

Contents

1	Introduction	1
1.1	Introduction	1
1.2	Types of Equilibrium	2
1.3	Buckling of Straight Beams—The Four Euler Cases	4
1.3.1	Introductory Example: Euler Case II	4
1.3.2	Euler Case I	8
1.3.3	Euler Case III	10
1.3.4	Euler Case IV	12
1.3.5	Summary of the Results	14
1.4	Structure of the Book	14
1.5	Further Reading	16
2	Systems of Rigid Beams	17
2.1	Elastically Clamped Rigid Beam	17
2.1.1	Perfect Beam	17
2.1.2	Influence of an Imperfection	21
2.1.3	Influence of a Horizontal Force	23
2.2	Rigid Beam with Lateral Elastic Support	24
2.2.1	Perfect Beam	24
2.2.2	Influence of an Imperfection	27
2.3	Rigid Beam with an Elastically Supported Joint	29
2.4	Rigid Beam with an Elastically Clamped Joint	31
2.5	Snap-Through Problems	35
2.6	Systems with n Degrees of Freedom	38
3	Beam-Columns	43
3.1	Introduction	43
3.2	Governing Differential Equation	45
3.2.1	Governing Differential Equation for Axial Compressive Load	45
3.2.2	Differential Equation for an Axial Tensile Force	49
3.3	Beam Under Transverse Single Force	50

3.4	Beam Under End Moments	52
3.4.1	Beams Under Unequal End Moments M_A and M_B	52
3.4.2	Bar Under Identical Opposite End Moments M_0	53
3.5	Statically Indeterminate Beams	54
3.5.1	Clamped Beams	54
3.5.2	Beams with Elastic Clamping	55
3.6	Influence of Pre-Deformations w_0	57
4	Buckling of Beams.	59
4.1	Elastica	59
4.1.1	Geometrically Nonlinear Solution	60
4.1.2	Linearization	67
4.2	The Four Euler Cases	69
4.2.1	Governing Equations	69
4.2.2	Euler Case I	71
4.2.3	Euler Case II	74
4.2.4	Euler Case III	77
4.2.5	Euler Case IV	78
4.3	Buckling Length.	80
4.4	Evaluation of Transcendental Buckling Conditions.	81
4.5	Elastically Supported Beams	86
4.5.1	Beam with Elastic Clamping	86
4.5.2	Beam with Elastic Support.	87
4.6	Beam on Elastic Foundation	88
5	Energetic Consideration of Beam Buckling	91
5.1	Equilibrium and Bifurcational Buckling Problems from an Energy Perspective	91
5.2	Beam Buckling from an Energy Perspective	94
5.3	The Simplified Bifurcation Criterion	98
5.4	Energetic Interpretation of the Simplified Bifurcation Criterion	99
6	Approximate Methods for Beam Buckling	103
6.1	The Rayleigh Quotient.	103
6.2	The Ritz Method	105
6.3	The Galerkin Method	108
6.4	The Finite Element Method	110
6.5	The Finite Difference Method	125
7	Flexural-Torsional Buckling.	129
7.1	Introduction	129
7.2	Torsional Buckling.	131
7.2.1	Basic Equations	131
7.2.2	Selected Exact Solutions	134

7.3	Flexural-Torsional Buckling	136
7.3.1	Governing Equations	136
7.3.2	Selected Exact Solutions	139
7.4	Energetic Treatment of Flexural-Torsional Buckling	143
7.4.1	Strain Energy	143
7.4.2	External Potential	145
7.4.3	Torsional Buckling	146
7.4.4	Flexural-Torsional Buckling of Beams with Double Symmetric Cross-Sections	148
7.4.5	Flexural-Torsional Buckling of Beams with Non-symmetric Cross-Sections	150
7.5	The Ritz Method	151
7.5.1	Torsional Buckling	152
7.5.2	Flexural-Torsional Buckling of Beams with Double Symmetric Cross-Sections	154
7.5.3	Flexural-Torsional Buckling of Beams with Unsymmetric Cross-Sections	157
7.6	The Rayleigh Quotient	159
7.6.1	Torsional Buckling	160
7.6.2	Flexural-Torsional Buckling of Beams with Double Symmetric Cross-Sections	161
7.6.3	Flexural-Torsional Buckling of Beams with Unsymmetrical Cross-Sections	163
7.7	The Finite Element Method	165
7.8	Beams with Fixed Axis of Rotation	170
7.9	Beams with Torsionally Elastic Foundation	174
8	Lateral Buckling	179
8.1	Introduction	179
8.2	The Second-Order Bending-Torsion Problem	187
8.2.1	Prerequisites	187
8.2.2	Governing Equations	189
8.2.3	Energetic Consideration	194
8.3	Governing Equations and Elementary Solutions for Lateral Buckling	200
8.3.1	Beams with Unsymmetric Cross-Sections	200
8.3.2	Beams with Single Symmetric Cross-Sections	202
8.3.3	Beams with Double Symmetric Cross-Sections	204
8.4	The Ritz Method	210
8.4.1	Introduction	210
8.4.2	Fork-Restrained Beam with Double Symmetric Cross-Section Under Uniform Line Load q_z	211
8.4.3	Fork-Restrained Beam with Double Symmetric Cross-Section Under Uniform Line Load q_z and Edge Moments M_A and M_B	214

8.4.4	Beam with Double Symmetric Cross-Section Under Arbitrary Line Load q_z Under Arbitrary Support Conditions	215
8.4.5	Beam with Fork Restraints with Single Symmetric Cross-Section Under Uniform Line Load q_z	218
8.4.6	Beam with Single Symmetric Cross-Section Under Arbitrary Line Load q_z with Arbitrary Support Conditions	220
8.5	Lateral Buckling of Beams with Fixed Axis of Rotation.	221
8.5.1	Governing Equations and Analytical Solutions	221
8.5.2	The Ritz Method	224
8.6	Lateral Buckling of Beams with Torsionally Elastic Foundation	229
8.6.1	Governing Equations and Analytical Solutions	229
8.6.2	The Ritz Method	232
9	Plate Buckling	235
9.1	Governing Equations	235
9.2	Navier Solution	239
9.2.1	Uniaxial Compressive Load.	239
9.2.2	Biaxial Load.	243
9.2.3	Dimensionless Representation.	244
9.3	Lévy-Type Solutions	247
9.3.1	Introduction	247
9.3.2	Alternative Solution Representations.	248
9.3.3	Selected Lévy-Type Solutions	251
9.4	Energy Methods for Solving Plate Buckling Problems.	256
9.4.1	Introduction	256
9.4.2	The Rayleigh Quotient.	258
9.4.3	The Ritz Method	264
9.5	Influence of the Load Case	269
9.6	Buckling of Stiffened Plates	272
9.6.1	The Ritz Method for Longitudinally and Transversely Stiffened Plates.	272
9.6.2	Minimum Stiffness.	274
9.6.3	Lévy-Type Solution for Uniaxially Compressed Longitudinally Stiffened Panels.	278
9.7	Postbuckling Behavior of Orthotropic Plates.	288
10	Introduction to Shell Buckling	301
10.1	Buckling of Circular Cylinder Shells.	301
10.1.1	Introduction	301
10.1.2	Equilibrium Conditions	302
10.1.3	Constitutive Law and Kinematic Equations.	304
10.1.4	Buckling Differential Equations	306

10.2	Closed-Form Analytical Solutions for the Circular Cylindrical Shell	307
10.2.1	Circular Cylinder Shell Under Axjal Compression	307
10.2.2	Circular Cylindrical Shell Under Radial Pressure	310
10.2.3	Circular Cylinder Shell Under Torsional Load	311
10.3	Postbuckling Behavior of Circular Cylindrical Shells Under Axial Compression.	312
10.3.1	Basic Equations	312
10.3.2	Postbuckling Behavior of a Perfect Cylindrical Shell Panel.	315
10.3.3	Postbuckling Behavior of an Imperfect Cylindrical Shell Panel	317
