

Duc Truong Pham and Liu Xing

Neural Networks for Identification, Prediction and Control

With 98 Figures

London Berlin Heidelberg New York
Paris Tokyo Hong Kong
Barcelona Budapest

Contents

Chapter 1 Artificial Neural Networks	1
1.1 Types of Neural Networks	1
1.1.1 Structural Categorisation	1
1.1.2 Learning Algorithm Categorisation	2
1.2 Example Neural Networks	3
1.2.1 Multi-layer Perceptron (MLP)	4
1.2.2 Learning Vector Quantization (LVQ) Network	7
1.2.3 CMAC Network	9
1.2.4 Group Method of Data Handling (GMDH) Network	12
1.2.5 Hopfield Network	15
1.2.6 Elman and Jordan Nets	16
1.2.7 Kohonen Network	17
1.2.8 ART Network	19
1.3 Summary	21
References	21
 Chapter 2 Dynamic System Identification Using Feedforward Neural Networks	 25
2.1 Dynamic System Descriptions	25
2.1.1 Input-output Model	25
2.1.2 State-space Model	26
2.2 Identification Based on System Inputs and Outputs	27
2.3 Identification Based on Measurable System States	29
2.4 Input-output Model Identification	30
2.4.1 Simulation Investigations	31
2.4.2 Results	36
2.5 State-space Model Identification	39

2.5.1	Plant Model and Identification Architecture	39
2.5.2	Simulations	41
2.6	Discussion	41
2.6.1	Hybrid Networks	41
2.6.2	Input-output versus State-space Modelling	42
2.7	Analysis of the Hybrid Network	43
2.8	Summary	44
	References	45

Chapter 3 Dynamic System Modelling Using Recurrent Neural Networks 47

3.1	Basic Elman Network	48
3.1.1	Structure and Principle of Elman Network	48
3.1.2	Analysis of Elman Network	49
3.2	Modified Elman Network	51
3.3	Dynamic System Modelling	52
3.4	Further Analysis of Elman Networks	56
3.4.1	Dynamic Backpropagation in Elman Networks	56
3.4.2	Relation with the Modified Elman Network	58
3.5	Summary	60
	References	60

Chapter 4 Modelling and Prediction Using GMDH Networks 63

4.1	N-Adaline Networks and Widrow-Hoff Learning	64
4.2	GMDH Network Based on N-Adalines	65
4.3	Applications	69
4.4	Discussion	80
4.5	Summary	81
	References	81

Chapter 5 Financial Prediction Using Neural Networks 83

5.1	Stock Market Prediction	83
5.1.1	System Overview	84
5.1.2	Prediction Simulation	85
5.2	Currency Exchange Rate Prediction	86
5.2.1	Prediction Based on Neural Networks	87
5.3	Data Sets Adopted for Simulation	89

5.4	Prediction Based on GMDH Networks	93
5.5	Prediction Based on Multilayer Perceptron Networks	99
5.6	Prediction Based on Recurrent Networks	103
5.7	Discussion	107
5.8	Summary	109
	References	110

Chapter 6 Neural Network Controllers 111

6.1	Neural Network Controllers	112
6.1.1	CMAC	112
6.1.2	Hierarchical Neural Network Model	116
6.1.3	Multilayered Neural Network Controller	119
6.2	Comparison of Neural Network Controllers	122
6.2.1	Hierarchical Neural Network Model and Multilayered Neural Network Controller	122
6.2.2	Multilayered Neural Network Controller (or Hierarchical Neural Network Model) and CMAC	123
6.2.3	Common Aspects of Neural Network Controllers	124
6.2.4	Comparison with Adaptive Controllers	124
6.3	Summary	126
	References	126

Chapter 7 Neuromorphic Fuzzy Controller Design 131

7.1	Integrating Neural Networks and FLCs	131
7.1.1	Representation of a Simple Fuzzy Logic Controller as a Neural Network	132
7.1.2	Learning Algorithm	135
7.2	Results of Neuromorphic Fuzzy Controllers Design	137
7.2.1	Plant 1	137
7.2.2	Plant 2	140
7.3	Summary	142
	References	142

Chapter 8 Robot Manipulator Control Using Neural Networks 143

8.1	Modelling of a Multi-joint Robot	144
8.2	Control System	147
8.3	Application to a Two-joint Robot Arm	149

8.4	Discussion	158
8.5	Summary	163
	References	164
Appendix A Introduction to Some Conventional Techniques of Identification, Prediction and Control		167
Appendix B Fuzzy Sets and Fuzzy Logic Control		177
Appendix C Genetic Algorithms		189
Appendix D Program: Feedforward Network for System Identification		197
Appendix E Program: Modified Elman Network for Identification		207
Appendix F Program: GMDH Network for Prediction		217
Author Index		231
Subject Index		235
