

Contents

Preface — V

Brief Introduction — VII

Chapter 1

Introduction — 1

- 1.1 The significance of developing and utilizing solar energy — 1**
 - 1.1.1 Fossil fuels are facing a crisis of depletion — 1**
 - 1.1.2 Protecting the ecological environment gets attention — 5**
 - 1.1.3 Limitations of conventional power grids — 13**
- 1.2 Characteristics of solar energy electrical generation — 15**
 - 1.2.1 Advantages of solar energy electrical generation — 15**
 - 1.2.2 Disadvantages of solar energy electrical generation — 16**
 - 1.2.3 Types of solar energy electrical generation — 17**
 - 1.2.3.1 Concentrator solar power generation — 17**
 - 1.2.3.1.1 Solar trough thermal power generation — 17**
 - 1.2.3.1.2 Solar tower thermal power generation — 18**
 - 1.2.3.1.3 Solar dish-type thermal power generation — 18**
 - 1.2.3.2 Solar PV electrical generation — 18**
- 1.3 The development of world's PV industry in recent years — 19**
 - 1.3.1 PV cell production — 19**
 - 1.3.2 PV application market — 22**
- 1.4 The development of China's PV industry — 25**
- 1.5 PV power generation by some countries' organizations — 26**
 - 1.5.1 Japan — 26**
 - 1.5.2 European Union — 27**
 - 1.5.3 International PV technology roadmap steering committee — 31**
 - 1.5.4 USA — 32**
 - 1.5.5 China — 33**
 - 1.5.6 International Energy Agency — 35**
- References — 38**
- Exercises — 39**

Chapter 2

Solar radiation — 41

- 2.1 Overview of the Sun — 41**
- 2.2 The relative movement of the Sun and the Earth — 43**
 - 2.2.1 The overview of the Earth — 43**
 - 2.2.2 Apparent solar time — 44**
 - 2.2.3 Sunrise and sunset patterns — 47**

2.3	Celestial coordinate system — 47
2.3.1	Equatorial coordinate system — 48
2.3.1.1	Hour angle ω — 48
2.3.1.2	Sun declination angle δ — 49
2.3.2	Horizontal coordinate system — 50
2.3.2.1	Zenith angle θ_z — 51
2.3.2.2	Altitude angle α_s — 51
2.3.2.3	Azimuth angle γ_s — 51
2.3.3	The calculation of solar parameters — 51
2.3.3.1	The calculation of altitude angle — 51
2.3.3.2	The calculation of azimuth angle — 52
2.3.3.3	The hour angle at sunrise and sunset ω_s — 53
2.3.3.4	Sunshine duration N — 53
2.3.3.5	Azimuth angle at sunrise and sunset — 54
2.3.3.6	Solar incidence angle — 54
2.4	Angle of tracking surface — 56
2.5	Solar radiation — 59
2.5.1	Solar radiation outside the atmosphere — 59
2.5.1.1	Solar constant — 59
2.5.1.2	Solar radiation reaching extraterrestrial surface — 60
2.5.1.3	Air mass — 63
2.5.2	Solar irradiance at the ground surface — 65
2.5.2.1	Atmospheric transparency — 65
2.5.2.2	Normal solar irradiance at the ground surface — 66
2.5.2.3	Direct solar irradiance on horizontal surface — 66
2.5.2.4	Diffuse solar irradiance on the horizontal surface — 67
2.5.2.5	Total solar irradiance on the horizontal surface — 67
2.5.2.6	Clarity index — 67
2.5.2.7	The ratio of diffuse irradiation to total irradiation — 68
2.5.2.7.1	The ratio of hourly diffuse irradiation to total irradiation — 68
2.5.2.7.2	The ratio of daily diffuse irradiation to total irradiation — 68
2.5.2.7.3	Ratio of monthly diffuse irradiation to total irradiation — 69
2.5.3	Hourly solar irradiation on tilt surfaces — 70
2.5.3.1	Hourly solar beam irradiation on tilt surfaces $I_{T,b}$ — 70
2.5.3.2	Ratio of hourly beam radiation on tilted to horizontal surface R_b — 71
2.5.3.3	Hourly diffuse irradiation on tilt planes — 72
2.5.3.4	Ground reflected irradiation — 72
2.5.3.5	Total hourly solar irradiation on tilt planes – sky isotropic model — 73
2.5.3.6	Total hourly solar irradiation on tilt planes – sky anisotropy model — 73

2.5.3.6.1	HDKR model —	73
2.5.3.6.2	Perez model —	74
2.5.4	Monthly mean solar irradiation on tilt plane —	75
2.5.4.1	Sky isotropic model —	75
2.5.4.2	Sky anisotropy model —	76
2.5.4.2.1	Klein and Theilacker's method —	76
2.5.4.2.2	RETScreen method —	79
	References —	81
	Exercises —	81

Chapter 3

Basic principles of crystalline silicon PV cells — 83

3.1	Classification of PV cells —	83
3.1.1	Classification according to the substrate materials —	83
3.1.1.1	Crystalline silicon PV cells —	83
3.1.1.2	Monocrystalline silicon PV cells —	83
3.1.1.3	Polycrystalline silicon PV cells —	84
3.1.1.4	Quasi-monocrystalline silicon PV cell —	84
3.1.1.5	Silicon-based thin-film PV cells —	84
3.1.1.5.1	Amorphous silicon PV cells —	84
3.1.1.5.2	Microcrystalline silicon ($\mu\text{c-Si}$) PV cells —	85
3.1.1.5.3	Compound PV cells —	86
3.1.1.5.3.1	Monocrystalline compound PV cells —	86
3.1.1.5.3.2	Polycrystalline compound PV cells —	86
3.1.2	Classification according to the structure of PV cells —	86
3.1.2.1	Homojunction PV cells —	86
3.1.2.2	Heterojunction PV cells —	86
3.1.2.3	Schottky junction PV cells —	86
3.1.2.4	Composite junction PV cells —	86
3.1.3	Classification according to the application of PV cells —	87
3.1.3.1	Space PV cells —	87
3.1.3.2	Terrestrial PV cells —	87
3.2	Working principle of PV cells —	87
3.2.1	Semiconductor —	87
3.2.2	Bandgap structure —	89
3.2.3	Intrinsic semiconductors and doped semiconductors —	91
3.2.4	N-type and P-type semiconductors —	94
3.2.4.1	N-type semiconductors —	94
3.2.4.2	P-type semiconductors —	95
3.2.5	P-N junctions —	96
3.2.5.1	The majority carrier diffusion motion —	96
3.2.5.2	Minority carrier drift motion —	96

3.2.6	Photovoltaic effect —	97
3.2.7	PV cell photoelectric conversion principle —	99
3.2.8	Structure of crystalline silicon PV cells —	100
3.3	PV cell electrical characteristics —	101
3.3.1	Standard test conditions —	101
3.3.2	PV cell equivalent circuit —	101
3.3.3	The main technical parameters of PV cells —	104
3.3.3.1	Current–voltage curve —	104
3.3.3.2	Maximum power point —	104
3.3.3.3	Open-circuit voltage —	107
3.3.3.4	Short-circuit current —	107
3.3.3.5	Fill factor (curve factor) —	107
3.3.3.6	PV cell conversion efficiency —	108
3.3.3.7	Current temperature coefficient —	108
3.3.3.8	Voltage temperature coefficient —	111
3.3.3.9	Power temperature coefficient —	111
3.3.3.10	Effect of solar irradiance —	113
3.3.4	Factors affecting PV cell conversion efficiency —	114
3.3.4.1	Bandgap —	114
3.3.4.2	Temperature —	115
3.3.4.3	Minority carrier lifetime —	116
3.3.4.4	Light intensity —	116
3.3.4.5	Doping concentration and profile distribution —	116
3.3.4.6	Surface recombination rate —	117
3.3.4.7	Series and shunt resistors —	118
3.3.4.8	Absorption of light —	119
	References —	120
	Exercises —	120

Chapter 4

Thin-film PV cells — 123

4.1	Introduction —	123
4.1.1	Advantages and disadvantages of thin-film PV cells —	123
4.1.1.1	Low production cost —	123
4.1.1.2	Less material —	123
4.1.1.3	Simple manufacturing process —	123
4.1.1.4	Lower electricity consumption during production —	124
4.1.1.5	Better high-temperature performance —	124
4.1.1.6	Better low irradiance performance —	124
4.1.1.7	Suitable for BIPV —	124
4.1.2	Categories of thin-film PV cells —	125
4.2	Amorphous silicon PV cell —	125

4.2.1	Development history of a-Si PV cell —	125
4.2.2	Structure of a-Si PV cell —	126
4.2.2.1	Single-junction a-Si PV cell —	126
4.2.2.2	Multijunction PV cell —	128
4.2.2.2.1	a-Si/a-Si double-junction structure —	128
4.2.2.2.2	a-Si/a-SiGe double-junction structure —	128
4.2.2.2.3	a-Si/ μ c-Si double-junction structure [5] —	130
4.2.2.2.4	a-Si/a-SiGe/a-SiGe triple-junction structure —	132
4.2.2.2.5	a-Si/a-SiGe/ μ c-Si triple-junction structure —	132
4.2.2.2.6	a-Si/nc-Si/ μ c-Si triple-junction structure —	134
4.2.3	Fabrication of a-Si thin-film PV cell —	134
4.2.4	Commercialization of a-Si thin-film PV cell —	134
4.3	Cadmium telluride PV cell —	135
4.3.1	Characteristics of CdTe materials and cells —	135
4.3.2	Structure of CdTe PV cell —	136
4.3.3	Manufacturing of CdTe thin-film PV cells —	138
4.3.3.1	Manufacture process of CdTe thin-film PV cell —	138
4.3.3.2	CdTe thin-film preparation process —	138
4.3.3.2.1	Vapor transport deposition —	138
4.3.3.2.2	Closed-space sublimation —	140
4.3.3.2.3	Magnetron sputtering —	140
4.3.4	Commercialization of CdTe thin-film PV modules —	141
4.4	Copper indium gallium selenide thin-film PV cell —	142
4.4.1	Characteristics of CIGS PV cell —	143
4.4.2	Structure of a CIGS thin-film PV cell —	143
4.4.3	Fabrication of CIGS thin-film PV cell —	144
4.4.3.1	Manufacturing process of CIGS thin-film PV cell —	144
4.4.3.2	Preparation of CIGS film —	145
4.4.3.2.1	Multicomponent co-distillation —	146
4.4.3.2.2	Sputtering and selenization —	148
4.4.4	Commercialization of CIGS thin-film PV cell —	149
4.5	Perovskite PV cells —	152
4.5.1	Development history of perovskite PV cell —	152
4.5.2	Features of perovskite PV cell —	154
4.5.3	Commercialization of perovskite PV technology and its problems —	155
4.6	Dye-sensitized cell —	157
4.7	Organic semiconductor PV cell —	160
4.8	Market and development prospects of thin-film PV cell —	160
	References —	161
	Exercises —	162

Chapter 5

Concentrator PV and solar tracker — 163

- 5.1 CPV power generation — 163
 - 5.1.1 Advantages and disadvantages of CPV — 164
 - 5.1.1.1 Advantages — 164
 - 5.1.1.2 Disadvantages — 165
 - 5.1.2 CPV system components — 165
 - 5.1.2.1 CPV cells — 165
 - 5.1.2.2 Concentrator — 168
 - 5.1.2.3 Solar tracker — 173
 - 5.1.2.4 Cooling components — 174
 - 5.1.3 CPV systems — 176
 - 5.1.3.1 Low-concentration PV (LCPV) — 178
 - 5.1.3.2 Medium-concentration photovoltaic (MCPV) — 181
 - 5.1.3.3 HCPV system — 183
 - 5.1.4 Current situation of CPV — 189
- 5.2 Solar tracker system — 190
 - 5.2.1 Classification of trackers — 190
 - 5.2.1.1 By application — 190
 - 5.2.1.2 By number of axes — 191
 - 5.2.1.3 By driving power — 194
 - 5.2.1.4 By control type — 194
 - 5.2.2 Application of tracking system — 195
 - References — 199
 - Exercises — 199

Chapter 6

PV module manufacturing — 201

- 6.1 Silicon material manufacturing — 201
 - 6.1.1 MG-Si manufacturing — 202
 - 6.1.2 High-purity poly c-Si manufacturing — 202
 - 6.1.2.1 Modified Siemens method — 203
 - 6.1.2.1.1 Synthesis of trichlorosilane — 204
 - 6.1.2.1.2 Purification of trichlorosilane by distillation — 204
 - 6.1.2.1.3 Reduction of trichlorosilane — 205
 - 6.1.2.1.4 Silicon tetrachloride hydrogenation — 206
 - 6.1.2.2 Fluidized bed reactor method — 207
 - 6.1.2.3 Silane thermal decomposition — 208
 - 6.1.2.4 Silicon tetrachloride hydrogenation — 206
- 6.2 c-Si growth technology — 208
 - 6.2.1 Mono c-Si growth technology — 210
 - 6.2.1.1 Czochralski method — 210
 - 6.2.1.1.1 Melting — 211

6.2.1.1.2	Seeding — 211
6.2.1.1.3	Leading — 212
6.2.1.1.4	Shouldering — 212
6.2.1.1.5	Equaling diameter — 212
6.2.1.1.6	Ending — 212
6.2.1.1.7	Cooling — 212
6.2.1.2	Zone melting method — 212
6.2.1.3	Magnetic field applied Czochralski method — 213
6.2.2	Casting polycrystalline method — 214
6.2.2.1	Bridgeman method — 215
6.2.2.2	Hem-heat exchange method — 215
6.2.2.3	Electromagnetic casting method — 216
6.2.2.4	Casting technology — 217
6.2.3	Casting mono c-Si method — 218
6.2.3.1	Seedless crystal ingot — 218
6.2.3.2	Seed crystal ingot — 219
6.3	c-Si processing technology — 219
6.3.1	c-Si square cut — 220
6.3.2	c-Si wafer — 220
6.4	Crystal silicon PV cell manufacturing technology — 221
6.4.1	Surface texturing — 222
6.4.2	Diffusion junction process — 226
6.4.3	Edge isolation — 228
6.4.4	Remove phosphosilicate glass — 229
6.4.5	Deposition antireflection film — 229
6.4.6	Screen printing electrode — 231
6.4.7	High temperature sintering — 232
6.4.8	PV cell I-V characteristics test — 233
6.5	PV module packaging — 235
6.5.1	PV module packaging materials — 237
6.5.1.1	PV glass — 237
6.5.1.2	Encapsulation material — 238
6.5.1.3	Backsheet material — 239
6.5.1.4	Frame — 239
6.5.1.5	Junction Box — 239
6.5.1.6	Solder ribbon — 239
6.5.1.7	Other materials — 240
6.5.2	PV module package process — 240
6.5.2.1	Cell sorting — 240
6.5.2.2	String soldering — 241
6.5.2.3	Stacks — 241
6.5.2.4	Lamination — 241

- 6.5.2.5 Trimming — **242**
- 6.5.2.6 Install frame — **242**
- 6.5.2.7 Install junction box — **243**
- 6.5.2.8 Testing — **243**
 - References — **243**
 - Exercise — **244**

Chapter 7

Components of a PV system — 245

- 7.1 PV array — **245**
- 7.2 Diode — **246**
 - 7.2.1 Blocking (anti-backflow) diodes — **246**
 - 7.2.2 Bypass diode — **246**
- 7.3 Energy storage equipment — **247**
 - 7.3.1 Mainstream energy storage technology — **247**
 - 7.3.1.1 Mechanical energy storage — **248**
 - 7.3.1.1.1 Pumped energy storage — **248**
 - 7.3.1.1.2 Flywheel energy storage — **248**
 - 7.3.1.1.3 Compressed air energy storage — **250**
 - 7.3.1.2 Electrochemical energy storage — **250**
 - 7.3.1.2.1 Lead-acid battery — **250**
 - 7.3.1.2.2 Sodium-sulfur battery — **251**
 - 7.3.1.2.3 Flow battery — **252**
 - 7.3.1.2.4 Sodium/nickel chloride battery — **252**
 - 7.3.1.2.5 Lithium-ion battery — **252**
 - 7.3.1.3 Electromagnetic energy storage — **253**
 - 7.3.1.3.1 Superconducting magnetic energy storage — **253**
 - 7.3.1.3.2 Supercapacitor energy storage — **254**
 - 7.3.1.3.3 High-energy capacitor energy storage — **254**
 - 7.3.2 Batteries for PV systems — **256**
 - 7.3.2.1 Lead-acid battery — **256**
 - 7.3.2.1.1 Basic structure — **257**
 - 7.3.2.1.2 Model code — **258**
 - 7.3.2.2 Maintenance-free lead-acid battery — **259**
 - 7.3.2.3 Valve-regulated sealed lead-acid battery — **259**
 - 7.3.2.4 Lead-acid battery performance parameters — **260**
 - 7.3.2.4.1 Battery voltage — **260**
 - 7.3.2.4.2 Battery capacity — **261**
 - 7.3.2.4.2.1 Relationship between battery capacity and discharge rate — **261**
 - 7.3.2.4.2.2 The relationship between battery capacity and temperature — **262**

7.3.2.4.3	Battery efficiency — 262
7.3.2.4.4	Battery self-discharge — 263
7.3.2.4.5	Battery discharge depth and charge state — 264
7.3.2.4.6	Battery life — 265
7.4	Controller — 266
7.4.1	Types of controllers — 266
7.4.1.1	Controller classification — 266
7.4.1.1.1	Pulse-width modulation (PWM) controller in parallel connection — 266
7.4.1.1.2	PWM controller in series connection — 267
7.4.1.1.3	Maximum power point tracking controller — 267
7.4.1.2	Comparison of three controllers — 268
7.4.1.2.1	PWM controller — 268
7.4.1.2.2	Maximum power tracking controller — 268
7.4.2	The main functions of the controller — 268
7.4.2.1	Battery charge and discharge management — 268
7.4.2.2	Equipment protection functions — 269
7.4.2.2.1	Load short-circuit/overload protection — 269
7.4.2.2.2	Internal short-circuit protection — 269
7.4.2.2.3	Reverse discharge protection — 269
7.4.2.2.4	Reverse polarity protection — 269
7.4.2.2.5	Lightning protection — 269
7.4.2.3	PV system status display — 269
7.4.2.4	PV system data and information storage — 270
7.4.2.5	PV system fault handling and alarm — 270
7.4.2.6	PV system remote monitoring and control — 270
7.4.3	Main technical specifications of controllers — 270
7.4.3.1	Quiescent current — 270
7.4.3.2	Loop voltage drop — 270
7.4.3.3	Vibration resistance — 271
7.4.3.4	High voltage resistance — 271
7.4.3.5	High current resistance — 271
7.5	Grid-connect PV inverters — 271
7.5.1	Type of grid-connect PV inverters — 271
7.5.2	Main requirements for grid-connect PV inverters — 273
7.5.3	How grid-connect PV inverter works? — 274
7.5.4	Main functions of grid-connect PV inverters — 276
7.5.4.1	MPPT control — 276
7.5.4.2	Grid connection — 277
7.5.5	System protection function — 279
7.5.5.1	PID protection — 280
7.5.5.2	Anti-islanding function — 281

7.5.6	Other aspects —	281
	References —	282
	Exercises —	283

Chapter 8

Photovoltaic power generation system design — 285

8.1	Main target of PV system design —	285
8.1.1	Definition and classification of PV systems —	285
8.1.2	Target and requirement of PV system design —	286
8.2	Design of grid-connected PV system —	286
8.2.1	The capacity design of grid-connected PV system —	286
8.2.1.1	Factors that determine the electric energy production —	286
8.2.1.1.1	Installed capacity —	286
8.2.1.1.2	Performance Ratio (PR) —	287
8.2.1.1.3	Solar irradiation —	289
8.2.1.2	Estimate energy production for grid-connected PV system —	290
8.2.1.2.1	Confirm the site parameters —	290
8.2.1.2.2	Obtained the optimal tilt angel —	290
8.2.1.2.3	Set the PR —	292
8.2.1.2.4	Calculation equation —	293
8.2.1.2.5	Obtain the energy production of grid-connected PV system —	293
8.2.1.3	Introduction of common design software —	295
8.2.2	Grid-connected PV power station and grid-connection —	299
8.2.2.1	Requirement of grid connection for PV power station —	299
8.2.2.1.1	Harmonic and waveform distortion —	299
8.2.2.1.2	Voltage deviation —	299
8.2.2.1.3	Voltage fluctuation and flicker —	300
8.2.2.1.4	Degree of voltage unbalance —	301
8.2.2.1.5	DC component —	301
8.2.2.1.6	Power factor —	301
8.2.2.2	Grid-connected type of PV system —	302
8.2.2.2.1	Single-branch grid-connected type —	302
8.2.2.2.2	Multibranch grid-connected type —	302
8.2.2.2.3	Parallel-connected grid-connected type —	303
8.2.2.3	Grid connection method of PV system —	303
8.2.2.3.1	Small-scale grid-connected PV system —	303
8.2.2.3.1.1	“Net metering” method —	304
8.2.2.3.1.2	Feed-in tariff method —	305
8.2.2.3.2	Large- and medium-sized PV power stations —	305
8.2.3	Basic flowchart of grid-connected PV system design —	308
8.2.3.1	Collecting primary data —	308
8.2.3.2	Site selection and investigation —	308

8.2.3.3	General layout arrangement — 308
8.2.3.4	Determine equipment configuration and model — 309
8.2.3.5	Select the appropriate grid inverter — 309
8.2.3.6	Determine the grid-connection method of PV system — 311
8.2.3.7	Determine the number of PV modules connected in series and parallel — 311
8.2.3.8	Calculate the optimal PV array tilt angle — 311
8.2.3.9	Conduct overall design of the project site to determine the layout of PV arrays — 312
8.2.3.10	Analyze the influence of distributed access capacity on distribution network — 312
8.2.3.11	Assess costs and benefits — 312
8.3	The design of off-grid PV system — 312
8.3.1	Requirements of off-grid PV system design — 313
8.3.2	Technical conditions — 313
8.3.2.1	Load properties — 313
8.3.2.2	The concept of several kinds of sunshine — 314
8.3.2.2.1	Possible sunshine duration — 314
8.3.2.2.2	Sunshine duration — 314
8.3.2.2.3	Percentage of sunshine — 315
8.3.2.2.4	Twilight duration — 315
8.3.2.2.5	Peak sun hour — 315
8.3.2.3	Temperature effect — 316
8.3.2.4	Battery autonomy days — 317
8.3.3	Selection of PV array tilt angle — 317
8.3.3.1	PV array should be placed as tilt if possible — 317
8.3.3.2	Determine the optimal tilt angle — 318
8.3.4	Design of balanced load PV systems — 319
8.3.4.1	Determine the load electricity consumption — 319
8.3.4.2	Calculate solar radiation on the PV array — 319
8.3.4.3	Calculate monthly surplus or deficit of power generation — 320
8.3.4.4	Determine the cumulative deficit amount $\sum -\Delta Q_i $ — 321
8.3.4.5	Determine output current of the PV array — 321
8.3.4.6	Calculate the optimal tilt angle — 322
8.3.4.7	Obtain capacity of battery and PV array — 322
8.3.4.8	Decide the best configuration — 322
8.3.4.9	Case Analysis — 324
8.3.4.10	Off-grid PV system capacity discussion — 327
8.3.5	Design PV systems with seasonal load — 328
8.3.6	PV system design for load with special requirements — 329
8.4	PV power system hardware design — 330
8.4.1	Site layout — 330

8.4.1.1	Length of obstructor shadows —	331
8.4.1.2	Minimum distance between two rows —	333
8.4.1.3	Layout of PV arrays —	334
8.4.1.3.1	The minimum height between the ground and the lowest point of PV module is 0.3 m —	334
8.4.1.3.2	Calculate the distance between two rows —	334
8.4.1.3.3	Calculate the number of PV rows —	335
8.4.1.3.4	Calculate the number of PV modules in each row —	335
8.4.1.3.5	Calculate the total power of installed modules —	335
8.4.1.4	Design of array racks —	336
8.4.2	Distribution room and electrical design —	336
8.4.3	Selection of auxiliary equipment —	337
8.4.3.1	Storage battery —	337
8.4.3.2	Controller —	337
8.4.3.3	Inverter —	337
8.4.3.4	Lightning protection device —	338
8.4.3.5	Fire Safety —	338
8.5	Other designs —	338
	References —	339
	Exercises —	340

Chapter 9

PV projects construction, acceptance, and maintenance — 343

9.1	Installation of PV power generation system —	343
9.1.1	Preparation before installation —	344
9.1.2	Installation of PV arrays —	344
9.1.2.1	Preparation before PV array installation —	344
9.1.2.2	Site installation —	346
9.1.2.3	Safety precautions [6] —	349
9.1.3	Installation of electrical equipment —	349
9.1.3.1	Technical requirement —	349
9.1.3.2	Installation location —	351
9.1.3.3	Wiring connection —	351
9.1.3.4	Wiring sequence —	352
9.1.4	Installation of storage battery packs —	353
9.1.4.1	Installation precautions —	353
9.1.4.2	Set-up for battery room —	353
9.1.4.3	Connection wire —	354
9.1.4.4	Preparation of electrolyte —	354
9.2	Commissioning of PV systems —	354
9.2.1	Preparation before commissioning —	354
9.2.2	Commissioning of PV array —	355

9.2.2.1	General review —	355
9.2.2.2	Inspection and measurement for PV arrays —	355
9.2.2.3	PV string test —	356
9.2.3	Commissioning of controller —	357
9.2.3.1	Documentation check —	357
9.2.3.2	Performance testing —	357
9.2.3.3	Connecting wires —	358
9.2.4	Commissioning of off-grid system inverter —	358
9.2.5	Commissioning of grid-connected inverter —	359
9.2.5.1	Performance testing —	359
9.2.5.2	Connecting wires —	365
9.3	Acceptance of PV project —	365
9.3.1	Acceptance of subengineering projects —	366
9.3.1.1	Civil engineering —	366
9.3.1.2	Installation engineering —	366
9.3.1.3	Other subengineering projects —	367
9.3.2	Acceptance of project start-up —	367
9.3.3	Acceptance of project commissioning and transfer —	368
9.3.4	Acceptance of project completion —	368
9.4	Maintenance and management for PV systems —	368
9.4.1	Routine maintenance —	369
9.4.1.1	Array inspection —	369
9.4.1.2	Equipment inspection —	369
9.4.1.3	Battery maintenance —	369
9.4.2	Periodical inspection —	369
	References —	371
	Exercises —	371

Chapter 10

Applications of photovoltaic systems — 373

10.1	Classification of ground PV systems —	373
10.1.1	Pico PV system —	373
10.1.2	Off-grid residential system —	376
10.1.3	Off-grid nonresidential system —	378
10.1.3.1	PV pump —	378
10.1.3.1.1	PV pump main components —	379
10.1.3.1.2	PV water pump design —	379
10.1.3.2	Solar fan hat —	381
10.1.3.3	Communication PV power —	382
10.1.3.4	Off-grid power source —	385
10.1.3.4.1	Solar beacon light —	385
10.1.3.4.2	Cathodic protection power supply for oil and gas pipelines —	386

10.1.3.5	Emergency management and disaster relief power supply —	387
10.1.3.6	Transportation power —	387
10.1.3.6.1	Solar aircraft —	387
10.1.3.6.2	Solar yacht —	393
10.1.3.6.3	Solar-powered car —	393
10.1.3.7	Lighting power —	397
10.1.4	Grid-connected distributed system —	398
10.1.4.1	Integration of PV and buildings —	399
10.1.4.1.1	Building-attached PV (BAPV) —	401
10.1.4.1.2	Building-integrated PV —	401
10.1.4.2	PV noise barrier system —	405
10.1.4.3	Floating PV system —	410
10.1.4.4	Agricultural PV —	413
10.1.4.5	Solar road —	415
10.1.5	Centralized grid-connected system —	419
10.1.6	Hybrid PV system —	422
10.1.6.1	PV-diesel hybrid power system —	422
10.1.6.2	PV-wind hybrid power system —	423
10.2	Space PV power station —	424
	References —	426
	Exercises —	427

Chapter 11

Benefit analysis of PV power generation — 429

11.1	Economic benefits of PV power generation —	429
11.1.1	The cost of PV power generation —	429
11.1.1.1	Calculation of LCOE —	429
11.1.1.1.1	Methods of calculating LCOE —	429
11.1.1.1.2	Calculating PV LCOE —	431
11.1.1.2	Specific influencing factors —	433
11.1.1.2.1	Input section —	433
11.1.1.2.2	Output section —	434
11.1.2	History and prospects of PV power generation cost —	438
11.2	PV energy payback time —	441
11.2.1	Energy payback time —	441
11.2.2	Overview of worldwide situations —	443
11.2.2.1	Alsema E A —	443
11.2.2.2	IEA-PVPS joint report —	447
11.2.2.3	IEA-PVPS Task 12 —	448
11.2.3	Calculation methods for relevant parameters —	451
11.2.3.1	Annual output energy from a PV system —	451

11.2.3.2	The total energy input E_{in} during the lifetime of the PV system —	452
11.2.3.3	Calculate EPBT —	452
11.3	PV power generation to reduce CO ₂ emission —	455
11.3.1	Greenhouse gas emitted by electricity generation —	455
11.3.2	CO ₂ emission factors —	456
11.3.2.1	Fuel CO ₂ emission factor —	456
11.3.2.2	CO ₂ emission factor for electricity generation —	456
11.3.3	PV potential mitigation —	458
11.4	Other benefits of PV power generation —	463
11.4.1	Increase job opportunities —	463
11.4.2	Save fuel sources —	465
11.4.3	Reduce power transmission loss —	465
11.4.4	Ensure reliable energy supply —	466
	References —	466
	Exercises —	467

Practice Answers — 469

Index — 471
