Abstract *vii*

Zusammenfassung *ix*

Acknowledgments *xi*

Acronyms *xvii*

1 Introduction *1*
1.1 Motivation *3*
1.2 Focused research problems *6*
1.3 Structure of the thesis *8*

2 Digitalisation concepts *11*
2.1 Smart Systems *11*
2.2 3D information modelling: BIM and 3D GIS *12*

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

2.3 Internet of Things (IoT) and digital twin 15
2.4 Gameful Design 16
2.5 Virtual Reality and immersive technologies 18

3 Immersive 3D planning of total station networks 23
3.1 Brief history: 2D network design 24
3.2 State of the art: 2.5D network design 26
3.3 Challenges for the design of monitoring installations 30
3.4 Motivation for an object orientated 3D approach 33
3.5 Software realisation: VRsurv 36
3.5.1 Design with Unity 37
3.5.2 Data Templates 39
3.5.3 Usage of Virtual Reality 40
3.5.4 Related work: 3D instrument simulation 43
3.6 Implemented 3D Quality checks in VRsurv 44
3.6.1 Collision control 44
3.6.2 Set-up stability due to direct sun exposure 47
3.6.3 Orientation of prisms 50
3.6.4 Interferences caused by adjacent prisms 55
3.6.5 Visualisation of confidence ellipsoids 60
3.7 Use case: Tunnel monitoring with total stations 62
3.7.1 Task description and requirements 62
3.7.2 Console design and placement of the total station 64
3.7.3 Prism configuration and automatic target aiming 66
3.7.4 Results of the feasibility study 67
3.8 Conclusion 68
3.8.1 Improvements 68
3.8.2 Limitations 69
3.8.3 Future work 70

4 Smart total station monitoring 71
4.1 State of the art: Monitoring with total stations 72

4.1.1 Commercial monitoring solutions 72
4.1.2 Customised monitoring solutions 74
4.2 Challenges for state-of-the-art systems 75
4.3 Enhanced total station monitoring for complex sites 76
4.4 Smart prism objects 79
4.5 Avoidance of local atmospheric disturbances 82
4.5.1 Air-conditioning devices and total station monitoring 82
4.5.2 Atmospheric experiments on the roof of Graz University of Technology 83
4.5.3 Experimental digital twin application with the Unity software 86
4.5.4 Outlook: dynamic temperature acquisition with mobile platforms 87
4.6 Temporary obstruction of the line of sight 88
4.7 Conclusion 91
4.7.1 Improvements 91
4.7.2 Limitations 93
4.7.3 Future work 94

5 Immersive data visualisation with Virtual Reality 95
5.1 Brief history: from sculptures to 2D displays 96
5.2 State of the art: Conventional 2.5D viewers 98
5.3 Challenges for conventional 2.5D viewers 98
5.4 Motivation for the usage of Virtual Reality 101
5.5 Hardware development of Virtual Reality devices 103
5.6 The role of VR applications in engineering geodesy 106
5.6.1 Visualisation of 3D models and point clouds 106
5.6.2 Comprehensive multi-dimensional data investigation 107
5.6.3 Digitalisation and data filtering 112
5.6.4 Education 114
5.7 Outlook: Collaboration 117
5.8 Conclusion 118

5.8.1 Improvements *118*
5.8.2 Limitations *119*
5.8.3 Future work *120*

6 Summary and Discussion *121*
6.1 Quality improvement *122*
6.2 Discussion: Connected 3D environments *123*
6.3 Conclusion (Surveyor 4.0) *125*
6.4 Main scientific contributions *127*
