

Contents

1	Kinematics of a point mass	1
1.1	Trajectory, velocity, acceleration	1
1.2	Spatial motion	3
1.2.1	Spatial motion in Cartesian coordinates	3
1.2.2	Spatial motion in cylindrical coordinates	7
1.2.3	Spatial motion in natural coordinates	11
1.3	Planar motions	14
1.3.1	Cartesian coordinates	14
1.3.2	Polar coordinates	16
1.3.3	Natural coordinates	19
1.3.4	Circular motion	20
1.4	Rectilinear Motion	24
1.4.1	Introduction	24
1.4.2	Problem 1: Acceleration $a(t)$ as a function of time t	26
1.4.3	Problem 2: Acceleration $a(x)$ as a function of the distance x	31
1.4.4	Problem 3: Acceleration $a(v)$ as a function of the velocity v	33
2	Kinetics of a point mass	35
2.1	Axioms of dynamics	35
2.1.1	Lex Prima/Law of inertia	36
2.1.2	Lex Secunda/Fundamental law of dynamics	36
2.1.3	Lex Tertia/The interaction principle	37
2.2	Free and constrained motions	38
2.3	Fundamental law of dynamics for a point mass	38
2.3.1	Cartesian coordinates	38
2.3.2	Cylindrical coordinates	40
2.3.3	Natural coordinates	40
2.4	Classification of forces	43
2.4.1	Spring forces	44
2.4.2	Damping forces	44

2.4.3	Coulomb's friction law	44
2.4.4	Resistance and drag forces	45
2.5	Applications of the Newtonian axioms	46
2.5.1	Projectile motion	46
2.5.2	Constrained motions without friction	51
2.5.3	Constrained motions with friction	56
2.5.4	Free fall with air resistance	60
2.6	Impulse law	61
2.7	Angular momentum theorem	64
3	Principle of work and energy, conservation of energy	71
3.1	Work and work increment	71
3.2	Power and efficiency	75
3.3	Principle of work and energy	76
3.4	Law of conservation of energy	79
3.4.1	Forces with potential	79
3.4.2	Forces without potential	82
3.4.3	The law of conservation of energy for arbitrary systems . .	82
4	Systems of point masses	91
4.1	Introduction	91
4.2	Kinematics and kinetics of a system of point masses	93
4.3	Law of motion for the center of mass	98
4.4	Linear momentum	99
4.5	Angular momentum	100
4.6	Principle of work and energy	104
5	Rigid body motions	109
5.1	Introduction	109
5.2	Kinematics	111
5.2.1	Translation	111
5.2.2	Rotation	111
5.2.3	General motion	113
5.2.4	Velocity diagrams	114
5.3	Kinetics of rotation around a fixed axis	122
5.4	Mass moments of inertia	123
5.4.1	Rod	124
5.4.2	Cuboid	124
5.4.3	Circular disk	126
5.4.4	Circular ring disk	126
5.4.5	Steiner's theorem/parallel axis theorem	128
5.5	Kinetics of planar motions	130
5.6	Kinetics of spatial motions	139
5.6.1	Kinematics	139
5.6.2	Kinetics	140

6	Impact	147
6.1	Introduction	147
6.2	Direct centric impact	149
6.2.1	Ideally elastic impact	152
6.2.2	Ideally plastic impact	155
6.2.3	The partially elastic impact	155
6.3	Oblique centric impact	158
6.4	Direct eccentric impact	163
6.5	Oblique eccentric impact	167
7	Vibrations	169
7.1	Introduction	169
7.2	Free linear undamped vibration	170
7.3	Equivalent spring stiffnesses	176
7.3.1	Rod	176
7.3.2	Beam	177
7.3.3	Torsional rod	178
7.3.4	Parallel connection of linear elastic structural elements	178
7.3.5	Series connection of linear elastic structural elements	180
7.4	Free linear damped vibration	184
7.4.1	Case 1: $D < 1$ (underdamped system)	185
7.4.2	Case 2: $D > 1$ (overdamped system)	186
7.4.3	Case 3: $D = 1$ (critically damped system)	187
7.5	Forced undamped vibrations	189
7.6	Forced damped vibrations	192
8	Principles of dynamics	197
8.1	Dynamic equilibrium	197
8.2	D'Alembert's principle	202
8.2.1	Introduction	202
8.2.2	Generalized coordinates	204
8.2.3	D'Alembert's principle for point mass systems	207
8.2.4	D'Alembert's principle for plane rigid body systems	207
8.3	Lagrange equations of the second kind	213
9	Relative motions	223
9.1	Introduction	223
9.2	Kinematics of the relative motion of a point mass	224
9.3	Kinetics of the relative motion of a point mass	227
	Index	235
