Contents

Preface *xi*

1 AI for Property Modeling, Solvent Tailoring, and Process Design *1*
Yuqiu Chen
1.1 AI-Assisted Property Modeling *1*
1.2 AI-assisted Solvent Tailoring *10*
1.3 AI-Assisted Process Design *14*
1.4 Conclusions *17*
References *19*

2 Hunting for Better Aromatic Chemicals with AI Techniques *23*
Qilei Liu, Haitao Mao, Lu Wang, and Lei Zhang
2.1 Introduction *23*
2.2 Machine Learning-Based Odor Prediction Models *25*
2.2.1 Odor Predictions for Pure Aromatic Chemicals Using Group-Based Machine Learning Method *25*
2.2.1.1 Database Preparation *25*
2.2.1.2 Molecular Representation *26*
2.2.1.3 Model Architecture *27*
2.2.1.4 Results and Discussions *27*
2.2.2 Odor Prediction for Mixture Aromatic Chemicals Using σ-Profiles-Based Machine Learning Method *29*
2.2.2.1 Database Preparation *29*
2.2.2.2 Molecular Representation *31*
2.2.2.3 Model Architecture *34*
2.2.2.4 Results and Discussions *35*
2.3 Computer-Aided Aroma Design (CAAD) Framework *36*
2.3.1 CAAD for Pure Aromatic Chemicals *36*
2.3.1.1 Identify Product Attributes *36*
2.3.1.2 Convert Product Attributes to Properties and Their Constraints *38*
2.3.1.3 Choose Property Prediction Model for Estimating Properties *38*
2.3.1.4 Formulate MILP/MINLP Model *38*
2.3.1.5 Solve the Model Using Decomposition-Based Algorithm *38*

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

2.3.1.6 Verification *39*
2.3.2 CAAD for Mixture Aromatic Chemicals *39*
2.3.2.1 Identify Product Attributes *41*
2.3.2.2 Convert Product Attributes into Properties and Corresponding Constraints *42*
2.3.2.3 Establish Property Models *42*
2.3.2.4 Ingredient Screening *42*
2.3.2.5 Verification *43*
2.4 Case Studies *44*
2.4.1 Pure Aroma Design for Shampoo Additives *44*
2.4.2 Pure Aroma Design for the Ingredient in Insect Repellent Spray *45*
2.4.3 Mixture Aroma Design for Aroma Substitutes *48*
2.4.4 Mixture Aroma Design for Odor Tuning *51*
2.5 Conclusions *53*
2.A The CAS Number of Molecules and the Selected Groups *54*
2.B The Calculation Formula of Odor Score *56*
2.C The Parameters and Results of the ANN Model *57*
2.D The Designed Results of Molecules for Case Study 2 *59*
2.E Aroma Compounds for Ingredient Screening *61*
Acknowledgments *75*
References *75*

3 Machine Learning-Aided Rational Screening of Task-Specific Ionic Liquids *79*
Ruofan Gu and Zhen Song
3.1 Introduction *79*
3.2 Molecule Representation of ILs *80*
3.2.1 Groups or Fragment-Based Representation *81*
3.2.2 COSMO-Derived Descriptors or Fingerprints *83*
3.2.3 Machine-Learned Representations *83*
3.3 Machine Learning-Based Structure–Property Models *84*
3.3.1 Machine Learning for COSMO-Based Models *84*
3.3.2 Machine Learning for UNIFAC Extensions *86*
3.3.3 Pure Machine Learning Models *89*
3.4 Applications *90*
3.4.1 Computer-Aided IL Screening *90*
3.4.2 Computer-Aided IL Design *93*
3.4.3 Extensions to IL Mixtures *95*
3.5 Conclusion and Perspectives *97*
References *99*

4 Integration of Observed Data and Reaction Mechanisms in Deep Learning for Designing Sustainable Glycolic Acid *105*
Xin Zhou
4.1 Introduction *105*

4.2 Methodology *107*
4.2.1 Database Generation *109*
4.2.2 Deep Learning *111*
4.2.2.1 Deep Neural Networks *111*
4.2.2.2 Deep Belief Networks *112*
4.2.2.3 Fully Connected Residual Networks *114*
4.2.2.4 Random Forest *115*
4.2.3 Optimization and Prediction *116*
4.2.4 Life Cycle Multidimensional Evaluation *116*
4.3 Results and Discussion *117*
4.3.1 Data Analysis and Statistics Before Modeling *117*
4.3.1.1 Analysis of Experimental Data *117*
4.3.1.2 Data Dependence Analysis *117*
4.3.2 Model Comparison and Feature Important Analysis *118*
4.3.2.1 Model Comparison *118*
4.3.2.2 Feature Important Analysis *123*
4.3.3 Performance and Feature Analysis of the Optimized FC-ResNet–GA Model *125*
4.3.4 Process Multi-objective Optimization and Experimental Verification *126*
4.3.5 LCSA Based on the Optimized Parameters *128*
4.3.5.1 Original Life Cycle Framework *128*
4.3.5.2 Life Cycle Inventory Analysis *128*
4.3.5.3 Life Cycle Sustainable Interpretation and Assessment *129*
4.4 Conclusion *131*
4.A Pareto Optimization Set *132*
4.B Experimental Data *133*
4.C Construction Method of Process Simulation Database Using Reaction Mechanism *134*
4.C.1 Elimination of the Diffusion Limitations *136*
4.C.2 Reaction Kinetics *138*
References *139*

5 Innovation of Gas Separation Processes: Integrating Computational MOF Design and Adsorption Process Optimization *145*
Xiang Zhang and Teng Zhou
5.1 Introduction *145*
5.2 Step One: Descriptor Optimization *147*
5.2.1 Material–Property Relationship of MOFs *148*
5.2.1.1 MOF Representation *148*
5.2.1.2 Data-Driven Model for Single-Component Adsorption Isotherm *149*
5.2.1.3 Multicomponent Dual-Site Langmuir Isotherm Model *150*
5.2.2 Integrated Optimization of MOF Descriptors and PSA Operating Conditions *151*

5.2.2.1 Descriptor Design Space *151*
5.2.2.2 P/VSA Process Model *152*
5.2.2.3 Integrated Design Formulation *153*
5.2.3 Results *154*
5.2.3.1 Benchmark Process Using Cu-BTC *154*
5.2.3.2 Optimal MOF and Process from Integrated Design *154*
5.3 Step Two: MOF Matching *157*
5.3.1 Material–Property Relationship of MOFs *157*
5.3.1.1 Property–Performance Relationship for PE/PA Separation *157*
5.3.1.2 Validation with 471 CoRE MOFs *159*
5.3.2 From Computational MOF Design to Model-Based MOF Screening *161*
5.3.2.1 Identification of MOF Building Blocks *161*
5.3.2.2 *In Silico* Synthesis of Hypothetical MOFs *162*
5.3.2.3 MOF Screening via Validity and Feasibility Constraints *164*
5.3.2.4 MOF Screening via GCMC Simulations *165*
5.3.2.5 MOF Screening via PSA Process Optimization *165*
5.3.2.6 Optimal Results of SMOF-1 *165*
5.4 Conclusion *167*
References *168*

6 Reverse Design of Heat Exchange Systems Using Physics-Informed Machine Learning *173*
Chang He and Yunquan Chen
6.1 Introduction *173*
6.2 PINN-Based Inverse Design Method *176*
6.2.1 Overview of Inverse Design *176*
6.2.1.1 Standard Physics-Informed Neural Networks *177*
6.2.1.2 Design Optimization and Decision-making Methods *180*
6.3 Example 1: Finned Heat Sink Model *181*
6.3.1 System Description and Objectives *181*
6.3.2 Improved PINN Structure *185*
6.3.3 Results *185*
6.4 Illustrative Example 2: Tubular Air Cooler Model *191*
6.4.1 System Description and Objectives *191*
6.4.2 Improved PINN Structure *195*
6.4.3 Transfer Learning *196*
6.4.4 Results *199*
6.5 Conclusion *204*
References *205*

7 Integrating Incomplete Prior Knowledge into Data-Driven Inferential Sensor Models Under Variational Bayesian Framework *211*
Zhichao Chen, Hao Wang, Yiran Ma, Cheng Qiu, Le Yao, Xinmin Zhang, and Zhihuan Song
7.1 Introduction *211*

7.2 Literature Review *213*
7.2.1 Transport Process Scale *213*
7.2.2 Unit Operation Scale *214*
7.2.3 Overall Summary and Technical Gap *214*
7.3 Proposed Approach *214*
7.3.1 Loss Function Derivation *215*
7.3.2 Knowledge Representation *216*
7.3.2.1 Knowledge Description *216*
7.3.2.2 Knowledge Section via Self-Attention Mechanism *216*
7.3.2.3 Similarity of GCN and SAM *217*
7.3.2.4 Sampling from Posterior *219*
7.3.3 Model Expressions *221*
7.4 Experimental Results *223*
7.4.1 Evaluation Metrics *224*
7.4.2 Process Description *224*
7.4.3 Prior Knowledge Analysis *225*
7.4.4 Baseline Models *227*
7.4.5 Model Performance Comparisons *228*
7.4.6 Comparison with L1 and L2 Regularization Terms *229*
7.4.7 Sensitivity Analysis *230*
7.5 Conclusions *230*
7.A Experimental Settings *232*
References *233*

8 Data-Driven and Physics-Based Reduced-Order Modeling and Optimization of Cooling Tower Systems *239*
Chang He and Zhiqiang Wu
8.1 Introduction *239*
8.2 Full-Scale Physical Model of Cooling Towers *241*
8.3 Bi-level Reduced-Order Models *244*
8.3.1 Design of Optimal Experiments *245*
8.3.2 Multi-sample CFD Simulations *247*
8.3.3 Model Reduction *248*
8.4 Thermodynamic Performance Indicators *251*
8.5 Optimization Model *253*
8.6 Illustrative Example *254*
8.7 Conclusion *261*
References *261*

9 AI-Aided High-Throughput Screening and Optimistic Design of MOF Materials for Adsorptive Gas Separation *265*
Li Zhou, Min Cheng, Shihui Wang, and Xu Ji
9.1 Introduction *265*
9.2 Methodology *266*

9.2.1 Molecular Level Simulation and Screening Driven by Rigorous Molecular Simulation and Machine Learning *266*
9.2.1.1 Molecular Characterization *266*
9.2.1.2 Structural/Chemical Analysis-Based Prescreening *267*
9.2.1.3 Diversity Analysis and Dataset Splitting *268*
9.2.1.4 Molecular Simulation and Performance Evaluation Metrics *268*
9.2.1.5 AI-Aided Quantitative Structure–Property Relationship Development and Rapid Screening *269*
9.2.1.6 Process Level Simulation *270*
9.2.1.7 Reverse Molecular Design *270*
9.3 Case Studies *273*
9.3.1 High-Throughput Screening of Metal–Organic Frameworks for Hydrogen Purification *273*
9.3.1.1 Prescreening *273*
9.3.1.2 Rapid Screening *274*
9.3.1.3 Rigorous Validation *274*
9.3.1.4 Structure–Property Relationship Analysis *276*
9.3.1.5 Investigation on Practical Factors *277*
9.4 Conclusions *283*
References *283*

10 Surrogate Modeling for Accelerating Optimization of Complex Systems in Chemical Engineering *287*
Jianzhao Zhou and Jingzheng Ren
10.1 Introduction *287*
10.2 Surrogate Modeling Techniques *289*
10.2.1 Polynomial Regression (PR) *290*
10.2.2 Polynomial Chaos Expansion *291*
10.2.3 Kriging *291*
10.2.4 Radial Basis Functions (RBF) *292*
10.2.5 High-Dimensional Model Representation (HDMR) *293*
10.2.6 Decision Tree (DT) *294*
10.2.7 Support Vector Machine (SVM) *295*
10.2.8 Artificial Neural Network (ANN) *296*
10.3 Application of Surrogate Model in Optimization of Chemical Processes *297*
10.3.1 Reaction Engineering *297*
10.3.2 Separation Engineering *299*
10.3.3 Heat Exchange and Integration *300*
10.3.4 Process Design and Synthesis *301*
10.4 Conclusion *303*
Acknowledgment *303*
References *303*
