List of Figures	XI
List of Tables	XV
Nomenclature	XIX
1 Introduction and Motivation	1
1.1 Energy System Optimization	2
1.1.1 Uncertainty in Energy System Optimization	2
1.1.2 Opportunities and Challenges of Stochastic Optimiza- tion of Energy Systems	3
2 State of Knowledge	5
2.1 Energy System Optimization (ESO)	5
2.1.1 Aims of Energy System Optimization	9
2.1.2 Methods and Models	15
2.2 Uncertainty in Energy Systems	24
2.2.1 Origins of Uncertainty	25
2.2.2 Prediction of Technological Innovation and Development	26
2.2.3 Uncertainty and Probability in Energy System Models	32
2.2.4 Taking Uncertainty into Account	36
3 Research Objectives and Methods	41
3.1 Research Objectives	41
3.2 Methods	42
4 Systematic Errors if Uncertainty is Ignored	45
4.1 Theoretical Considerations	46
4.2 Model to Investigate the Effects	48

4.3	Quantification of Effects	49
4.3.1	Effect of Distribution Width and Number of Uncertain Parameters	49
4.4	Summary of Systematic Errors if Uncertainty is Ignored	55
5	Optimization Model of the German Energy System under Uncertainty	57
5.1	Energy Demand	60
5.1.1	Electricity	62
5.1.2	Transport	63
5.1.3	Heating demand	69
5.2	Generation and Transformation	73
5.2.1	Fluctuating Renewable Electricity Generation	75
5.2.2	Renewable Generation	76
5.2.3	Gas to Electricity Processes	79
5.2.4	Electricity to Gas	84
5.2.5	Gas to Heat	85
5.2.6	Electricity to Heat	87
5.2.7	Storage Applications	88
5.2.8	Fossil Energy Carriers	94
5.3	Probable Cost Reductions	95
5.4	Optimization Planning	100
6	Results	103
6.1	Results of the Scenario Approach	104
6.1.1	Renewable Generation and Fossil Consumption	105
6.1.2	Electricity Storage	106
6.1.3	Power to gas technologies	106
6.1.4	Gas Storage	107
6.1.5	Gas to Power Technologies	107
6.1.6	Power to Heat Technologies	108
6.1.7	Gas Heating Technologies	109
6.1.8	Heat Storage Technologies	110
6.1.9	Summary of the Scenario Results	111
6.2	Stochastic Optimization	113
6.2.1	Renewable Generation	114

6.2.2	Electricity Storage	115
6.2.3	Gas Storage	117
6.2.4	Gas to Power Technologies	118
6.2.5	Power to Heat Technologies	118
6.2.6	Gas Heating Technologies	120
6.2.7	Heat Storage Technologies	121
6.2.8	Summary of the Stochastic Optimization Results in the Renewable Case	123
6.3	Patterns within the Stochastic Optimization Results	126
6.3.1	Factor Effect Analysis Applied to the Stochastic Opti- mization Results	127
6.3.2	Clustering of the Stochastic Optimization Results . . .	133
6.3.3	Summary of Patterns within the Stochastic Optimiza- tion Results	139
6.4	Stochastic Optimization with lower Computational Demand .	140
6.4.1	Stochastic Optimization with less Optimization Runs .	140
6.4.2	Factor Effect based Meta Model	143
6.4.3	Comparison of Benchmark Results With Reduced Com- putational Demand Approaches	151
6.4.4	Summary of the Comparison of Benchmark Results with Reduced Computational Demand Approaches . .	162
7	Discussion	165
7.1	Comparison of stochastic and scenario results	165
7.2	Stochastic optimization with reduced computational effort . .	171
8	Summary and Conclusion	173
8.1	Summary of the Influence of Uncertainty	173
8.2	Summary Energy System Optimization under Uncertainty . .	174
8.3	Conclusions, Research Demand and Significance for Decision- Making	176
9	Bibliography	179
A	Investigation of Systematic Errors	217
A.1	Latin Hyper Cube and Transformation	220

B Energy System Opimization 223
 B.1 Probable Cost Reductions 223

C Results 227
 C.1 Stochastic Optimization Results at 95 % Emission Reduction . 227
 C.2 Stochastic Optimization Results at 80 % Emission Reduction . 235
 C.3 Patterns within the optimization results - 95% emission reduction 243
 C.4 Patterns within the optimization results - 80 % emission reduction 249
 C.5 Clustering comparison of benchmark and reduced demand
 stochastic analysis 249
