

Preface	1
Basic notation and definitions	5
1 Definitions and topological properties of Carathéodory sets	7
1.1 Definitions and first examples	7
1.2 Properties of connectivity	9
1.3 Accessible boundary points	14
2 Carathéodory sets and conformal maps	19
2.1 Some background on conformal maps	19
2.2 Carathéodory domains and conformal maps	24
3 Uniform and pointwise approximation on Carathéodory sets	37
3.1 Uniform approximation by polynomials	37
3.2 Uniform harmonic approximation	42
3.3 Pointwise polynomial approximation	49
3.4 Uniform algebras on Carathéodory sets	57
3.5 Orthogonal measures on Carathéodory sets	62
3.6 Approximation by polyanalytic functions	73
4 Approximation in L^p-norms on Carathéodory sets	77
4.1 Approximation in Bergman spaces	77
4.2 Some studies related with Hilbert space structure of $A^2(G)$	90
4.3 Topics on weighted Bergman spaces	99
4.4 Topics on Hardy spaces	105
4.5 Approximation by polynomials on boundaries of domains	114
5 Miscellaneous results about Carathéodory sets	119
References	131
