4	Contact Behavior of Current-Carrying Connections	25
4.1	Physical Fundamentals of Point, Line, and Surface Contact	25
4.1.1	Physical Model	25
4.1.2	Performance Factor: Evaluating Connections with Elongated Conductors	28
4.1.3	Voltage Drop: Evaluating Plug-in and Sliding Connections	30
4.2	Mechanical Contact Behavior	32
4.2.1	Screwed Connections	35
4.2.2	Compression Connections	40
4.2.3	Plug-in connections	45
4.2.4	Current-Induced Forces during Operation	48
4.3	Electrical Contact Behavior	58
4.3.1	Empirical Relationships	59
4.3.2	Electrical Models of Current-Carrying Connections with Line or Plane Contacts	63
4.3.3	Determining the model sizes of the electrical contact behavior	65
4.3.4	Application Examples	70
4.4	Thermal Contact Behavior	73
4.4.1	Thermal Contact Behavior	73
4.4.2	Voltage-Temperature Relationship	78

4.5	Coupling of Influencing Factors	86
4.5.1	Screw connection	87
4.5.2	Compression Connections	109
4.5.3	Plug-in Connections.	111
	References.	127
5	Long-Term Behavior of Current-Carrying Connections	133
5.1	Aging Mechanisms	137
5.1.1	Force Reduction	137
5.1.2	Diffusion	144
5.1.3	Chemical Reactions	153
5.1.4	Wear	164
5.1.5	Electromigration.	172
5.2	Interaction of Aging Mechanisms and Resulting Lifetime Characteristics.	177
5.3	Material Combinations.	181
	References.	189
6	Designing Current-Carrying Connections	195
6.1	Type of Connection	195
6.2	Materials	196
6.2.1	Conductor and Coating Material	196
6.2.2	Special Features in Corrosive Environments	200
6.3	Design	201
6.3.1	Screw Connection.	201
6.3.2	Compression Connections	202
6.3.3	Plug-in and Sliding Connections	207
6.3.4	Further Joining Methods	213
6.4	Continuous Operation	216
6.4.1	Screw Connection.	217
6.4.2	Compression Connections	219
6.4.3	Plug-in and Sliding Connections	219
6.5	Short-term Load.	220
6.5.1	Step A: Determining the mechanical load	222
6.5.2	Step B: Determining the thermal load	222
6.5.3	Alternative: Design Based on Short-Term Current Tests.	224
6.6	Assembly and Quality of Contact Surfaces	228
6.6.1	Pretreatment of the Contact Surface	228
6.6.2	Lubrication of the the Contact Surface	229
6.6.3	Quality of Coatings on the Contact Surface.	234

6.7	Examples	236
6.7.1	Connection 1: Busbar to cable in a low-voltage cable distribution cabinet (LVCDC)	236
6.7.2	Connection 2: Two identical overhead line conductors	241
6.7.3	Connection 3: Movable Contact Piece to Support Element in a High-Voltage Switching Device	247
	References.	250
7	Test Procedures	255
7.1	Influencing Factors in Test Procedures	256
7.1.1	Load Variables	256
7.1.2	Evaluation Parameters	265
7.2	Standardized Test Procedures in Power Engineering according to Application Areas.	266
7.3	Development Accompanying for Special Applications	275
	References.	279
8	Conclusion	283
