Preface *xi*

Part I Smart and Multifunctional Materials for Tissue Engineering *1*

1	Electroactive Materials for Tissue Engineering	3
	<i>Teresa Marques-Almeida, Estela O. Carvalho, Unai Silvan, Senentxu Lanceros-Méndez, and Clarisse Ribeiro</i>	
1.1	Introduction	3
1.2	Relevance of the Electrical Signals in the Human Body	4
1.3	Relevance of the Electrical Signals in Cell Processes	7
1.4	Types of Electroactive Materials	10
1.4.1	Conductive Materials	10
1.4.2	Piezoelectric Materials	12
1.4.3	Magnetoelectric Materials	14
1.4.4	Thermoelectric Materials	15
1.5	Relevance of the Material's Architecture	17
1.5.1	Films	17
1.5.2	Electrospun fibers	19
1.5.3	3D Porous Scaffolds	20
1.5.4	Hydrogels	21
1.6	Final Remarks	22
	Acknowledgments	22
	References	22
2	Piezoelectric, Triboelectric and Magnetoactive materials for Tissue Engineering	35
	<i>Pratap N. Soni and Dipankar Mandal</i>	
2.1	Introduction	35
2.1.1	Working Principle	36
2.1.1.1	Piezoelectric	36
2.1.1.2	Triboelectric	39

2.1.1.3	Magnetoactive	42
2.2	Piezoelectric, Triboelectric, and Magnetoactive Materials in Tissue Engineering	43
2.2.1	Piezoelectric Materials in Tissue Engineering	45
2.2.2	Triboelectric Materials in Tissue Engineering	60
2.2.3	Magnetoactive Materials in Tissue Engineering	69
2.3	Summary and Conclusion	74
	References	76
3	Shape-memory Polymers for Tissue Engineering Applications	91
	<i>Fangyuan Zheng, Ane García-García, Isabel Moreno-Benítez, Leire Ruiz-Rubio, Leyre Pérez-Álvarez, and José L. Vilas-Vilela</i>	
3.1	Introduction	91
3.2	Shape-memory Effect in Polymers	93
3.3	Shape-memory Mechanism and Molecular Structure	95
3.3.1	SMPs Based on Phase Transitions	97
3.3.2	SMPs Based on Supramolecular Interactions	98
3.3.3	SMPs Based on Dynamic Interactions	99
3.4	SMP Triggered by Stimuli Different to Temperature	100
3.4.1	Photo-triggered SMPs	101
3.4.2	Solvent and Other Triggers of SMPs	102
3.5	Requirements of SMPs as Scaffolds	104
3.5.1	Biocompatibility	105
3.5.2	Mechanical Properties	105
3.5.3	Biodegradability	106
3.5.4	Porosity	107
3.5.5	Sterilizability	108
3.5.6	Motion Requirement	109
3.6	Tissues-Specific Requirements	110
3.6.1	Bone Tissues	110
3.6.2	Cardiovascular Tissues	111
3.6.3	Cartilage Tissues	112
3.6.4	Neural Tissue	112
3.7	Shape-memory Homopolymers and Copolymers for Tissue Engineering	113
3.8	Shape-memory Composites for Tissue Engineering	121
3.9	Shape-memory Hydrogels for Tissue Engineering Applications	129
3.10	Conclusions and Future Trends	133
	References	135
4	Photoresponsive Materials for Tissue Engineering	149
	<i>Mikel Rincón-Iglesias, Cristian Mendes-Felipe, Senentxu Lanceros-Mendez, and Javier Reguera</i>	
4.1	Introduction	149
4.2	Photoisomerizable Materials	151

- 4.3 Photopolymerizable Materials 154
- 4.4 Photocleavable Materials 158
- 4.5 Photothermal Materials 163
- 4.6 Conclusions and Outlook 167
- Acknowledgments 168
- References 168

- 5 Controlled Degradation of Stimuli-Responsive Materials for Tissue Engineering 181**
Teresa Carranza, Ainhua Irastorza, Ander Izeta, Pedro Guerrero, Koro de la Caba, and Alaitz Etxabide
- 5.1 Introduction 181
- 5.2 Degradation Mechanisms 183
 - 5.2.1 Biological-Activity-Mediated Degradation 183
 - 5.2.2 Chemical Degradation 186
 - 5.2.3 Physical Degradation 189
- 5.3 Degradation Measurement Techniques 191
 - 5.3.1 Characterization of the Degradation Process *In Vitro* 191
 - 5.3.2 Characterization of the Degradation Process *In Vivo* 194
 - 5.3.3 Characterization of Degradation Products 196
 - 5.3.3.1 Identification and Quantification of Degradation Products *In Vitro* 196
 - 5.3.3.2 Cytotoxicity Evaluation *In Vitro* 197
 - 5.3.3.3 Toxicokinetic Studies *In Vivo* 198
 - 5.3.3.4 Local Effects after Implantation 199
- 5.4 Conclusions and Future Perceptions 200
- References 201

Part II Tissue Regeneration Strategies Based on Smart and Active Biomaterials 211

- 6 Active Biomaterials for Bone Tissue Regeneration 213**
Martina Marcotulli, Lucia Iafrate, Efsun Senturk, Andrada Pica, Franco Marinozzi, Fabiano Bini, Giancarlo Ruocco, Chiara Scognamiglio, and Gianluca Cidonio
- 6.1 Introduction 213
- 6.2 Ultrasound-Based Strategies for the Engineering of Biomaterials for Bone Regeneration 214
 - 6.2.1 Ultrasound in Regenerative Medicine 214
 - 6.2.2 Bioeffects Induced by US 215
 - 6.2.2.1 Differentiation 215
 - 6.2.2.2 Proliferation 217
 - 6.2.2.3 Migration 217
 - 6.2.3 US-stimulated Biomaterials for Tissue Engineering Applications 217
 - 6.2.3.1 Acoustofluidics 218

- 6.2.3.2 US-triggered Release of Drugs 219
- 6.2.3.3 US-triggered Piezoelectric Biomaterials 220
- 6.2.3.4 US-assisted Synthesis 220
- 6.2.4 Future Development for US-driven Bone Regeneration 221
- 6.3 Magnetic Forces to Assist Biomaterials in Bone Formation 221
 - 6.3.1 Magnetic Materials in Regenerative Medicine 221
 - 6.3.1.1 Magnetic Fields 222
 - 6.3.1.2 Magnetic Materials 222
 - 6.3.1.3 Biosafety of Magnetic Forces 222
 - 6.3.2 Production and Activation of Magnetic Biomaterials 223
 - 6.3.3 Magnetic Stimulation of Biomaterials 223
 - 6.3.3.1 Magnetism and Electricity Correlation on Bone Healing 223
 - 6.3.3.2 Magnetic Hyperthermia 224
 - 6.3.4 Magnetically Induced Effects in Bone Tissues 224
 - 6.3.4.1 Magnetic to Mechanical Cell Stimulation 224
 - 6.3.4.2 Targeted Release of Growth Factors or Drugs 225
 - 6.3.5 Harnessing Magnetic Biomaterials to Tackle Bone Regeneration 226
 - 6.3.5.1 Bone Fractures Healing by Magnetic Biomaterials 226
 - 6.3.5.2 Magnetic Therapy for Osteoporosis 226
 - 6.3.5.3 Magnetic-based Treatments for Bone Cancer 226
 - 6.3.6 Future Perspectives for Magnetic Stimuli of Bone Repair 227
- 6.4 Piezoelectric Materials as Biomimetic Substrate for Skeletal Engineering 227
 - 6.4.1 Bone is a Piezoelectric Material 227
 - 6.4.2 Collagen Fibrils and the Role in Bone Piezoelectric Behavior 228
 - 6.4.3 Biomimetic Bone Piezomaterials 229
 - 6.4.4 New Approaches Harnessing Piezoelectric Behavior of Skeletal Tissue 231
 - 6.4.5 Future Outlook of Piezoelectric Bioactive Skeletal Materials 232
- References 233

- 7 Muscle and Heart Tissue Regeneration Based on Stimuli-Responsive Materials 247**
Sylvie Ribeiro, Clarisse Ribeiro, and Senentxu Lanceros Mendez
 - 7.1 Introduction 247
 - 7.2 Skeletal and Cardiac Muscle Organization 248
 - 7.2.1 Skeletal Muscle Tissue 248
 - 7.2.1.1 The Anatomy of the Vasculature in Skeletal Muscle 250
 - 7.2.1.2 Nerve Supply in Skeletal Muscle 251
 - 7.2.2 Cardiac Muscle Tissue 252
 - 7.2.2.1 Other Relevant Components of Cardiac Tissue 253
 - 7.3 Stimuli-Responsive Materials for Muscle Tissue Engineering 254
 - 7.3.1 External Regulated Stimuli-Responsive Materials in Muscle Tissue Regeneration 256
 - 7.3.1.1 Temperature-Responsive Materials 256

- 7.3.1.2 Light-Responsive Materials 257
- 7.3.1.3 Electro-Responsive Materials 258
- 7.3.1.4 Ultrasound Stimuli-Responsive Materials 261
- 7.3.1.5 Magnetic Stimuli-Responsive Materials 262
- 7.3.2 Internally Regulated Stimuli-Responsive Materials for Muscle Tissue Regeneration 264
 - 7.3.2.1 Redox-Responsive Materials 264
 - 7.3.2.2 pH-Responsive Materials 265
- 7.4 Conclusions and Future Perspectives 268
 - Acknowledgments 268
 - References 269

8 Neural Tissue Regeneration Based on Stimuli-Responsive Materials 277
Tiffany S. Pinho, Belém Sampaio-Marques, Clarisse Ribeiro, Cristiana B. Cunha, Senentxu Lanceros-Mendez, and António J. Salgado

- 8.1 Introduction 277
- 8.2 Electroactive Smart Polymers: An Overview 279
- 8.3 Electroactive Smart Polymers for *In Vitro* Neuronal Outgrowth and Differentiation 280
 - 8.3.1 Electrically Conductive Materials 280
 - 8.3.2 Piezoelectric Polymers 282
 - 8.3.3 Ionic Conductive Polymers 283
- 8.4 Electroactive Smart Polymers as a Regenerative Approach for Neural Regeneration *In Vivo* 285
 - 8.4.1 Spinal Cord Injury 285
 - 8.4.2 Brain Injury 287
- 8.5 Major Challenges and Future Directions 290
- 8.6 Final Remarks 290
 - References 291

9 Skin Tissue Regeneration Based on Stimuli-Responsive Materials 303
Igor Irastorza, Beatriz Jiménez-Leiva, Gaskon Ibarretxe, Lucía Jiménez-Rojo, Clarisse Ribeiro, Senentxu Lanceros-Méndez, and Unai Silvan

- 9.1 Introduction 303
- 9.2 Structural Organization of the Skin 303
- 9.3 Physiology of Wound Healing 308
 - 9.3.1 Hemostasis 309
 - 9.3.2 Inflammatory Phase 309
 - 9.3.3 Proliferation Phase 310
 - 9.3.4 Wound Remodeling and Contraction 310
- 9.4 Biomaterials for Skin Regeneration 311
 - 9.4.1 Biomaterial Requirements for Skin Regeneration 311
 - 9.4.1.1 Biocompatibility 311

9.4.1.2	Scaffold Architecture	311
9.4.1.3	Biodegradability	312
9.4.1.4	Porosity	313
9.4.1.5	Functionalization with Bioactive Molecules	313
9.4.1.6	Mechanical Properties	313
9.4.1.7	Surface Wettability, Water Uptake, and Vapor Transmission	314
9.5	Stimuli-responsive Materials	314
9.5.1	Endogenous Triggers	314
9.5.1.1	pH	314
9.5.1.2	Temperature	315
9.5.1.3	Redox Potential	315
9.5.1.4	Mechanical Stress	316
9.5.2	Exogenous Triggers	317
9.5.2.1	Light	317
9.5.2.2	Ultrasound	317
9.5.2.3	Magnetic Fields	318
9.6	Future Perspectives	319
	Acknowledgments	319
	References	319
10	Cancer Therapies Based on Stimuli-Responsive Materials	329
	<i>Giuliana Mosconi, Micaela A. Macchione, and Marcelo R. Romero</i>	
10.1	A Brief Review	329
10.2	Chemotherapy and the Role Played by Stimuli-Responsive Materials	330
10.3	Stimuli Types and Targeting	331
10.3.1	Stimuli Based on pH	332
10.3.2	Redox Stimuli	334
10.3.3	Enzyme-Responsive Materials	334
10.3.4	UV-Visible—Photodynamic Therapy	337
10.3.5	NIR and Microwave Radiation—Photothermal Therapy and Temperature/Light-Trigger Chemotherapy	339
10.3.6	NIR and Microwave Radiation—Thermo-responsive Polymers	339
10.3.7	Ultrasound Waves	342
10.3.8	Magnetic Fields and Magnetic Materials	344
10.3.9	Neutron Beams and Specific-responsive Materials	344
10.3.10	Others: Multi-responsive Systems	346
10.4	Concluding Remarks and Perspectives	346
	Acknowledgments	346
	References	347
	Summary and Outlook	351
	<i>Clarisse Ribeiro, Unai Silvan, and Senentxu Lanceros-Méndez</i>	
	Acknowledgments	353
	Index	355
