Christiane Barz

Risk-Averse Capacity Control in Revenue Management

With 32 Figures and 10 Tables

Springer

Contents

1 Introduction 1
1.1 The Basic Capacity Control Problem 4
1.1.1 Assumptions 4
1.1.2 The Attitude Towards Risk in Capacity Control 8
1.2 Risk-Aversion in Revenue Management 10
1.3 Chapter Organization 11

Part I Basic Principles

2 Markov Decision Processes and the Total Reward Criterion 19
2.1 Finite Horizon Markov Decision Processes 19
2.2 Infinite Horizon Markov Decision Processes 22
2.2.1 Markov Decision Processes with an Absorbing Set 23
2.2.2 Markov Decision Processes in a Random Environment . 25

3 Expected Utility Theory for Sequential Decision Making .. 29
3.1 Static Decision Problems 29
3.1.1 The Concept of Risk-Aversion 31
3.1.2 Special Utility Functions 32
3.2 Sequential Decision Problems 35
3.2.1 Additive Time-Separable Utility Functions 36
3.2.2 General Atemporal Utility Functions 38
3.2.3 Atemporal Exponential Utility Functions 40

Part II Expected Revenue Maximizing Capacity Control

4 Capacity Control in a Random Environment 47
4.1 The Decision Model 48
4.1.1 The Environmental Process and the Arrival of Requests 48

4.1.2 Accepting Requests 49
4.1.3 Cancelations, No-Shows, and Overbooking 49
4.1.4 The Underlying Markov Decision Process 51
4.2 Structural Results 52
4.3 Examples for the Random Environment 55
4.3.1 Exogenous Effects Based on the Evolution of a Markov Chain 55
4.3.2 Capacity Control Under Uncertainty 55
4.3.3 General Demand Patterns 56
4.4 Numerical Examples 57
4.4.1 Example 1: Capacity Control with Exogenous Effects .. 57
4.4.2 Example 2: Capacity Control with Dependent Demand . 59

5 Basic Single Resource Capacity Control Models in Revenue Management 63
5.1 The Dynamic Model 63
5.1.1 The Decision Model 64
5.1.2 Structural Results 65
5.1.3 A Numerical Example 69
5.2 The Static Model 70
5.2.1 The Decision Model 71
5.2.2 Structural Results 72
5.2.3 A Numerical Example 74
5.2.4 The EMSR Heuristics 75

Part III Expected Utility Maximizing Capacity Control

6 Capacity Control Maximizing Additive Time-Separable Utility 83
6.1 The Dynamic Model 83
6.1.1 Structural Results 84
6.1.2 Numerical Examples 86
6.2 The Static Model 88
6.2.1 Structural Results 89
6.2.2 Numerical Examples 93

7 Capacity Control Maximizing Atemporal Utility 95
7.1 The Dynamic Model 96
7.1.1 Structural Results 96
7.1.2 Numerical Examples 97
7.1.3 Structural Results in the Case of an Exponential Utility Function 100
7.1.4 Numerical Example in the Case of an Exponential Utility Function 105

7.2 The Static Model 106
7.2.1 Numerical Examples 107
7.2.2 Structural Results in the Case of an Exponential Utility Function 109
7.2.3 Numerical Example in the Case of an Exponential Utility Function 114
7.2.4 Possible Extensions of the EMSR Heuristics 118

8 An Extension: Capacity Control Under a General Discrete Choice Model of Consumer Behavior 125
8.1 The Capacity Control Model 125
8.2 Maximizing Expected Revenue 126
8.2.1 Efficient Sets 127
8.2.2 Structure of an Optimal Policy 128
8.2.3 A Numerical Example 129
8.3 Maximizing Expected Utility 131
8.3.1 Efficient Sets 133
8.3.2 Characterization of the Optimal Policy 133
8.3.3 A Numerical Example 136

9 Conclusion 139
9.1 Summary 139
9.2 Directions for Future Work 141

List of Symbols 143

An Extension of Stidham's Lemma 147

Stochastic Concavity and the Binomial Distribution 149
