Preface to the First Mettler Toledo Edition, 2006 1

Preface to This Hanser Edition, 2025 2

Applications List of Part 1 9

Applications List of Part 2 11

Part 1 17

1 Introduction to Thermal Analysis..... 19

1.1 Differential thermal analysis (DTA, SDTA) 19

1.2 Differential scanning calorimetry (DSC) 19

1.2.1 Conventional DSC 19

1.2.2 Chip calorimetry 20

1.2.3 Temperature-modulated DSC 21

1.2.3.1 ADSC 21

1.2.3.2 IsoStep 22

1.2.3.3 TOPEM 22

1.2.4 DSC photocalorimetry 23

1.2.5 DSC microscopy 23

1.3 Thermogravimetric analysis (TGA) 24

1.4 Thermomechanical analysis (TMA) 25

1.5 Dynamic mechanical analysis (DMA) 26

1.6 Evolved gas analysis (EGA) 28

1.6.1 TGA-MS and TMA-MS 28

1.6.2 TGA-FTIR 29

1.6.3 TGA-GC/MS 30

1.6.4 TGA-Micro-GC/MS 31

1.7 Sorption 32

2 Structure, Properties and Applications of Thermosets..... 35

2.1 Introduction..... 35

2.2 Chemical structure of thermosets 35

2.2.1 Macromolecules 35

2.2.2 Thermosets, a general overview 36

2.2.3 Resins..... 37

2.2.3.1 Epoxy resins, EP 38

2.2.3.2 Phenolic resins, PF 40

2.2.3.3 Amino resins, UF, MF 42

2.2.3.4 Alkyds, unsaturated polyester resins, UP 43

2.2.3.5 Vinyl ester resins, VE 44

2.2.3.6 Allylics, DAP molding compounds 44

2.2.3.7 Polyacrylate, PAK..... 44

2.2.3.8 Polyurethane systems, PUR 45

2.2.3.9 Dicyanate resins 46

2.2.3.10 Polyimides (PI), Bismaleimide resins (BMI) 46

2.2.3.11 Silicone resins, SI 47

2.3 The curing reaction..... 47

2.3.1 Crosslinking steps 47

2.3.2	TTT diagram	48
2.3.3	Curing kinetics	49
2.4	Applications of thermosets	51
2.4.1	Properties	51
2.4.2	Processing	52
2.4.3	Areas of application and properties of individual resins	52
2.4.3.1	Epoxy resins, EP	52
2.4.3.2	Phenol-formaldehyde resins, PF	53
2.4.3.3	Amino resins, UF/MF	54
2.4.3.4	Polyester resins, UP	54
2.4.3.5	Vinyl ester resins, VE	55
2.4.3.6	DAP molding compounds	55
2.4.3.7	Acrylates	55
2.4.3.8	Polyurethanes, PUR	55
2.4.3.9	Dicyanate resins	56
2.4.3.10	Polyimides, PI and BMI	56
2.4.3.11	Silicone resins	56
2.4.4	Overview of the areas of use and application	56
2.5	Characterization methods for thermosets	58
2.5.1	Overview of information required	58
2.5.2	TA techniques for the characterization of thermosets	59
2.5.3	The glass transition	60
2.5.3.1	Glass transition and relaxation: thermal and dynamic glass transition	60
2.5.3.2	Determination of the glass transition temperature	61
2.5.4	Standard methods for thermoset analysis	63
3	Basic Thermal Effects of Thermosets	69
3.1	Measurement effects with DSC	69
3.1.1	Determination of the glass transition	69
3.1.1.1	Measurement of the glass transition temperature by DSC	70
3.1.1.2	Evaluation possibilities for the glass transition by DSC	71
3.1.1.3	Influence of sample pretreatment on the glass transition	76
3.1.1.4	Measurement of the glass transition by ADSC	79
3.1.2	Determination of the specific heat capacity	81
3.1.3	The curing reaction measured by DSC	83
3.1.3.1	Dynamic curing: first and second heating measurements	83
3.1.3.2	Isothermal curing by DSC	86
3.1.3.3	Postcuring and degree of cure by DSC	88
3.1.3.4	Glass transition as a function of the conversion	90
3.1.3.5	Rate of cure and kinetics, isothermal measurements	92
3.1.3.6	Curing rate, dynamic measurements	95
3.1.3.7	Kinetic evaluations and predictions	96
3.1.4	Separation of the glass transition and postcuring (TOPEM)	99
3.1.5	UV curing measured by DSC	100
3.2	Measurement effects with TGA	103
3.2.1	Mass changes on heating a thermoset	103
3.2.2	Content determination: moisture, filler and resin content	104
3.2.3	TGA analysis of a phenol-formaldehyde condensation reaction	106
3.3	Measurement effects with TMA	107
3.3.1	Determination of the linear expansion coefficient	107
3.3.2	Measurement of the glass transition by TMA	110
3.3.2.1	Determination of the glass transition by means of the expansion curve	110
3.3.2.2	Determination of the softening temperature of thin coatings	111
3.3.2.3	Determination of the glass transition from bending measurements	112

3.3.3	Measurement of the curing reaction by TMA	114
3.3.3.1	Investigation of the curing reaction using bending measurements.....	115
3.3.3.2	Determination of the gelation time by DLTMA.....	117
3.4	Measurement effects with DMA	118
3.4.1	Determination of the glass transition by DMA.....	118
3.4.2	The frequency dependence of the glass transition	121
3.4.3	The dynamic glass transition.....	123
3.4.4	Isothermal frequency sweeps.....	125
3.4.5	Master curve construction and mechanical relaxation spectrum.....	126
3.4.6	Curing measured by DMA	128
3.5	A comparison of the glass transition measured by DSC, TMA and DMA	129
Part 2		133
4 Epoxy resins		135
4.1	Factors affecting curing reactions.....	135
4.1.1	Influence of curing conditions (temperature, time)	135
4.1.2	Influence of the mixing ratio of the components	136
4.1.3	Influence of the type of accelerator	139
4.1.4	Influence of accelerator content on the curing reaction.....	140
4.1.5	EP: Prediction of conversion behavior and verification	142
4.1.6	Curing of an EP resin measured by DMA.....	145
4.1.7	Curing of a prepreg measured by DMA	147
4.1.8	Curing of a powder coating.....	148
4.2	Influences affecting the glass transition	150
4.2.1	Effect of repeated post curing on the glass transition	150
4.2.2	The effect of stoichiometry on curing and the resulting glass transition temperature.....	152
4.2.3	Influence of reactive diluents on the resulting glass transition temperature	154
4.2.4	Vitrification.....	157
4.2.4.1	Determination of the dependence of the glass transition temperature on curing conversion.....	157
4.2.4.2	Chemically induced glass transition in an isothermal curing reaction measured by temperature-modulated DSC	160
4.2.4.3	Model free kinetics and vitrification during curing	161
4.2.4.4	Measurement of vitrification during curing.....	163
4.2.5	Determination of a Time-Temperature-Transformation (TTT) diagram	165
4.2.5.1	TTT diagram: Determination from post curing experiments.....	165
4.2.5.2	TTT diagram: Application of temperature-modulated DSC.....	166
4.2.5.3	Vitrification and model free kinetics.....	168
4.2.6	Gel point and mechanical glass transition during isothermal curing	172
4.2.6.1	Change of the shear modulus during the curing reaction	172
4.2.6.2	Frequency dependence of the shear modulus during a curing reaction	174
4.3	Storage effects	176
4.3.1	Post curing after storage	176
4.3.2	EP-CF: Influence of storage on prepregs.....	177
4.4	Fillers and reinforcement fibers	178
4.4.1	Glass transition temperature and "Cure Factor" by DSC according to ICP-TM-650.....	178
4.4.2	Glass transition temperature and z-axis thermal expansion by TMA according to ICP-TM-650	180
4.4.3	Printed circuit boards, influence of fiber orientation on expansion behavior	181
4.4.4	Determination of the glass transition of CF-reinforced resins.....	182
4.4.5	Determination of the fiber content of composites by thermogravimetric analysis	185
4.4.6	Carbon fiber content in prepregs	186
4.5	Checking material properties.....	188
4.5.1	Quality assurance in the production of printed circuit boards.....	188

4.5.2	Determination of the glass transition of carbon fiber reinforced thermosets.....	190
4.5.3	Decomposition kinetics and long-term stability according to ASTM standards E1641 and E1877	192
4.5.4	Aging of printed circuit boards	194
4.5.5	Analysis of decomposition products by TGA-MS.....	195
4.5.6	Delamination of printed circuit boards by TMA-EGA	197
4.5.7	PCB: Delamination by TGA-Micro GC/MS	198
4.5.8	Time to delamination of printed circuit board by TMA according to ICP-TM-650.....	200
4.5.9	Quality assurance, failure analysis of adhesive bonds	202
4.5.10	Interaction of oil with a reinforced EP resin pipe	203
5	Unsaturated polyester resins	205
5.1	Incoming goods control: curing characteristics and glass transition	205
5.2	UP: Influence of the accelerator content.....	206
5.3	UP: Influence of the hardener content	207
5.4	Influence of the inhibitor on isothermal curing	208
5.5	UP: Curing behavior after storage	210
5.6	VE: Shift of curing temperature due to the accelerator	211
5.7	VE-GF: Degree of cure of a pipe after use	212
5.8	Curing of powder coatings using UV light.....	214
5.9	Molding times for processing SMC.....	218
6	Formaldehyde resins	221
6.1	PF: Influence of measurement conditions.....	221
6.2	PF: Differentiation between completely and partially cured phenolic resins by TMA.....	222
6.3	PF: Softening behavior of resins.....	223
6.4	Two different filled MF/PF molding compounds.....	226
6.5	PF: Paper prepregs for plywood	228
6.6	PF: Condensation reaction investigated by TGA/SDTA	229
6.7	PF: Curing kinetics of resol resins.....	233
6.8	UF molding compounds: Influence of processing (molding).....	234
6.9	UF: Curing kinetics of molding compounds	236
6.10	PF: Determination of thermal conductivity.....	238
7	Methacrylate/Acrylic Resins (MMA)	243
7.1	Light curing of a dental composite	243
8	PUR systems	245
8.1	PUR: Two-component system with solvent.....	245
8.2	PUR: Polyaddition at different temperatures	246
8.3	Softening temperature of PUR lacquer coatings.....	247
8.4	PUR: Moisture curing of an adhesive by TMA.....	248
8.5	PUR: Decomposition by TGA-GC/MS	250
8.6	PUR casting compounds: Glass transition as a quality criterion	253
9	Other Resin Systems	257
9.1	BMI-CF: Influence of storage temperature on tackiness of prepregs	257
9.2	Degradation of a polyimide coating by TGA-FTIR.....	258
9.3	Light curing of adhesives	260

Appendix..... 265
Terms Used in Connection with Thermosets 269
Literature 273
Subject Index 275
