Preface — V

1	Introduction to calculus problems — 1
1.1	A brief history of calculus — 1
1.2	Main topics in the book — 2
2	Functions and sequences — 5
2.1	Functions and mappings — 5
2.1.1	Definitions of functions — 5
2.1.2	MATLAB computation of commonly used transcendental functions — 6
2.1.3	MATLAB representation of functions — 6
2.1.4	Curves and surfaces of functions — 7
2.2	Descriptions of various functions — 8
2.2.1	Inverse functions — 8
2.2.2	Composite functions — 8
2.2.3	Describing piecewise functions — 10
2.2.4	Implicit functions — 12
2.2.5	Parametric equations — 14
2.2.6	Polar functions — 16
2.3	Odd and even functions — 17
2.4	Complex-valued functions and mapping — 18
2.4.1	Complex matrices and manipulations — 18
2.4.2	Mapping of complex-valued functions — 18
2.4.3	Riemann surfaces — 20
2.5	Numeric and functional sequences — 23
2.6	Exercises — 25
3	Limits — 27
3.1	Limits of univariate functions — 28
3.1.1	The ε - δ definition — 28
3.1.2	Limit computing with MATLAB — 30
3.1.3	Limits of composite functions — 32
3.1.4	Limits of sequences — 33
3.1.5	Limits of piecewise functions — 35
3.1.6	Infinitesimals and infinity — 35
3.2	Single-sided limits and continuity of functions — 36
3.2.1	Left and right limits — 36
3.2.2	Continuity of functions — 38
3.2.3	Interval limits — 40
3.2.4	Applications of continuity – assessment of equation solutions — 40

3.3	Singularities, poles and residues of complex functions —	42
3.3.1	Computation of singularities and poles —	42
3.3.2	Residues of complex functions —	43
3.4	Limits of multivariate functions —	45
3.4.1	Sequential limits —	45
3.4.2	Multiple limits and computations —	46
3.5	Exercises —	49
4	Derivatives and differentials —	53
4.1	Derivatives and high-order derivatives —	54
4.1.1	Derivatives and differentials —	54
4.1.2	Higher-order derivatives —	55
4.1.3	Derivatives of composite functions —	58
4.1.4	Derivatives of piecewise functions —	59
4.1.5	Derivatives of matrices —	60
4.2	Derivatives of parametric equations —	61
4.3	Partial derivatives of multivariate functions —	63
4.3.1	Partial derivatives —	63
4.3.2	Total differential —	66
4.3.3	Derivatives of composite functions —	66
4.4	Introduction to fields —	67
4.4.1	Scalar and vector fields —	68
4.4.2	Gradient, divergence, and curl —	68
4.4.3	Potentials of a vector field —	70
4.5	Derivative matrices —	71
4.5.1	Jacobian matrix —	71
4.5.2	Hessian matrix —	72
4.5.3	Laplacian operators for scalar fields —	72
4.6	Partial derivatives of implicit functions —	73
4.6.1	First-order derivative of an implicit function —	73
4.6.2	Higher-order derivatives of implicit functions —	74
4.6.3	Partial derivatives of simultaneous implicit functions —	76
4.7	Applications of derivatives and differentials —	79
4.7.1	Extreme value problem —	79
4.7.2	Newton–Raphson iterative algorithm —	82
4.7.3	Tangent planes and normal lines —	83
4.8	Exercises —	85
5	Integrals —	87
5.1	Indefinite integrals of univariate functions —	87
5.2	Definite and improper integrals —	92
5.2.1	Definite integrals —	92

5.2.2	Infinite and improper integrals — 95
5.3	Multiple integrals — 98
5.3.1	Multiple indefinite integrals — 98
5.3.2	Constructions of undetermined polynomials — 99
5.3.3	Computation of multiple integrals — 100
5.3.4	Conversions of integration regions — 102
5.4	Applications of definite integrals — 103
5.4.1	Computation of arc length — 103
5.4.2	Computation of volume — 105
5.4.3	Volume and mass computation — 106
5.4.4	Computation of probability distribution — 108
5.4.5	An introduction to integral transforms — 109
5.5	Path integrals — 109
5.5.1	Type I path integral — 110
5.5.2	Type II path integral — 112
5.6	Surface integrals — 114
5.6.1	Type I surface integrals — 114
5.6.2	Type II surface integrals — 116
5.7	Exercises — 118
6	Series and function fitting — 121
6.1	Series sums — 121
6.1.1	Number series sums — 121
6.1.2	Sum of infinite series — 125
6.1.3	Sum of functional series — 127
6.1.4	Special infinite term problems — 128
6.2	Convergence tests for infinite series — 131
6.2.1	General description of a positive series — 131
6.2.2	Convergence tests for positive series — 131
6.2.3	Convergence test for alternating series — 133
6.2.4	Convergence interval of a functional series — 134
6.3	Products of sequences — 135
6.3.1	Products of number sequences — 135
6.3.2	Products of functional sequences — 136
6.3.3	Convergence test for the products of positive sequences — 137
6.4	Taylor series — 138
6.4.1	Taylor series expansions for univariate functions — 139
6.4.2	Taylor series for multivariate functions — 142
6.5	Fourier series expansions — 144
6.5.1	Mathematical description of Fourier series — 144
6.5.2	MATLAB implementation of Fourier series — 145
6.6	Rational function approximation of univariate functions — 148

6.6.1	Continued fraction expansions —	148
6.6.2	Padé approximations —	153
6.7	Laurent series —	155
6.7.1	Laurent series expansion —	155
6.7.2	Laurent series of rational functions —	157
6.8	Exercises —	159
7	Numerical derivatives and differentials —	163
7.1	Numerical derivative algorithms —	163
7.1.1	Forward and backward difference algorithms —	164
7.1.2	Central difference algorithms with $o(h^2)$ precision —	164
7.1.3	Central difference algorithm with $o(h^4)$ precision —	165
7.1.4	Central difference algorithms of higher precision —	166
7.1.5	Deriving high-order high precision algorithms —	167
7.1.6	High precision forward and backward difference algorithms —	169
7.2	MATLAB implementations of the numerical derivative algorithms —	172
7.2.1	Implementation of the $o(h^2)$ algorithms —	172
7.2.2	Implementation of the seven-point central difference algorithms —	174
7.2.3	Implementation of forward difference numerical derivative algorithms —	176
7.3	Numerical derivatives of any orders —	177
7.4	Numerical partial derivatives of 2D functions —	179
7.4.1	Gradient computation —	179
7.4.2	High precision algorithms for derivatives with respect to a single variable —	181
7.4.3	Numerical computation of mixed partial derivatives —	183
7.4.4	Numerical computation of high-order mixed partial derivatives —	184
7.5	Spline interpolation and numerical derivatives —	185
7.5.1	Cubic spline —	186
7.5.2	B-splines —	189
7.5.3	Numerical derivatives with splines —	190
7.5.4	Unequally spaced and scattered samples —	193
7.6	Exercises —	195
8	Numerical integrals —	197
8.1	Numerical integrals from samples —	197
8.1.1	Direct computation of numerical definite integrals —	197
8.1.2	Reconstruction of integral function —	200
8.1.3	High precision numerical integration algorithm for equally spaced samples —	201
8.2	Numerical integrals of univariate functions —	203
8.2.1	Simple numerical integral problems —	204

8.2.2	MATLAB solutions of numerical integral problems —	205
8.2.3	Numerical computation of improper integrals —	210
8.2.4	Numerical integrals for integrands with parameters —	212
8.2.5	Numerical solutions of integral functions —	213
8.3	Numerical computation of double integrals —	214
8.3.1	Computing double integrals —	215
8.3.2	Computation of double integral functions —	216
8.3.3	Evaluations of double integrals in different order —	218
8.4	Numerical computation of multiple integrals —	219
8.4.1	Numerical triple integrals —	219
8.4.2	Triple integrals of integrands with parameters —	221
8.4.3	Multiple integrals —	222
8.4.4	Numerical solutions of some multiple integrals with variable bounds —	224
8.5	Other numerical methods for multiple integrals —	225
8.5.1	Numerical integral approximations with Monte Carlo method —	226
8.5.2	Spline-based integral evaluations —	228
8.5.3	Numerical evaluations of multiple integrals —	231
8.6	Exercises —	232

9 Integral transforms — 235

9.1	Laplace transforms and their inverses —	235
9.1.1	Definition and properties of Laplace transform —	236
9.1.2	Computer solutions of Laplace transforms —	237
9.1.3	Solving differential equations with Laplace transform —	240
9.2	Numerical solutions of Laplace transform problems —	242
9.2.1	Numerical inverse Laplace transform —	243
9.2.2	Ideas of feedback control systems —	243
9.2.3	Numerical Laplace transforms —	244
9.2.4	Computation of irrational systems —	247
9.3	Fourier transforms and their inverses —	248
9.3.1	Definition and properties of Fourier transforms —	249
9.3.2	Computer evaluation of Fourier transform —	249
9.3.3	Fourier sine and cosine transforms —	251
9.3.4	Discrete Fourier sine and cosine transforms —	252
9.3.5	Fast Fourier transform —	253
9.4	Computation of other integral transforms —	255
9.4.1	Mellin transform —	255
9.4.2	Computation of Hankel transforms —	258
9.5	The z transform and its inverse —	259
9.5.1	Definition and properties of z transforms —	260
9.5.2	Computer evaluation of z transforms —	260

9.5.3	Bilateral z transform —	262
9.5.4	Numerical inverse z transforms for rational functions —	263
9.6	Exercises —	264
10	Introduction to fractional calculus —	267
10.1	Definitions in fractional calculus —	268
10.1.1	Why fractional calculus? —	268
10.1.2	Definitions —	269
10.2	Properties and relationships among different fractional calculus definitions —	270
10.3	Numerical implementation of Grünwald–Letnikov derivatives —	272
10.3.1	Simple Grünwald–Letnikov definition evaluation —	272
10.3.2	High precision algorithms and implementation —	272
10.3.3	Quantitative comparisons of different algorithms —	277
10.4	Numerical computation of Caputo derivatives —	279
10.5	Oustaloup filter algorithms and applications —	282
10.5.1	Oustaloup filter approximations —	283
10.5.2	Filter for Caputo derivative fitting —	285
10.5.3	Simulink-based Caputo derivative computation —	286
10.6	Numerical computation of even higher-order derivatives and integrals —	288
10.7	Exercises —	290
Bibliography — 291		
MATLAB function index — 293		
Index — 297
