Abstract	i
Zusammenfassung	iii
1 Introduction and Motivation	1
1.1 Tomography	2
1.2 Terahertz Radiation	4
1.3 State of the Art	8
1.4 Scope and Structure of this Work	9
2 Theoretical Framework	11
2.1 Propagation of Electromagnetic Waves	11
2.1.1 The Wave Equation and its Solution	12
2.1.2 Interaction with the Medium	13
2.1.3 Reflection and Refraction	13
2.1.4 Fresnel Equations	15
2.2 Frequency-Modulated Continuous-Wave Radar	17
2.3 Established Tomographic Reconstruction Techniques	23
2.3.1 Fourier Slice Theorem	23
2.3.2 Filtered Back-Projection	25
2.3.3 Iterative Reconstruction Techniques	27
2.4 Inverse Problems	32
2.4.1 Structural Similarity (SSIM)	33
3 A priori considerations	35
3.1 Sample Outline Definition	36
3.2 Beam Shape	39
3.3 Off-axis Measurements	45
4 Reconstruction Algorithm	51
4.1 Conjugate Gradient Least Squares Algorithm	51
4.1.1 Convergence and Complexity Analysis	54
4.1.2 Restriction of the Solution Space	55
4.1.3 Discrete CGLS	56
4.2 Regularization	60
4.2.1 L-Curve Stopping Criterion	61
5 Experiment Setup and Software	67
5.1 Single-Pixel Setup	68
5.2 Detector Array Setup	70
5.3 The f- θ Lens	71
5.4 Measurement and Control Software	74

6 Results 75

6.1 Comparison of Reconstruction Algorithms 75

6.2 Samples and *a priori* Knowledge 78

6.3 Reconstructions Including *a priori* Information and Off-axis Measurements . . 81

6.4 Reconstructions with Restricted and Discrete CGLS 94

6.5 3D Reconstructions 98

6.6 Array Measurements 100

6.7 Perspective and Preliminary Results 104

7 Conclusions 109

A Appendix to Chapter 5 113

A.1 Images of the Measurement Systems 113

A.2 Measurement Software 115

 A.2.1 User Interface 115

 A.2.2 Backend 117

 A.2.3 Data Format 122
