

Table of Contents

Symbols, Indices, and Abbreviations xiii

1 Introduction 1

2 State of the Art..... 11

2.1 Journey Towards the Quantitative Determination of Diffusivities via DLS11

2.2 Thermal Diffusivity of Pure Fluids and Fluid Mixtures 15

2.3 Mutual Diffusion Coefficient in Binary Fluid Mixtures 20

2.4 Simultaneous Determination of Thermal Diffusivity and Mutual Diffusion Coefficient for Binary Fluid Mixtures..... 24

2.5 Diffusivities in the Vicinity of the Critical Point of Binary Fluid Mixtures 29

2.6 Diffusivities in Multicomponent Fluid Mixtures 30

3 Aim of this Thesis 33

4 Applied Strategy and Methods Used 35

4.1 Hydrodynamic Fluctuations in the Bulk of Fluids 35

4.2 Light Scattering from the Bulk of Fluids 39

4.2.1 Scattered Light Spectrum.....41

4.2.2 Time Domain Analysis and Homodyne and Heterodyne Technique..... 44

4.3 Calculation of the Rayleigh Ratio 49

4.4 Setup and Experiment..... 51

4.5 Signal Evaluation and Limiting Factors..... 54

4.5.1 General Data Evaluation 54

4.5.2 Limits to the Simultaneous Determination of Thermal and Mutual Diffusivities..... 56

4.6 Strategies for Signal Attribution 65

5 Results and Discussion69

5.1 Selected Model Systems69

5.1.1 Equimolar CH₄-C₃H₈ Mixture.....69

5.1.2 Liquids with Dissolved Gases..... 77

Table of Contents

5.2 Systems Relevant to Process and Energy Technology81

5.2.1 Liquid Mixtures 82

5.2.2 Liquids with Dissolved Gases..... 87

5.2.3 Gaseous and Supercritical Mixtures 92

6 Conclusions and Prospect 97

7 References 101

Appendix: Publications135
