About the book — VII

Preface — IX

Chapter 1

Understanding the electron is essential physics of electron microscopy — 1

- 1.1 Discovery of electrons and invention of the microscope — 1
 - 1.1.1 Is an electron is a particle or a wave? — 2
 - 1.1.2 Electron is both a particle and a wave — 4
- 1.2 Shape and structure of an electron — 4
 - 1.2.1 The electron model of a dynamic photon with toroidal topology — 5
- 1.3 Description of a photon's dynamic motion at the spatiotemporal scope of a corpuscle electron — 13
 - 1.3.1 Electromagnetic field energy density — 13
 - 1.3.2 How to describe the dynamic photon on surface of the torus? — 15
 - 1.3.3 Relationship between a moving corpuscle electron with velocity v_t and the internal dynamic process of a circulating vorticity photon in the corpuscle electron — 19
 - 1.3.4 Wave function, Maxwell equation, and Schrödinger equation — 22
 - 1.3.5 Relationship between the density of mass and charge and the wave function — 25
 - 1.3.6 Properties of a moving electron with velocity $u(t)$ in the laboratory frame — 30
- 1.4 de Broglie wave and internal oscillation of electromagnetic energy flux of the corpuscle electron — 33
 - 1.4.1 What is the nature of the de Broglie wave? — 34
 - 1.4.2 Wave function and dynamic parameters of a moving corpuscle electron — 35
 - 1.4.3 Wave function of a free corpuscle electron — 40
- References — 42

Chapter 2

Intrinsic nature of a corpuscle electron in an electron microscope — 44

- 2.1 Electron in the electron gun of an electron microscope — 44
- 2.2 Electron flying along the optic axis of a transmission electron microscope — 49
- 2.3 Electrons flying through a magnetic lens — 52
- 2.4 Characteristics of the confined electromagnetic wave energy flux of a corpuscle electron — 57
- References — 61

Chapter 3

Motion duality of electron in space and time — 62

- 3.1 The electron flying in electron microscope — **62**
- 3.2 Electron beam and a corpuscle electron — **64**
- 3.3 Energy and momentum and space-time — **66**
- 3.4 Relationship between phase of wave function and internal dynamic process of a corpuscle electron — **71**
 - 3.4.1 Electromagnetic fields of a corpuscle electron at space and time — **74**
 - 3.4.2 Electromagnetic field characters of a flying corpuscle electron — **75**
 - 3.4.3 The interaction between the corpuscle electron and sample medium — **79**
- 3.5 Traversing process of a corpuscle electron over a sample — **86**
 - 3.5.1 A corpuscle electron traversing over a nuclei of an atom — **86**
 - 3.5.2 Flying corpuscle electrons traverse through the sample in the spatial and temporal domains — **88**
- 3.6 What is transmission electron microscopy? — **118**
References — **120**

Chapter 4

Quantum electron microscopy — 123

- 4.1 Understanding what is a corpuscle electron pulse beam and what is an electron beam — **123**
- 4.2 What you see at the screen or CCD device? — **127**
 - 4.2.1 Electron beam's longitudinal coherence — **128**
 - 4.2.2 Transversal coherence — **128**
- 4.3 Symmetric spatial-temporal periodicity of the electromagnetic field of sample detected by the ensemble corpuscle electron pulse beams as Talbot's effect — **129**
- 4.4 Converging corpuscle electron pulsed beam and narrow (nano) corpuscle electron pulsed beam — **143**
 - 4.4.1 Phase of corpuscle electron in convergent beam — **144**
 - 4.4.2 Robust single-electron scanning probe with single-electron detector would open a new field of quantum electron microscopy — **144**
- References — **147**

Chapter 5

Summary — 149

Index — 153
