Preface — V

Brief introduction to the author — XIII

1 Introduction — 1

- 1.1 Definition and classification of cementitious materials — 1
- 1.2 The role of cementitious materials in national economy — 1
- 1.3 The brief history of cementitious materials — 2
- 1.4 The development of cementitious materials science — 4

2 Common Portland cement — 7

- 2.1 The invention and production of cement — 7
 - 2.1.1 The invention of cement — 7
 - 2.1.2 The process of cement — 9
- 2.2 Composition of Portland cement clinker — 12
 - 2.2.1 Chemical and mineral compositions of clinker — 12
 - 2.2.2 Modulus value of clinker — 17
 - 2.2.3 Calculation and conversion of mineral composition of clinker — 23
- 2.3 Raw materials and raw materials proportioning of Portland cement — 30
 - 2.3.1 Raw materials of cement — 30
 - 2.3.2 Clinker composition design — 41
 - 2.3.3 Proportioning calculation of raw materials — 45
- 2.4 Calcination of Portland cement clinker — 49
 - 2.4.1 Drying and dehydration — 49
 - 2.4.2 Decomposition of carbonate — 50
 - 2.4.3 Solid-phase reaction — 53
 - 2.4.4 Calcination of clinker — 54
 - 2.4.5 Clinker cooling — 57
 - 2.4.6 The role of other components — 58
 - 2.4.7 Main equipments for clinker calcination — 62
- 2.5 Production and standards for common Portland cement — 69
 - 2.5.1 Cement admixture — 70
 - 2.5.2 Definition, classification and specifications for common Portland cement — 82
 - 2.5.3 Portland limestone cement — 90
 - 2.5.4 Grinding of cement — 91
- 2.6 Hydration and hardening of general-purpose Portland cement — 94

2.6.1	Hydration of cement clinkers —	95
2.6.2	Hydration of Portland cement —	106
2.6.3	Hydration and hardening of Portland cement with supplementary cementitious materials —	111
2.6.4	Hydration rate —	115
2.6.5	Hardened cement paste —	121
2.7	Properties of ordinary Portland cement —	153
2.7.1	Density —	153
2.7.2	Fineness —	155
2.7.3	Water demand (consistency and fluidity) —	159
2.7.4	Setting time —	160
2.7.5	Strength —	168
2.7.6	Volume change —	175
2.7.7	Water retention and bleeding —	180
2.7.8	Hydration heat —	181
2.7.9	Heat resistance —	183
2.7.10	Permeability resistance —	184
2.7.11	Frost resistance —	187
2.7.12	Erosion resistance —	188
	Problems —	199

3 Characteristic cement and special cement — 207

3.1	Aluminate and high-temperature-resistant cement —	207
3.1.1	Aluminate cement —	207
3.1.2	Refractory castable of phosphoric acid and phosphate —	210
3.1.3	Refractory castable of water glass —	212
3.2	Fast hardening and high-strength cement —	213
3.2.1	Fast hardening Portland cement —	213
3.2.2	Fast hardening sulfoaluminate cement —	215
3.2.3	Fast hardening aluminoferrite cement —	219
3.2.4	Rapid hardening fluoroaluminate cement —	221
3.2.5	Rapid hardening and high-strength aluminat cement —	224
3.2.6	Super-fast hardening and adjustable setting aluminat cement —	226
3.2.7	Special high-strength cement —	227
3.3	Sulfate-resistant cement, moderate-heat and low-heat cement and road cement —	228
3.3.1	Sulfate-resistant cement —	229
3.3.2	Moderate- and low-heat Portland cement —	232
3.3.3	Low-heat and microexpanding cement —	234

3.3.4	Low-heat slag Portland cement —	236
3.3.5	Road Portland cement —	237
3.3.6	Steel slag cement for pavement —	241
3.4	Expansive and self-stressing cements —	243
3.4.1	Basic principle of expansive cement production —	245
3.4.2	Types of expansive cement —	247
3.4.3	Production processes and properties —	248
3.5	Oil well cement —	254
3.6	Decoration cement —	258
3.6.1	White Portland cement —	259
3.6.2	Color cement —	265
3.7	Masonry cement —	266
3.7.1	Chinese standards for masonry cement —	267
3.7.2	Industrial standards for steel slag masonry cement —	268
3.8	Radiation-proof cement —	268
3.8.1	Barium cement —	269
3.8.2	Boron-containing cement —	270
3.8.3	Strontium cement —	271
3.8.4	Conducting and magnetic cement —	271
3.8.5	Nonmagnetic cement —	272
3.9	Acid-proof cement —	273
3.9.1	Water glass acid-proof cement —	273
3.9.2	Sulfurous acid-proof cement —	275
3.9.3	Polymer acid-proof cement —	276
3.10	Low-alkalinity sulfoaluminate cement —	276
	Problems —	278
4	Gypsum —	281
4.1	Raw materials for the production of gypsum —	281
4.1.1	Natural gypsum —	282
4.1.2	Industrial by-product gypsums —	283
4.2	Production of gypsum cementitious materials —	293
4.2.1	Dehydration transformation of gypsum —	293
4.2.2	Preparation of HH —	297
4.3	Building gypsum —	299
4.3.1	Production of building gypsum —	299
4.3.2	Performance and influencing factors of building gypsum —	302
4.4	Hydration and hardening process of HH —	308
4.4.1	Hydration of gypsum cementitious materials —	308

- 4.4.2 Hydration and mechanism of setting and hardening of dehydrated phases — **311**
- 4.4.3 Factors influencing the hydration of HH — **312**
- 4.4.4 Hardening of gypsum paste — **313**
- 4.5 Activation of anhydrite and its applications — **316**
- 4.5.1 Activation methods of anhydrite — **316**
- 4.5.2 Anhydrite cementing materials — **317**
- 4.6 Structure and properties of hardened gypsum paste — **317**
- 4.6.1 Structure of hardened gypsum paste — **317**
- 4.6.2 Strength of hardened gypsum paste — **318**
- 4.6.3 Water resistance of hardened gypsum paste — **319**
- 4.7 Applications of gypsum cementitious materials — **320**
- 4.7.1 Gypsum cementitious materials — **320**
- 4.7.2 Gypsum products — **320**
- 4.8 Acceptance check, storage and transportation of gypsum — **323**
Problems — **323**

5 Lime — 325

- 5.1 Raw materials for production of lime — **325**
- 5.2 Production of lime — **326**
- 5.2.1 Calcination of calcium carbonate — **326**
- 5.2.2 Types of lime — **329**
- 5.2.3 Characteristics of architectural lime — **331**
- 5.2.4 Technical specifications for architectural lime — **331**
- 5.2.5 Activity of lime — **333**
- 5.3 Hydration of lime — **335**
- 5.3.1 Hydration of lime — **335**
- 5.3.2 Characteristics of lime hydration — **337**
- 5.4 Structure formation of lime paste — **341**
- 5.4.1 Dissolving and dispersing of lime by water action — **341**
- 5.4.2 Setting structure formation of lime paste — **342**
- 5.4.3 Crystalline structure formation of lime paste — **344**
- 5.5 Hardening of lime paste — **345**
- 5.5.1 Crystallization and attached strength by drying — **345**
- 5.5.2 Carbonization — **345**
- 5.6 Applications of lime — **346**
- 5.6.1 Manufacture of architectural quicklime powders — **346**
- 5.6.2 Production of slaked lime powder or slaked lime slurry — **347**
- 5.6.3 Preparation of lime mortar and grout — **349**

- 5.6.4 Preparation of lime soil and trinity mixture fill — 349
- 5.6.5 Production of silicate products — 350
- 5.6.6 Manufacture of carbonized products — 350
- 5.7 Acceptance check, storage, safekeeping and transportation of lime — 350
- Problems — 351

- 6 Magnesia cementitious materials — 353**
 - 6.1 Definition of magnesia cementitious materials — 353
 - 6.2 Raw materials for the production of magnesia cementitious materials — 354
 - 6.3 Calcination of magnesia cementitious materials — 355
 - 6.4 Hydration of magnesia cementitious materials — 358
 - 6.4.1 Mixing liquid for hydration — 358
 - 6.4.2 Hydrated products of magnesia cement — 361
 - 6.4.3 Strength of hardened magnesia cement — 362
 - 6.5 Properties of magnesia cementitious materials — 363
 - 6.5.1 Hydration activity — 363
 - 6.5.2 Cohesive properties — 364
 - 6.5.3 Heat and frost resistance — 365
 - 6.5.4 Wear resistance — 365
 - 6.5.5 Efflorescence — 365
 - 6.5.6 Resistance to water — 366
 - 6.6 Applications of magnesia cementitious materials — 367
 - 6.6.1 Magnesia cement particleboard and excelsior board — 367
 - 6.6.2 Magnesia cement floor — 367
 - 6.6.3 Magnesia cement concrete and magnesia cement products — 368
 - 6.6.4 Magnesia fiber composites — 369
 - 6.6.5 Magnesia concrete solar stove — 369
 - 6.7 Storage and transportation of magnesia cementitious materials — 369
 - Problems — 370

- 7 Other binders — 371**
 - 7.1 Water glass — 371
 - 7.1.1 Technical parameters of water glass — 371
 - 7.1.2 Classifications and preparation methods of water glass — 372
 - 7.1.3 The properties of water glass — 374
 - 7.1.4 Hardening process of water glass — 375
 - 7.1.5 Applications of water glass — 376

XII — Contents

7.2	Phosphate cement — 377
7.2.1	Magnesium phosphate cementitious materials — 378
7.2.2	Aluminum phosphate cement — 381
7.3	Geopolymer — 384
7.3.1	Hydration process and hydration products of geopolymer — 385
7.3.2	Mechanical properties of geopolymers — 387
7.3.3	Applications of geopolymers — 390
7.4	Polymer-modified inorganic binders — 391
	Problems — 393

Appendix — 395

Bibliography — 397

Index — 399
