

Contents

General principles	1
Structure and properties of X-ray contrast media	3
Barium sulfate	3
Water-soluble contrast media	3
Chemical structure, biological behavior and use	4
Conventional, highly hypertonic contrast media in uro/angiography and CT	4
Low-osmolar contrast media, especially nonionic substances	5
Contrast media for intravenous cholegraphy	8
Contrast media for oral cholegraphy	9
Cations	10
Synthesis of water-soluble contrast media	10
Physicochemical properties of water-soluble contrast media	13
Water solubility	13
Viscosity/temperature	13
Osmolality	14
Lipophilia	14
Electrical charge.....	15
Possible uses of contrast media	16
Principles of opacification	16
Pharmaceutical product quality	20
Practical information at a glance	20
Purity of the active ingredient, by- and degradation products.....	21
Formulations.....	22
Additives	23
Microbiological quality of the finished product	24
Production under controlled environmental conditions ...	24
Production process	24

Sterile filtration, ultrafiltration and sterilization	26
Sterility test	27
Test for pyrogens	27
Preservation of product quality in hospitals and practices	28
Stability in long-term storage	
and at different temperatures	28
Sensitivity to irradiation and light	29
Tests for contamination with particles	30
Risks of microbial contamination	31
Transferring the contrast medium to sterile	
containers, disposable syringes, automatic injectors	32
Resterilization	33
Influence on laboratory tests	35
Interactions with medicines	36
Risk of contrast media use	37
General reactions (anaphylactoid reactions)	38
Prophylaxis of general reactions	38
Dose-dependent side effects	38
Prophylaxis and therapy of	
severe iodine-induced hyperthyroidism	39
Renal damage	40
Pregnant patients	40
Breast-feeding mothers	40
Pheochromocytoma	41
Sickle-cell anemia	41
Drugs and measures for the treatment	
of a contrast medium reaction	43
Further development of contrast media	46
References	47
Index	49
Commercial brands and their iodine content (g)	52
