

Contents

1	Introduction	1
2	Summary of Optical Data Storage and the Future Trend	5
2.1	Resolution Limit and Frequency Characteristics of Optical Storage	5
2.2	Background of Optical Data Storage	7
2.2.1	Digital Marks and Recording Code	7
2.2.2	Error Correction for Readout	10
2.2.3	Compact Disc System	15
2.2.4	Optical Pickup Heads	19
2.2.5	Disc Mastering and Molding	21
2.2.6	Multilayer Designing of Recordable Disc	22
2.2.7	Organic Dye Disc	26
2.2.8	Inorganic and Metal Alloy Disc	27
2.3	Several Approaches Towards Ultra-High Density Optical Recording	35
2.3.1	Beyond DVD	35
2.3.2	The Characteristics Requirement for Optical Near-Field Recording	37
3	Basic Theory of Optical Near-Field and Surface Plasmon Polaritons	39
3.1	Basic Theory of Optical Near-Field, Surface, and Local Plasmons	39
3.2	Computational Analysis Using Finite-Difference Time-Domain (FDTD) Method	49
3.3	Several Examples for the FDTD Computer Simulation	52
4	Near-Field Recording and Its Actual Methods	63
4.1	Fiber Probe and Flying Head Technologies	63
4.2	Solid Immersion Lens (SIL) and Its Related Technologies	71
4.2.1	SIL with Super-Hemispherical Lens	74
4.2.2	Designing of Optical Data Storage System with SIL	76

4.2.3	Solid Immersion Mirror (SIM)	77
4.2.4	Flying SIL on Optical Disc	78
4.3	Super-Resolution Near-Field Structure and Thin Film Technologies	80
4.3.1	Super-RENS Using an Optical Near-Field Aperture...	80
4.3.2	Super-RENS Using a Light Scattering Center	91
4.3.3	Super-RENS with Bubble Formation.....	96
5	Role of Surface Plasmons in Optical Disc	101
5.1	Surface Plasmons in Optical Disc and Scattering	101
5.2	Localized Plasmon Scattering with a Coupled Scattering Center	109
5.3	Localized Plasmons and Super-Resolution with Metallic Nanoparticles	110
6	Epilogue	115
	References	117
