Preface — V

1	Introduction and preliminaries — 1
1.1	Partial order relations, partial order sets, and Zorn lemma — 1
1.2	Metric spaces — 2
1.3	Topological spaces — 4
1.3.1	Point sets in topological spaces — 4
1.3.2	Topological bases, subbases and neighborhood bases — 8
1.3.3	Directed sets, nets, and convergence of nets — 10
1.3.4	Continuous mappings and homeomorphism mappings — 11
1.4	Topological linear spaces — 14
1.4.1	Linear spaces — 14
1.4.2	Normed linear spaces and Banach spaces — 17
1.4.3	Hilbert spaces — 23
1.4.4	Topological linear spaces — 27
1.5	Lower semicontinuity, convexity, and conjugate functions — 29
1.6	Differential calculus on Banach spaces — 32
1.7	Subdifferentials of convex functions — 34
1.8	Geometry of Banach spaces — 37
1.8.1	Convexity of Banach spaces — 37
1.8.2	Duality mappings — 40
1.8.3	Differentiability of norms and smoothness of spaces — 43
1.8.4	Geometry constants in Banach spaces — 47
1.8.5	Banach limits — 48
1.8.6	Projection mappings — 49
1.9	Some classes of nonlinear mappings — 52
1.9.1	Nonexpansive mappings — 54
1.9.2	Accretive operators — 58
1.9.3	Monotone mappings — 62
1.9.4	Pseudocontractive mappings — 75
1.10	Some useful lemmas — 76
1.11	Exercises — 77
2	Iterative methods for fixed points of nonexpansive mappings in Hilbert spaces — 81
2.1	Basic properties for nonexpansive mappings and their subclasses — 81
2.2	Opial conditions and asymptotic centers — 86
2.3	The demiclosedness principle and fixed point theorems — 91
2.4	Iterative methods of fixed points — 92

- 2.4.1 Weak convergence theorems — 93
- 2.4.2 Strong convergence theorems — 98
- 2.5 Fixed points of nonexpansive nonself-mappings — 118
- 2.6 Iterative methods for fixed points of quasi-nonexpansive mappings — 123
- 2.7 Applications — 130
- 2.7.1 Convex minimization problems — 131
- 2.7.2 Monotone variational inequality problems — 132
- 2.7.3 Split feasibility problems — 134
- 2.8 Remark — 138
- 2.9 Exercises — 138

- 3 Iterative methods for zeros of monotone mappings and fixed points of pseudocontractive mappings in Hilbert spaces — 143**
- 3.1 Basic properties of monotone mappings — 143
- 3.1.1 Local boundedness and hemicontinuity — 143
- 3.1.2 Characteristic description for monotone mappings — 147
- 3.1.3 Demiclosedness principle for monotone mappings — 148
- 3.1.4 Resolvents and Yosida approximations — 151
- 3.2 Criteria of maximal monotone mappings — 157
- 3.3 Acute angle principle for monotone mappings — 162
- 3.4 Monotone variational inequalities — 170
- 3.5 Fixed point theory of pseudocontractive mappings — 184
- 3.6 Iterative methods of fixed points for pseudocontractive mappings and zeros for monotone mappings — 190
- 3.6.1 Normal Mann iterative method — 190
- 3.6.2 Ishikawa iterative method — 193
- 3.6.3 Bruck regularization iterative method — 197
- 3.7 Remarks — 205
- 3.8 Exercises — 205

- 4 Fixed point theory and iterative methods for fixed points of nonexpansive mappings in Banach spaces — 209**
- 4.1 Several celebrated fixed point theorems — 209
- 4.2 Normal Mann iterative method and Reich's weak convergence theorem — 211
- 4.3 Halpern iterative method and its strong convergence theorems — 215
- 4.4 Moudafi's viscosity iterative method — 228
- 4.5 Iterative methods for common fixed points of a family of nonexpansive mappings in Banach spaces — 236
- 4.6 Iterative methods of common fixed points for a nonexpansive semigroup in Banach spaces — 248

- 4.7 Iterative methods of fixed points for nonexpansive
nonself-mappings — 253
- 4.8 Remarks — 259
- 4.9 Exercises — 259

- 5 Iterative methods for zeros for accretive operators and fixed points of
pseudocontractive mappings in Banach spaces — 263**
 - 5.1 Characterizations of accretive operators — 263
 - 5.2 Nonlinear semigroups of ω -type — 264
 - 5.3 Zero point theorems of accretive operators — 265
 - 5.4 Demiclosedness of accretive operators — 269
 - 5.5 The existence and convergence of paths for accretive operators — 272
 - 5.6 Iterative methods of zero points for accretive operators — 277
 - 5.6.1 The steepest decent method — 277
 - 5.6.2 The Bruck regularization iterative method — 280
 - 5.6.3 The iterative methods based on APPA — 288
 - 5.7 Iterative methods for variational inequalities with accretive
operators — 296
 - 5.7.1 Two kinds of variational inequality problems — 296
 - 5.7.2 Tools to solve the variational inequality — 299
 - 5.7.3 Strong convergence theorems — 301
 - 5.8 Fixed points of strongly pseudocontractive mappings — 312
 - 5.9 Demiclosedness principles for pseudocontractive mappings — 315
 - 5.10 Fixed point theorems for pseudocontractive mappings — 316
 - 5.11 Iterative methods for fixed points of pseudocontractive
mappings — 318
 - 5.12 Remarks — 327
 - 5.13 Exercises — 327

- 6 Iterative methods for zeros of maximal monotone operators in Banach
spaces — 331**
 - 6.1 Lyapunov functional and generalized projection — 331
 - 6.2 Rockafellar–Mann iterative method and its weak convergence
theorem — 335
 - 6.3 Rockafellar–Halpern iterative method and its strong convergence
theorem — 338
 - 6.4 Rockafellar–Haugazeau iterative method and its strong convergence
theorem — 342
 - 6.5 Minimizers of convex functionals and monotone variational
inequalities — 345
 - 6.6 Remark — 348
 - 6.7 Exercises — 348
