List of Symbols XV

Part I Introduction and Survey

1 Introduction 3
1.1 Feedback Stabilization of PDE Systems 4
1.2 Trajectory Planning and Tracking Control for PDE Systems 6
1.3 Objectives of this Book 9
1.4 Outline and Structure 11
References 13

Part II Modeling and Application Examples

2 Model Equations for Non–Convective and Convective Heat Transfer 23
2.1 Non–Convective Heat Transfer 23
2.2 Convective Heat Transfer in Single Phase Flow 26
2.3 Selected Applications and Control Problems 31
2.3.1 Thermal Battery Management 31
2.3.2 Building Climate Control 33
2.3.3 Medical Applications 34
References 34

3 Model Equations for Multi–Agent Networks 37
3.1 Distributed–Parameter Modeling of Networks of Mobile Agents 38
3.1.1 Agent Models — Discrete and Continuous Formulations 38
3.1.2 Communication Topology by Discretization 44
3.2 Selected Applications and Control Problems 46
3.2.1 Consensus and Stabilization 46
3.2.2 Leader–Enabled Formation Deployment 47
References 48

Bibliografische Informationen

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

4 Model Equations for Flexible Structures with Piezoelectric Actuation 51
4.1 Continuum Mechanical Preliminaries 51
4.2 Flexible Plate with Distributed MFC Actuators 58
4.2.1 Preparations 60
4.2.2 Potential Energy, Kinetic Energy, and Virtual Work of Non–Conservative Forces 62
4.2.3 Strong Form of the Equations of Motion 66
4.2.4 Weak or Variational form of the Equations of Motion 69
4.3 Selected Applications and Control Problems 72
4.3.1 Motion Planning and Transient Elastic Shaping of Structures 72
4.3.2 Vibration Suppression and Elastic Motion Tracking 73
References 74

5 Mathematical Problem Formulation 77
5.1 General System Setting 77
5.2 Trajectory Planning and Tracking Control 79
References 80

Part III Trajectory Planning and Feedforward Control

6 Spectral Approach for Time–Invariant Systems with General Spatial Domain 83
6.1 Abstract Formulation and Spectral Analysis 85
6.1.1 Admissible Control and Observation Operators 86
6.1.2 Abstract Boundary Control Systems 87
6.1.3 Bases of Hilbert Spaces, Riesz Bases, and Spectral Operators 91
6.2 Formal Parametrization of Riesz Spectral Systems 98
6.2.1 Finite–Dimensional In–Domain and Boundary Control 99
6.2.2 Infinite–Dimensional In–Domain and Boundary Control 103
6.3 Convergence in Gevrey Classes 109
6.3.1 Operational Convergence 110
6.3.2 Convergence of the Parametrized Fourier Series 115
6.4 Admissible Trajectory Assignment for the Basic Output 118
6.4.1 Finite Time Transitions between Stationary States 118
6.4.2 Finite Time Transitions between Non–stationary States 123
6.5 Application Examples and Simulation Results 127
6.5.1 Heat and Wave Equation on 1–Dimensional Domain 127
6.5.2 Boundary Controlled Linear Diffusion–Reaction Equation on r–Dimensional Riemannian Manifold 133
6.5.3 Boundary Controlled Linear Diffusion–Convection–Reaction Equation on Parallelepiped Domain 143

6.6 Experimental Validation for a Flexible Plate with Distributed MFC Actuators 166
6.6.1 Spectral Properties and Spectral System Representation 166
6.6.2 Formal State and Input Parametrization 170
6.6.3 Convergence Analysis for Special Plate Configurations 171
6.6.4 Semi–Numeric Finite–Dimensional Realization and Numerical Convergence Indicator 173
6.6.5 Experimental Results for Feedforward and Closed–Loop Tracking Control 175
References 185

7 Formal Integration Approach for Time Varying Systems 189
7.1 Trajectory Planning Problem 190
7.1.1 Transformation into Standard Form 191
7.1.2 Boundary Control Problem 193
7.2 Formal State and Input Parametrization 194
7.2.1 Construction of a Basic Output 195
7.2.2 Uniform Series Convergence in Gevrey Classes 196
7.3 Admissible Trajectory Assignment for the Basic Output 204
7.3.1 Stationary Profiles 204
7.3.2 Admissible Trajectories for the Basic Output 205
7.3.3 Construction of Admissible Trajectories for the Basic Output 206
7.4 Extension to Multiple Input Configurations 210
7.5 Application Examples and Simulation Results 213
7.5.1 Isotropic Diffusion and Reaction 215
7.5.2 Orthotropic Diffusion and Reaction 216
References 219

Part IV Feedback Stabilization, Observer Design, and Tracking Control

8 Backstepping for Linear Diffusion–Convection–Reaction Systems with Varying Parameters on 1–Dimensional Domains 223
8.1 Stabilization and Tracking Control Problem 224
8.2 Exponentially Stabilizing State–Feedback Control 227
8.2.1 Selection of the Target System 227
8.2.2 Determination of the Kernel–PDE 230
8.2.3 Solution of the Kernel–PDE 232
8.2.4 Backstepping–Based State–Feedback Controller 240
8.2.5 Inverse Backstepping–Transformation and Exponential Stability of the Closed–Loop System 241
8.3 State–Observer with Exponentially Stable Error Dynamics 244
8.3.1 Selection of the Target System 245
8.3.2 Determination of the Kernel–PDE and the Observer Gains 246

8.3.3 Solution of the Kernel–PDE 248
8.3.4 Inverse Backstepping–Transformation and Exponential Stability of the Observer Error Dynamics 251
8.3.5 Separation Principle and Exponential Stability of the Closed–Loop System 253
8.4 Tracking Control Using Backstepping and Differential Flatness 255
8.4.1 Flatness–Based Trajectory Planning 255
8.4.2 Trajectory Assignment in Gevrey Classes Using the Backstepping Transformation 258
8.4.3 Combining Backstepping and Differential Flatness for Exponentially Stabilizing Tracking Control 260
8.5 Application Examples and Simulation Results 261
8.5.1 Trajectory Planning 263
8.5.2 Stabilization and Tracking 263
References 266

9 Backstepping for Linear Diffusion–Convection–Reaction Systems with Varying Parameters on Parallelepiped Domains 269
9.1 Stabilization and Tracking Control Problem 270
9.1.1 Transformation into Standard Form 272
9.1.2 Boundary Control Problem 273
9.2 Exponentially Stabilizing State–Feedback Control — The Single Input Case 274
9.2.1 Determination of the Kernel–PDE and Selection of the Target System 274
9.2.2 Solution of the Kernel–PDE 279
9.2.3 Backstepping–Based State–Feedback Controller 280
9.2.4 Inverse Backstepping–Transformation and Exponential Stability of the Closed–Loop System 281
9.2.5 Approximate Finite–Dimensional Realization of Backstepping–Based State–Feedback Control 283
9.3 State–Observer with Exponentially Stable Error Dynamics — The Single Output Case 284
9.3.1 Selection of the Target System 286
9.3.2 Determination of the Kernel–PDE and the Observer Gains 287
9.3.3 Solution of the Kernel–PDE 289
9.3.4 Inverse Backstepping–Transformation and Exponential Stability of the Observer Error Dynamics 290
9.3.5 Separation Principle and Exponential Stability of the Closed–Loop System 291
9.3.6 Approximate Realization of the State–Observer by means of Spatial Output Interpolation 294
9.4 Tracking Control — The Single Input and Output Case 296

9.5 Exponentially Stabilizing State–Feedback Control — The Multiple Input Case 298
9.5.1 Multi–linear Backstepping–Transformation 299
9.5.2 Determination and Solution of the Kernel–PDEs 300
9.5.3 Backstepping–Based State–Feedback Controller 303
9.5.4 Inverse Multi–linear Backstepping–Transformation and Exponential Stability of the Closed–Loop System 305
9.5.5 Approximate Finite–Dimensional Realization of Backstepping–Based State–Feedback Control 306
9.6 State–Observer with Exponentially Stable Error Dynamics — The Multiple Output Case 307
9.6.1 Multi–linear Backstepping–Transformation 309
9.6.2 Determination of the Kernel–PDEs and the Observer Gains 310
9.6.3 Solution of the Kernel–PDEs 319
9.6.4 Inverse Backstepping–Transformation and Exponential Stability of the Observer Error Dynamics 319
9.6.5 Separation Principle and Exponential Stability of the Closed–Loop System 320
9.6.6 Approximate Realization of the State–Observer by means of Spatial Output Interpolation 327
9.7 Tracking Control — The Multiple Input and Output Case 328
9.8 Application Examples and Simulation Results 329
9.8.1 Exponential Feedback Stabilization and State Estimation for an Unstable Time Varying Diffusion–Reaction System 329
9.8.2 Synchronization of Large Scale Multi–Agent Network 334
References 346

Part V Appendix

A Notation 349
A.1 Einstein Summation Convention 349
A.2 Multi–Index Notation 350
References 350

B Mathematical Background 351
B.1 Complex Analysis 351
B.2 Entire Functions 352
B.2.1 Fundamental Notions 352
B.2.2 Weierstrass Canonical Products and the Hadamard Theorem 354
B.3 Functional Analysis 356
B.3.1 Fundamental Notions and Definitions 356
B.3.2 Duality and Pivot Spaces 357

B.3.3 The Spaces X_1 and X_{-1} 358
B.3.4 Sesquilinear Forms and the Lax–Milgram Theorem 359
B.4 Auxiliary Theorems and Lemmas 360
References 360
