Abstract	III
Kurzfassung	V
1 An Introduction to the Performance Evaluation of Cellular IoT Networks	1
1.1 Motivation	1
1.2 Research Challenges, Methodology and Thesis Structure	5
1.3 Scientific Contributions	9
2 Technical Basics and Requirements of the IoT	13
2.1 Networks and Applications in the Context of IoT	13
2.2 Selected Basics of Cellular IoT	20
2.2.1 Deployment Modes	20
2.2.2 Power Consumption Reduction	23
2.3 Increased Efficiency	24
2.3.1 C-IoT Optimizations	24
2.3.2 Early Data Transmission	25
2.3.3 Non-IP Data Delivery	26
2.3.4 Non-Anchor Carriers	28
2.4 Coverage Enhancement	29
3 Related Work	33
3.1 Propagation Characteristics and Coverage of IoT Networks	33
3.2 Energy and Spectral Efficiency of Cellular IoT	35
3.3 Capacity Analysis of Cellular IoT	38
4 Analysis on Coverage of Low Power Wide Area Networks	41
4.1 Empirical Measurements for Licensed Cellular Frequency Bands	41
4.1.1 Suitability Analysis of Pathloss Models for C-IoT Frequency Bands in Urban Environments	42
4.1.2 Suitability Analysis of Pathloss Models for C-IoT Frequency Bands in CSP Environments	46
4.1.3 Lessons Learned	49
4.2 Empirical Measurements for License-Free LPWAN Frequency Bands	49
4.2.1 LoRa as a Long Range IoT Network Solution for License-Free Frequency Bands	50
4.2.2 433 MHz and 868 MHz Measurement Setup	51
4.2.3 LoRa Availability Analysis	53

4.2.4	LoRa Reliability Analysis	55
4.2.5	Suitability Analysis of Path Loss Models for 433 MHz and 868 MHz	57
4.2.6	Lessons Learned	62
4.3	Evaluation of Coverage and Link Quality in LTE and NB-IoT Networks	62
4.3.1	Proposed Methods for IoT Connectivity Enhancements . .	63
4.3.2	Coverage and Link Quality Improvement	68
4.3.3	Lessons Learned	73

5 Energy Efficiency Analysis and Optimizations in Cellular IoT Networks 75

5.1	Power Consumption Modeling of Cellular IoT Devices	75
5.1.1	Power Consumption Model for NB-IoT and eMTC	76
5.1.2	Evaluation and Results	78
5.1.3	Lessons Learned	82
5.2	5G Energy Planner for Efficient and Sustainable IoT Devices . . .	84
5.2.1	Application Protocols for the IoT	85
5.2.2	Front-End	91
5.2.3	Back-End	96
5.2.4	Performance Comparison of IoT Application Protocols . . .	100
5.2.5	Lessons Learned	105
5.3	Impact of Downlink Transmit Power Reduction on NB-IoT Performance	107
5.3.1	Long-Term Signal Strength Measurements	107
5.3.2	Night Setbacks and Shut-Offs in NB-IoT Cells	109
5.3.3	Impact of Transmit Power Reduction on NB-IoT Performance	111
5.3.4	Lessons Learned	120

6 Scalability Analysis of Large Scale and High-Density NB-IoT Networks 123

6.1	System Capacity in Public NB-IoT Networks	123
6.1.1	Introducing LENA-NB	124
6.1.2	Validation of LENA-NB	127
6.1.3	Definition of Simulation Parameters	129
6.1.4	Evaluation and Results	132
6.1.5	Lessons Learned	139
6.2	Optimization of Random Access Configuration for Massive Scalability	139
6.2.1	Random Access Preamble Transmission	140
6.2.2	Analytic Random Access Model	142
6.2.3	Evaluation and Results	144
6.2.4	Lessons Learned	150

7 Conclusion and Outlook 151
7.1 Towards 5G Reduced Capability Devices 155

A Appendix 5G Energy Planner 157
A.1 5G Energy Planner Web Interface 157
A.2 Results Report for Cellular Eco-Scores 161
A.3 Cellular IoT Messages and Signals in the Lower Layer State Machines 162
A.3.1 Adaptive Modulation and Coding 166

B Appendix of Additional Information for C-IoT Network Configurations 167
B.1 System Information Blocks from NB-IoT Networks 167
B.2 ns-3 LENA-NB Feature List 174

List of Acronyms 179

List of Symbols 185

Bibliography 187

Scientific Activity Report 201
