1	Introduction	1
1.1	Interactive Binaural Reproduction	2
1.2	Aim and Motivation of Thesis	5
1.3	Thesis Structure	6
2	Fundamental Concepts	9
2.1	Binaural Hearing	9
2.1.1	Binaural Cues and Acoustic Influence of the Head	9
2.1.2	Acoustic Transmission Chain of the Human Ear	10
2.1.3	Estimation of Binaural Cues in the Central Nervous System	12
2.1.4	Source Localization from Binaural Cues	13
2.1.5	Discussion	16
2.2	Signal Processing Models of Binaural Cues	16
2.2.1	Head-Related Impulse Responses and Transfer Functions .	17
2.2.2	Auditory Filter Bank	19
2.2.3	Auto and Cross Correlation Functions	20
2.2.4	Binaural Cues of Signals	22
2.2.5	Time-Dependent Binaural Cues	25
2.3	Interpretation of Binaural Cues	26
2.3.1	Single Free-Field White Noise Sources	27
2.3.2	Diffuse Noise	28
2.3.3	Reverberant Speech Signals	30
2.3.4	Discussion	32
3	Binaural Cue Adaptation Filters	33
3.1	Signal Model	33
3.1.1	Coordinate Transform	34
3.1.2	Input and Target Signals	35
3.2	Multichannel Binaural Cue Adaptation Filter	36
3.2.1	Time-Domain Processing	36
3.2.2	STFT-Domain Processing	36
3.2.3	Comparison of Time-Domain and STFT-Domain Processing	37
3.3	Binaural Cue Adaptation Filter Design	38

3.3.1	Single-Channel Design in the Frequency Domain (SC-FD)	39
3.3.2	Multichannel Design in the Frequency Domain (MC-FD)	41
3.3.3	Single-Channel Design in the Time Domain (SC-TD)	42
3.3.4	Multichannel Design in the Time Domain (MC-TD)	43
3.3.5	Discussion	43
3.4	Comparison of Filter Design Methods	44
3.4.1	Perfect Match with Signal Model	44
3.4.2	Mismatch Between Signal and Filter Design HRTFs	49
3.5	Chapter Summary	52
4	Parameter Estimation for Binaural Cue Adaptation	55
4.1	Direction of Arrival and HRTF Estimation	55
4.1.1	Approach for Binaural Direction of Arrival Estimation	56
4.1.2	Time-Dependent Direction of Arrival Estimation	57
4.1.3	Frequency-Dependent Direction of Arrival Estimation	59
4.1.4	Effect of Slight HRTF Mismatch	63
4.2	Binaural Cue Adaptation with Spherical Head Model	67
4.2.1	Spherical Head Model	67
4.2.2	Effects of Spherical Head Model	68
4.3	Binaural Cue Adaptation with Reverberant Speech	71
4.3.1	Reverberant Signals	71
4.3.2	Performance Evaluation	73
4.4	Chapter Summary	75
5	Coherence-Adaptive Binaural Cue Adaptation Filters	77
5.1	Signal Model with Primary and Ambient Components	77
5.1.1	Input and Target Signals	78
5.1.2	Statistical Properties of Signal Components	78
5.2	Derivation of Optimal Filters	79
5.2.1	Wiener-Hopf Equations	79
5.2.2	Multichannel Wiener Filter	80
5.2.3	Multichannel Coherence-Adaptive BCA (MC-CA)	81
5.3	Relation to Primary-Ambient Decomposition	82
5.3.1	Intermediate Signals of MC-CA BCA Filter	83
5.3.2	Reformulation with Explicit Primary-Ambient Decomposition	83
5.4	Errors Introduced by Primary-Ambient Decomposition	85
5.4.1	Leakage, Distortion and Interference	85
5.4.2	Effect of Leakage and Distortion on BCA Filters	87
5.4.3	Target Primary and Ambient Estimation Error	88
5.5	Variations of Primary-Ambient Decomposition Filters	89
5.5.1	Multichannel Coherence-Adaptive Filter (MC-CA)	90
5.5.2	Single-Channel Coherence-Adaptive Filter (SC-CA)	90
5.5.3	Multichannel Frequency-Domain Filter (MC-FD)	92
5.5.4	Single-Channel Frequency-Domain Filter (SC-FD)	92
5.5.5	Discussion	93

5.6	Optimized Variations of Target Signals	93
5.6.1	Adaptive Reference Channel Switching	93
5.6.2	Phase-Optimized Target Ambient Component	96
5.7	Error Analysis	98
5.7.1	Target Signal Estimation Error	98
5.7.2	Perceptually Motivated Error Metrics	100
5.7.3	Frequency-Dependence of Errors	104
5.7.4	Effect of Adaptive Reference Channel Switching	106
5.8	Chapter Summary	108
6	Parameter Estimation for Coherence-Adaptive Binaural Cue Adaptation	111
6.1	Primary-Ambient Decomposition Filter Estimation	111
6.1.1	Ambient Spatial Coherence Matrix	112
6.1.2	Wiener Postfilter Estimation	113
6.1.3	Beamformer Estimation	114
6.1.4	Analysis of Estimation Bias	115
6.2	Performance with Reverberant Speech	117
6.3	Listening Experiment	120
6.3.1	Spatial Audio Quality Assessment	120
6.3.2	Listening Experiment Setup	121
6.3.3	Experimental Procedure	123
6.3.4	Assessment of Plausibility	126
6.3.5	Subject-Specific Analysis of Results	127
6.3.6	Discussion	129
6.4	Chapter Summary	130
7	Conclusion	131
A	Appendices	135
A.1	Phase Ambiguities and Auditory Band ITDs	135
A.2	Multiple Sources and Influence of Source Signal Coherence on IC .	136
A.3	Source Positions Behind the Recording Head	139
A.4	Derivation of Optimal BCA Filters	141
	Notation	143
	Bibliography	149
