Preface	vii
 Part I Introduction	 1
1 Introductions	3
1.1 An abstract for experts	3
1.2 A slow informal introduction for beginners	5
1.3 A quicker introduction	28
1.4 Book organization	35
1.5 Book genesis	37
1.6 Some open questions	38
 2 More on manifolds and on the linking number	 41
2.1 More background material on manifolds	41
2.2 On the linking number, again	48
 3 Propagators	 53
3.1 Blowing up in real differential topology	53
3.2 The configuration space $C_2(R)$	57
3.3 On propagators	61
 4 The Theta invariant	 65
4.1 The Θ -invariant of (R, τ)	65
4.2 Parallelizations of 3-manifolds and Pontrjagin classes	67
4.3 Defining a $\mathbb{Q}$ -sphere invariant from Θ	69
 5 Parallelizations of 3-manifolds and Pontrjagin classes	 75
5.1 $[(M, \partial M), (SO(3), 1)]$ is an abelian group	75
5.2 Any oriented 3-manifold is parallelizable	77
5.3 The homomorphism induced by the degree	80
5.4 On the groups $SU(n)$	83
5.5 Definition of relative Pontrjagin numbers	84
5.6 On the groups $SO(3)$ and $SO(4)$	87
5.7 Relating the Pontrjagin number to the degree	91

5.8	Properties of Pontrjagin numbers	93
5.9	More on $[(M, \partial M), (\mathrm{SO}(3), 1)]$	97
Part II The general invariants		101
6	Introduction to finite type invariants and Jacobi diagrams	103
6.1	Definition of finite type invariants	103
6.2	Introduction to chord diagrams	106
6.3	More spaces of diagrams	112
6.4	Multiplying diagrams	117
6.5	Coproduct on $\mathcal{A}(\mathcal{L})$	123
6.6	Bialgebra structures	124
7	First definitions of Z	131
7.1	Configuration spaces of Jacobi diagrams in 3-manifolds	131
7.2	Configuration space integrals	133
7.3	Configuration space integrals associated to a chord	138
7.4	First definition of Z	139
7.5	Straight links	148
7.6	Second definition of Z	151
8	Compactifications of configuration spaces	153
8.1	An informal introduction	153
8.2	General presentation of $C_V(R)$	160
8.3	Configuration spaces associated to unit normal bundles to diagonals	161
8.4	The codimension-one faces of $C(R, L; \Gamma)$	164
8.5	Detailed study of $\mathcal{S}_V(T)$	168
8.6	Blowing up diagonals	176
8.7	Blowing up ∞	179
8.8	Finishing the proofs of the statements of Sections 8.2 and 8.4	182
8.9	Alternative descriptions of configuration spaces	183
9	Dependence on the propagating forms	185
9.1	Introduction	185
9.2	Sketch of proof of Proposition 9.2	191
9.3	Cancellations of nondegenerate faces	194

10 First properties of Z and anomalies	205
10.1 Some properties of $Z(\check{R}, L, \tau)$	205
10.2 On the anomaly β	207
10.3 On the anomaly α	210
10.4 Dependence on the forms for straight links	212
10.5 The general variation for homogeneous propagating forms	215
10.6 Some more properties of Z	222
11 Rationality	225
11.1 From integrals to algebraic intersections	225
11.2 More on general propagating chains	229
11.3 Existence of transverse propagating chains	232
11.4 More on forms dual to transverse propagating chains	239
11.5 A discrete definition of the anomaly β	242
Part III Functoriality	245
12 A first introduction to the functor $\mathcal{Z}^f$	249
12.1 Extension of $\mathcal{Z}$ to long tangles	249
12.2 Definition of $\mathcal{Z}^f$ for framed tangles	255
12.3 Defining $\mathcal{Z}^f$ for combinatorial q -tangles	258
12.4 Good monoidal functors for combinatorial q -tangles	262
13 More on the functor $\mathcal{Z}^f$	267
13.1 Tangles and q -tangles	267
13.2 Definition of $\mathcal{Z}^f$ for all q -tangles	274
13.3 Properties of the functor $\mathcal{Z}^f$	277
14 Invariance of $\mathcal{Z}^f$ for long tangles	285
14.1 Singular models associated to trees	285
14.2 Configuration spaces of graphs on long tangles	298
14.3 Variations of integrals on configuration spaces of long tangles	319
15 The invariant Z as a holonomy for braids	323
15.1 On the structure of $\mathcal{V}(\Gamma)$	323
15.2 A one-form on $\check{\mathcal{S}}_B(\mathbb{C})$	340

16	Discretizable variants of $\mathcal{Z}^f$ and extensions to q-tangles	353
16.1	Discretizable holonomies	353
16.2	Variants of $\mathcal{Z}^f$ for tangles	359
16.3	Straight tangles	361
16.4	Semi-algebraic structures on some configuration spaces	369
16.5	Extending $\mathcal{Z}^f$ to q -tangles	373
17	Justifying the properties of $\mathcal{Z}^f$	389
17.1	Transversality and rationality	390
17.2	Functoriality	396
17.3	Insertion of a tangle in a trivial q -braid	402
17.4	Duplication property	404
17.5	Behavior of $\mathcal{Z}^f$ with respect to the coproduct	418
17.6	A proof of universality	420
Part IV	Universality	427
18	The main universality statements and their corollaries	429
18.1	Universality with respect to Lagrangian-preserving surgeries	429
18.2	On Dehn surgeries	432
18.3	Direct proof of a surgery formula for Θ	436
18.4	Finite type invariants of $\mathbb{Z}$ -spheres	443
18.5	Finite type invariants of $\mathbb{Q}$ -spheres	447
18.6	Identifying Θ with the Casson–Walker invariant	451
18.7	Sketch of the proof of Theorem 18.6	451
18.8	Mixed universality statements	459
19	More flexible definitions of $\mathcal{Z}$ using pseudo-parallelizations	471
19.1	Why we need pseudo-parallelizations	471
19.2	Definition of pseudo-parallelizations	475
19.3	Integration of homogeneous propagating forms along surfaces	480
19.4	Anomalous terms for pseudo-parallelizations	483
19.5	Proof of Theorem 19.17	495
20	Simultaneous normalization of propagating forms	501
20.1	Sketch	501
20.2	Proof of Proposition 20.1	504
20.3	Proof of Lemma 20.2	509

21 Much more flexible definitions of $\mathcal{Z}$ 519

 21.1 More propagating forms associated to pseudo-parallelizations 519

 21.2 Pseudo-sections associated with pseudo-parallelizations 525

 21.3 Definition of $\mathcal{Z}$ with respect to pseudo-sections 530

A Some basic algebraic topology 535

 A.1 Homology 535

 A.2 Homotopy groups 544

B Differential forms and de Rham cohomology 547

 B.1 Differential forms 547

 B.2 De Rham cohomology 549

Terminology 555

Index of notation 559

Summarizing the main definitions of $\mathcal{Z}$ 563

References 565
