of the Art 284
 - 8.4.3 Industry 4.0 and Augmented Reality 286
 - 8.5 Commercially Available Tools 287
 - 8.5.1 Engel iQ Control Systems for Process Support in Injection Molding 288
 - 8.5.2 ARBURG Continuous Quality Control with the CQC System ... 289
 - 8.5.3 KraussMaffei Adaptive Process Control to Deal with Material Fluctuations 290
 - 8.5.4 Sumitomo Enhanced Machine Efficiency with ActivePlus 291
 - 8.5.5 Process Optimization with STASA QC 292
- Index 299**
