

1	Introduction — 1
1.1	The importance of measurement uncertainty — 1
1.2	The nature of measurement uncertainty — 3
2	Fundamental terms of metrology — 7
2.1	Quantities, quantity values and units — 7
2.2	Measurement — 14
2.3	The true value of a measured quantity — 16
2.4	Principles, methods, procedures — 21
2.5	Accuracy, trueness, precision, resolution — 23
2.6	Measurement errors — 28
2.7	Measurement uncertainty — 32
3	Measurement models — 39
3.1	Modelling methods — 39
3.2	Model equations — 44
3.3	Submodels — 50
3.4	Modelling strategies — 52
3.5	Linear approximation — 55
3.6	Quadratic approximation — 69
3.7	Graphical modelling — 74
4	Basics of probability theory — 89
4.1	Probability concepts — 89
4.2	Events and outcomes — 106
4.3	Mathematical probability — 115
4.4	Conditional probability — 118
4.5	Rules of probability calculations — 123
4.6	The theorem of BAYES and LAPLACE — 129
4.7	Stochastic independence — 132
4.8	Random quantities — 136
4.9	Probability distribution functions — 140
4.10	Probability density functions — 150
4.11	Transformations of random quantities — 156
4.12	Expectations — 159
4.13	Variances and standard deviations — 166
4.14	Multivariate random quantities — 172

4.15	Multivariate distribution functions	— 175
4.16	Multivariate density functions	— 179
4.17	Marginal distributions	— 185
4.18	Multivariate expectations	— 193
4.19	Covariances and correlations	— 199
4.20	Approximate estimations	— 206
4.21	Central limit theorem	— 209

5 Statistical methods — 211

5.1	Populations and random sampling	— 211
5.2	Statistics	— 213
5.3	Estimators	— 215
5.4	Method of moments	— 221
5.5	Maximum likelihood method	— 224
5.6	Least squares method	— 234
5.7	BAYESian methods	— 240
5.8	Interval and region estimation	— 255

6 Measurement uncertainty concepts — 273

6.1	The traditional method	— 273
6.2	The methods of the GUM	— 280

A From univariate to multivariate uncertainty — 287

A.1	Introduction	— 287
A.2	Univariate uncertainty calculations	— 287
A.3	Multivariate uncertainty calculation	— 292
A.4	Matrix representation	— 295
A.5	Generalization	— 297
A.6	Coverage regions	— 298
A.7	Summary of multivariate calculations	— 300
A.8	Examples	— 302

B Dealing with systematic measurement errors — 309

B.1	Introduction	— 309
B.2	Preliminary remarks	— 310
B.3	Ignoring an existing systematic error	— 311
B.4	BAYES' theorem and marginalization	— 312
B.5	The principle of maximum entropy	— 313
B.6	A procedure to handle systematic errors	— 316
B.7	The influence of temperature on length	— 318
B.8	The cosine error in length measurement	— 321
B.9	The influence of form deviations on the distance	— 323

B.10 Noise as a systematic error — 328

C Bayesian linking of key comparisons — 333

C.1 Introduction — 333

C.2 The scenario — 335

C.3 The information available — 336

C.4 Establishing key comparison reference values — 337

C.5 Degrees of equivalence — 341

C.6 Conformity tests — 341

C.7 Examples — 342

C.8 Uncorrelated measurement results — 345

C.9 Conclusion — 347

List of Definitions — 351

List of Propositions — 355

List of Examples — 357

List of Figures — 361

List of Tables — 363

List of Symbols — 365

Bibliography — 371

Index — 373
