## Preface — V

<b>1</b>	<b>Nielsen methods — 1</b>
1.1	Free groups and group presentations — 1
1.1.1	Residual finiteness and the Hopfian property — 8
1.1.2	Counting processes — 10
1.1.3	Residual freeness, properties CT and CSA — 14
1.1.4	Universally free groups — 18
1.2	The Nielsen method in free groups — 30
1.2.1	Nielsen transformations and subgroups of free groups — 30
1.2.2	Special equations in free groups — 34
1.2.3	Test elements, almost primitive elements, and generic elements — 40
1.2.4	Vaught problem and powers in free groups — 45
1.2.5	The automorphism group of free groups and stabilizers — 47
1.3	Generators and relators — 52
1.3.1	Examples of group presentations — 52
1.3.2	Decision problems and Tietze transformations — 60
1.3.3	The Reidemeister–Schreier method — 65
1.3.4	Hall’s theorem — 74
1.3.5	The Todd–Coxeter method — 76
1.4	Free products — 84
1.4.1	Examples of free products and the extension problem — 85
1.4.2	Normal form, the Nielsen method in free products, and the theorem of Kurosh — 92
1.4.3	Special equations in free products — 101
1.4.4	The theorem of Grushko and applications for equations in free products — 108
1.5	Free products with amalgamation — 113
1.5.1	The pushout and first properties of free products with amalgamation — 113
1.5.2	The Nielsen method in free products with amalgamation — 119
1.5.3	Arithmetic Fuchsian groups — 129
1.5.4	E-transformations — 138
1.5.5	Equations in free products with amalgamation — 140
1.5.6	Lyndon property LZ, restricted Gromov groups and Baumslag doubles — 142
1.6	HNN extensions — 146
1.6.1	Definition and first properties of HNN extensions — 147
1.6.2	Embeddings of groups using HNN extensions — 152
1.6.3	The Nielsen method and equations in HNN extensions — 159
1.7	One-relator groups — 167

- 1.7.1 Magnus's Freiheitssatz and finite subgroups of one-relator groups — **167**
- 1.7.2 Newman's spelling theorem — **172**
- 1.7.3 Normal closures of single elements in free groups — **174**
- 1.7.4 The surface group conjecture and property IF — **176**
- 1.7.5 Torsion-free normal subgroups of finite index, the Tits alternative and decompositions of one-relator groups — **178**
- 1.7.6 RG type, CT, and CSA properties in one-relator groups — **192**

## **2 Covering spaces — 196**

- 2.1 Fundamental groups and CW complexes — **196**
- 2.1.1 Paths, homotopy equivalences and fundamental groups — **196**
- 2.1.2 Simplicial and CW complexes — **202**
- 2.1.3 Homotopy extension property and cellular approximation — **211**
- 2.2 Covering spaces and the theorem of Seifert and van Kampen — **213**
- 2.2.1 Covering maps and lifting properties — **213**
- 2.2.2 The theorem of Seifert and van Kampen — **219**
- 2.3 Universal coverings, edge path groups and applications — **226**
- 2.3.1 Surface groups — **237**
- 2.3.2 Covering space proofs of Theorems 1.2.52 and 1.3.23 — **239**
- 2.3.3 Group amalgam description of the fundamental groups of certain CW complexes — **240**
- 2.3.4 Topological proof of the Reidemeister–Schreier theorem — **242**
- 2.3.5 Covering space interpretation of residual finiteness — **242**
- 2.3.6 Subgroup separability — **243**
- 2.3.7 Graphs of groups — **248**

## **3 Hyperbolic groups — 250**

- 3.1 Introduction: the theory of hyperbolic groups — **250**
- 3.2 Hyperbolic and metric spaces — **254**
- 3.2.1 The Gromov product in hyperbolic metric spaces and  $\mathbb{R}$ -trees — **254**
- 3.2.2 Approximation by trees — **261**
- 3.2.3 Equivalent hyperbolicity properties for geodesic metric spaces — **272**
- 3.2.4 The upper half plane as a hyperbolic metric space — **279**
- 3.3 Hyperbolic geodesic metric spaces and hyperbolic groups — **281**
- 3.3.1 Properly discontinuous actions of groups and quasi isometries — **282**
- 3.3.2 Hyperbolic groups and proper actions on some hyperbolic space — **288**
- 3.4 First properties of hyperbolic groups — **291**
- 3.4.1 The Rips complex for a hyperbolic group — **292**
- 3.4.2 The Dehn algorithm and applications — **299**
- 3.4.3 Linear isoperimetric inequalities — **302**
- 3.5 Examples of hyperbolic groups — **305**
- 3.5.1 Surface groups — **306**

3.5.2	Groups with sufficiently high-powered relators —	307
3.5.3	Baumslag–Solitar groups —	308
3.5.4	Groups of F-type —	309
3.6	Interlude: Marshall Hall's theorem and property S —	333
3.7	Quasi isometries and quasi geodesics —	342
3.7.1	Quasi geodesics, quasi rays and quasi segments —	342
3.7.2	Independence of the choice of finite generating systems —	356
3.8	The boundary of a tree —	361
3.8.1	Equivalent rays in a metric tree and its boundary —	361
3.8.2	Lipschitz and Hölder homeomorphisms —	365
3.8.3	Applications to groups —	373
3.9	The boundary of a hyperbolic space —	377
3.10	Automatic and parafree groups —	390
3.11	Stallings foldings and subgroups of free groups —	394

## **Bibliography — 401**

## **Index — 411**
