

CONTENTS

A	Maxwell-equations	1
A.1	Fields and test charges	1
A.2	Physical properties of the electric charge	1
A.3	Maxwell-equations	2
A.3.1	Gauß-law for electric fields	2
A.3.2	Non-existence of magnetic charges	3
A.3.3	Faraday-law and induction	3
A.3.4	Ampère-law	4
A.4	Linear media for electrodynamics	4
A.5	Conservation of electric charge	5
A.6	Electromagnetic duality	6
A.7	Maxwell-equations under discrete symmetries	7
A.8	Electrostatic potential	9
A.9	Potential energy of a static charge distribution	14
A.10	Boundary conditions for fields on surfaces	15
B	Potential theory	17
B.1	Potential theory	17
B.2	Systematic construction of Green-functions	17
B.3	Green-theorems	20
B.4	Spherical multipole expansion	22
B.5	Cartesian multipole expansion	27
B.6	Potential energy of a charge distribution in a potential	30
B.7	Magnetic vector potential and gauging	31
C	Dynamics of the electromagnetic field	35
C.1	Potentials and wave equations	35
C.2	Solving the wave equation for potentials	38
C.3	Wave equation for fields	39
C.4	Electromagnetic waves in matter and the telegraph equation	41
C.5	Energy transport and the Poynting vector	42
C.6	Momentum transport and the Poynting linear form	44
C.7	Time-dependent Green-functions and retardation	47
C.8	Liénard-Wiechert potentials	52
C.9	Anatomy of partial differential equations	53
C.9.1	Hyperbolic, parabolic and elliptical differential equations	54
C.9.2	Wave-equation and its reductions	56
D	Special relativity	59
D.1	Lorentz-transforms	59
D.2	Lorentz-invariants	61
D.3	Rapidity	62
D.4	Spacetime symmetries	63
D.5	Lorentz-group as a Lie-group	66
D.6	Adding velocities	68
D.7	Relativistic effects	69
D.7.1	Constancy of the speed of light	70
D.7.2	Relativity of simultaneity	70
D.7.3	Time dilation	70

D.7.4	Length contraction	72
D.7.5	Causal ordering inside the light cone	72
D.8	Proper time	72
D.9	Relativistic motion	75
D.10	Relativistic dispersion relations	77
E	Covariant electrodynamics	81
E.1	Covariant formulation of electrodynamics	81
E.2	Maxwell's equations	82
E.2.1	Inhomogeneous Maxwell equations	82
E.2.2	Homogeneous Maxwell equations	83
E.3	Relativistic potentials and gauging	84
E.4	Dual field tensors and the Bianchi-identity	86
E.5	Covariant electrodynamics	89
E.6	Lagrange-density for the dynamics of fields	91
E.6.1	Scalar field on a Euclidean background	91
E.6.2	Scalar field on a Lorentz background	92
E.6.3	Maxwell field on a Lorentz background	93
E.6.4	Maxwell field in matter	95
E.7	Optics	96
E.8	Gauge-invariance and charge conservation	98
E.9	Conservation of energy and momentum	98
E.9.1	Scalar field on a Lorentz background	98
E.9.2	Maxwell field on a Lorentz background	101
E.10	Maxwell's equations under discrete symmetries, revisited	102
E.11	Links to particle physics	103
E.11.1	Axions and pseudoscalar particles	103
E.11.2	Massive fields, Proca-terms and the Higgs-mechanism	104
E.11.3	Modifications of the Coulomb-potential	105
E.12	Conformal invariance of the Maxwell-theory	107
E.13	Gauge-invariance as a geometric concept	107
E.14	Motion of particles through spacetime	109
E.14.1	Fermat's or Hamilton's principle?	109
E.14.2	Relativistic horizons	111
E.14.3	Tachyons and tardyons	112
X	Fourier-transforms and orthonormal systems	115
X.1	Scalar products and orthogonality	115
X.2	Fourier-transforms	118
X.3	Convolutions with Fourier-transforms	119
X.4	Green-functions with Fourier-transforms	121
X.5	Spectra of musical instruments	127
X.6	Spherical harmonics	129
Y	Complex calculus	137
Y.1	Aspects of complex differentiability	137
Y.2	Cauchy-Riemann differential equations	137
Y.3	Complex line and loop integrals	138
Y.4	Residue theorem and holomorphic functions	139
Y.5	Laurent-series	142
Y.6	Residue theorem	143

Y.7	Conformal mappings	144
Z	Index notation	147
Z.1	Vectors and linear forms	147
Z.2	Coordinates and differentials	148
Z.3	Lagrange- and Hamilton-formalism in components	150
Z.4	Duals	151
Z.5	Gauß- and Stokes-theorems	152
Z.6	Summary of co- and contravariant quantities in electrodynamics . . .	152
