Application of Model-Based Systems Engineering Methods in Virtual Homologation Procedures for Automated Driving Functions

Till Temmen, Max-Arno Meyer, Louis Wachtmeister,
Mohammadsadegh Zabihi, Christopher Kugler, Sebastien Christiaens,
Bernhard Rumpe und Jakob Andert

Efficient data replay for AD validation: cutting costs, enhancing speed

Gregor Hordys

Virtual Validation of Driving Functions Along a Continuous Tool Chain

Michael Kochem

The AVL prototype vehicle “AutBus”: Autonomous public transport in adverse weather conditions

Armin Engstle, Diego Turrado Blanco, Felix Elrod und Mujmer Pranjali

EDAG CityBot – Automated Driving Control of a Multifunctional, Autonomous Robot Vehicle

David Münzing, Jonas Grötzinger und Alexander Vibe

The Journey to Regular Operation of a Fully Automatic Terminal Tractor at a Depot in Mixed Operation

Rüdiger Meyer

Improving 3D Object Detection for Autonomous Driving – A Case Study of Data-Driven Development

Andreas Hartmannsgruber, Christopher Pinke, Chen Jing,
Shanoop Pangottil, Ralph Grewe, Matthias Strauss, Jürgen Mottok
und Raúl Rojas

Multi-Object Tracking based on Imaging Radar 3D Object Detection

Patrick Palmer, Martin Krüger, Richard Altendorfer und Torsten Bertram

Enhancing Digital Maps with AI-Derived Confidence Information

Martin Pfeifle, Karl-Heinz Glander, Marcell Szántó und Timo Pfeifle

Process for the Validation of the Commissioning of Automated and Autonomous Vehicles in the Assembly Line

Lennard Margies und Rainer Mueller

Generation, integration, and simulation of virtual ECUs in cross-domain E/E architectures

Martin Ruehl, Barbara Kempkes und Fabian Bronner

Considering Linux for functional safety relevant system architecture: Pitfalls and Potential

Joachim Schlosser und Jens Petersohn

Start C-ITS in Cities now – Why Waiting is Not an Option

Maik Bargmann und Kathrin Hagemann

Assistance for complex driving maneuvers based on V2X communication

Thomas Otto, Ina Partzsch und Michael Klöppel-Gersdorf

Statistical Modelling of Driving Scenarios in Road Traffic using Fleet Data of Production Vehicles

Christian Reichenbächer und Jochen Hipp

How to master the challenges of successfully using ASAM OpenSCENARIO®

Simon Terres

Collaborative Steering with the Driving Automation

Robert Fuchs, Tomohiro Nakade, Syouma Edamoto und Tsutomu Tamura

Cooperative Lateral Vehicle Guidance Control Concept for Automated Vehicles with Steer-by-Wire Systems

Robert Gonschorek und Torsten Bertram

Development and qualitative evaluation of new concepts to promote level-compliant driver behavior in automated driving

Nuria Brüggemann, Sebastian Preis, Anne Pagenkopf und Arnd Engeln

7 Levels through the Garage: 3D Ego Localization for L4 Automatization

Ralph Grewe, Benedikt Lattke, Julien Seitz, Alice Natoli und Stefan Luthardt

Autonomous Driving as an Enabler for New Mobility Concepts

Henning von Watzdorf
