Acknowledgements — VII

Preface — IX

Foreword (by Ada Yonath) — XI

About the authors — XVII

Introduction — 1

References — 6

Chapter 1

Some basic concepts of crystallography — 9

- 1.1 Introductory remarks — 9
- 1.2 Elastic scattering and Bragg's law — 10
- 1.3 Structure factors — 11
- 1.4 The electron density — 17
- 1.5 Conclusion — 21
- References — 21

Chapter 2

Some basic concepts of quantum chemistry — 25

- 2.1 Introduction — 25
- 2.2 The Schrödinger equation — 26
- 2.3 Atomic units (au) — 28
- 2.4 The molecular Hamiltonian — 29
- 2.5 The variational principle — 31
- 2.6 The Pauli exclusion principle — 32
- 2.7 The Hartree–Fock method — 35
- 2.8 Some essentials of density functional theory (DFT) — 43
- 2.9 Level of theory in molecular calculations — 50
- References — 52

Chapter 3

Quantum crystallography: an introduction — 55

- 3.1 *N*-representability — 55
- 3.2 Derivation of the Clinton equations — 59
- 3.3 Conclusion — 62
- References — 62

Chapter 4

Example applications of the Clinton equations — 65

- 4.1 First application: the beryllium crystal — 65
- 4.2 Second application: maleic anhydride crystal — 71
- 4.3 Conclusion — 75
- References — 75

Chapter 5

The kernel energy method: a computational approach to large systems — 77

- 5.1 The computational scaling bottleneck of quantum calculations — 77
- 5.2 The KEM method as a solution to the computational scaling bottleneck — 78
- 5.3 The lead-up to the KEM formalism — 78
- 5.4 The kernel energy method — 83
- 5.5 The scaling of the KEM — 85
- 5.6 Closing remarks — 87
- References — 88

Chapter 6

The kernel energy method: accurate and fast calculations on large systems by example — 93

- 6.1 An approach to quantum calculations on large systems: the kernel energy method — 93
- 6.2 The kernel energy method applied to large biomolecules — 95
- 6.3 The kernel energy method and the calculation of response properties — 97
- 6.4 The kernel energy method and the calculation of properties of atoms in molecules — 100
- 6.5 Closing remarks — 106
- References — 107

Chapter 7

The quantum theory of atoms in molecules — 111

- 7.1 From topography to topology — 111
- 7.2 Critical points in the electron density — 123
- 7.3 The zero-flux surface bounding proper open quantum systems — 126
- 7.4 Coincidence of the topological atom and the quantum atom — 129
- 7.5 The atomic statement of the virial theorem — 136
- 7.6 The Laplacian of the electron density — 139
- 7.7 Examples of bond properties — 139

7.7.1	The electron density at the BCP (ρ_b) —	139
7.7.2	The Laplacian of the electron density at the BCP ($\nabla^2\rho_b$) —	140
7.7.3	The bond ellipticity (ϵ) —	140
7.7.4	Energy densities at the BCP —	140
7.8	Atomic contributions to molecular properties —	141
7.9	Examples of atomic properties —	142
7.9.1	Atomic population [$N(\Omega)$] and charge [$q(\Omega)$] —	142
7.9.2	Kinetic energy [$\tau(\Omega)$] —	142
7.9.3	The atomic integrated Laplacian [$L(\Omega)$] —	143
7.9.4	The (virial) atomic energy [$E(\Omega)$] —	143
7.10	Back to experiment —	143
7.11	Conclusion —	145
	References —	145

Chapter 8

The quantum theory of atoms in molecules and quantum crystallography: a symbiosis — 151

8.1	QTAIM charges for large molecules from KEM —	151
8.2	Interacting quantum atoms energy components from from KEM —	156
8.3	The Clinton iterative melding of assembled electron densities and of molecular aggregates —	159
8.4	The density (matrix) in momentum space —	162
8.5	The total energy —	162
8.6	Atomic virial energies —	163
8.7	Excited-state electron densities from X-ray diffraction experiments —	163
8.8	Conclusions —	164
	References —	164

Chapter 9

The calculation of the energy — 167

9.1	The case of N -representable $\rho_{2\text{-det}}$ extracted from KEM $\rho_{1\text{-det}}$ —	167
9.2	The energy from X-ray quantum crystallographic density? —	171
9.3	Discussion and conclusion —	172
	References —	173
