Contents

Preface — VII

1 Introduction — 1
1.1 Sediment transport — **1**
1.1.1 Suspended load movement — **1**
1.1.2 Bedload transport — **1**
1.2 Theory of sediment transport — **4**

2 Physical analysis of particle movement in turbulence — 9
2.1 Statistical description of turbulence — **9**
2.1.1 Velocity distribution in turbulence — **10**
2.1.2 Acceleration distribution in turbulence — **11**
2.2 Vertical velocity distribution in open channel — **12**
2.2.1 Vertical velocity distribution derived from scale theory — **14**
2.2.2 Analysis and discussion — **16**
2.2.3 Some remarks — **23**
2.3 Formation process of riverbed clusters — **24**
2.4 Summaries — **28**

3 Vertical distribution of suspended sediment under steady flow — 30
3.1 Physical basis — **30**
3.2 Improved models based on the Rouse formula — **32**
3.2.1 Model 1 (M1) — **32**
3.2.2 Fractional derivative advection-diffusion equation model — **32**
3.2.3 Model 2 (M2) — **33**
3.2.4 Power law model — **33**
3.2.5 Wang model — **34**
3.2.6 Two-phase flow model — **34**
3.3 Comparison and discussion — **34**
3.4 Fractional index of fractional derivative model and hydraulic parameters — **39**

4 Fractal derivative models for suspended-sediment transport in steady flows — 42
4.1 Background — **42**
4.2 Methodology development — **44**
4.2.1 Hausdorff fractal derivative model — **44**
4.3 Model applications and experimental data analysis — **46**
4.4 Model comparison and parameter analysis — **47**
4.4.1 Impact of parameters on sediment profiles — **47**

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

4.4.2 Model comparison — 51
4.4.3 Physical interpretation and experimental verification — 53
4.5 Summaries — 54

5 Nonlocal bed-load transport model from regional to global scales — 58
5.1 Laboratory experiments of nonuniform bed-load sediment — 58
5.1.1 Flume experiments for mobile armoring layer — 59
5.2 Fractional derivative global models — 64
5.2.1 Model development — 64
5.2.2 Numerical methods for solving fractional derivative models — 67
5.2.3 Model results and applications — 74
5.3 Peridynamic differential operator regional nonlocal model — 80
5.3.1 Peridynamic differential operator — 80
5.3.2 Regional nonlocal model development — 82
5.3.3 Model results and applications — 86
5.4 Summaries — 101

6 Continuous time random walk model for anomalous diffusion in bed-load transport — 102
6.1 Introduction — 102
6.2 Lagrangian description of the CTRW model — 104
6.2.1 Model derivation — 104
6.2.2 Model applications — 108
6.3 Eulerian description of the CTRW model — 113
6.3.1 Model development — 115
6.3.2 Numerical simulations — 127
6.3.3 Model applications — 130
6.4 Summaries — 132

7 Fractal derivative models for bed-load transport — 134
7.1 Introduction — 134
7.2 Methodology development — 135
7.2.1 Definition of the Hausdorff fractal derivative — 135
7.2.2 Hausdorff fractal derivative model — 136
7.3 Experimental setup — 137
7.4 Experimental data analysis — 138
7.4.1 Flume experiment with a continuous source — 138
7.4.2 Flume experiment with an instantaneous source — 140
7.5 Comparison between the HADE model and the fractional derivative model — 142
7.6 Future work on the mathematical model and flume experiment — 144

8 Anomalous bed-load transport behaviors on fractal riverbed — 145
8.1 Anomalous bed-load transport behaviors on spliced fractal mediums — **145**
8.1.1 Description of random-walk simulation — **148**
8.1.2 Influence of fractal characteristics on bed-load transport — **150**
8.1.3 Analysis of physical parameters based on the time fractional derivative equation — **154**
8.2 Anomalous bed-load transport behaviors on realistic riverbed clusters — **159**
8.3 Summaries — **163**

9 Perspectives — 164

Bibliography — 167

Index — 179
