List of Figures	xiii
List of Tables	xvii
Acronyms and Notation	xix
1 Introduction and Motivation	1
1.1 Objectives and Concepts	2
1.2 Thesis Structure	8
2 Landing Procedure and Controller Architecture	11
2.1 Scaled Test Aircraft ULTRA-Extra	11
2.2 Automatic Landing Procedure	16
2.3 Controller Architecture	20
2.4 Flight Guidance and Spline Path-Following	22
2.4.1 Look-Ahead Guidance	23
2.4.2 Spline Calculation and Path-Following Algorithm	23
2.4.3 Non-Linear-Guidance-Law	29
2.4.4 Heading Reference Calculation	30
3 ULTRA-Extra Nonlinear Plant Model	33
3.1 Nonlinear Plant Model	33
3.1.1 Equations of Motion	34
3.1.2 Environmental Model	35
3.1.3 Aerodynamics Model	41
3.1.4 Black-Box Model for ULTRA-Extra Propulsion System	47
3.1.5 Additional Models	49
3.2 Parameter Estimation	51
3.2.1 Inertia Tensor and Center of Gravity	52
3.2.2 Aerodynamics	54
3.2.3 Propulsion	63

4	Controller Design for Automatic Landing	71
4.1	Control Objectives and Methods	71
4.2	Synthesis Model	77
4.3	Basic Flight Control Loops	82
4.4	Guidance Law Tuning	92
4.5	Multivariable Flare Controller	94
4.5.1	Flare Maneuver Design	94
4.5.2	Control Design and Synthesis	99
4.5.3	Anti-Windup Compensation and Bumpless Transfer . .	102
4.5.4	Additional Ground Effect Compensation	105
5	Validation of the Automatic Landing Controller	109
5.1	Scenario Simulations	109
5.1.1	Scenario 1: Crabbed approach on a straight-line path . .	110
5.1.2	Scenario 2: Sideslip approach on a curved path	114
5.2	Monte-Carlo Simulations	117
5.2.1	Simulation Campaign 1: Straight-line Approach	121
5.2.2	Simulation Campaign 2: Curved Approach	130
5.3	Flight Test Experiments	138
5.3.1	Straight Crabbed Approach Landing	139
5.3.2	Straight Sideslip Approach Landing	144
5.3.3	Helix Crabbed Approach Landing	148
5.3.4	Curved Sideslip Approach Landing	152
6	Conclusion and Future Research Opportunities	159
A	Appendix	165
	Bibliography	171
