

Table of Contents

Symbols, Indices, and Abbreviations xiii

1 Introduction..... 1

2 State of the Art7

2.1 Hydrogen Storage and Transport.....7

2.2 Organic Hydrogen Carriers 9

2.2.1 Carriers Obtained from the Synthesis of Gases 9

2.2.2 Liquid Organic Hydrogen Carriers..... 10

2.2.3 The Liquid Organic Hydrogen Carrier Systems Based on
Diphenylmethane or Benzyltoluene 13

2.3 Thermophysical Properties of Liquid Organic Hydrogen Carriers 16

2.3.1 Definition and Measurement Techniques 16

2.3.2 Relevance of Thermophysical Properties for Process Design.....27

2.3.3 Thermophysical Property Data in the Literature.....30

3 Aim of this Thesis..... 33

**4 Fundamentals of Applied Dynamic Light Scattering
Techniques 37**

4.1 Dynamic Light Scattering from Surface Waves – Surface Light
Scattering.....37

4.1.1 Historical Development..... 40

4.1.2 Dynamics of Surface Fluctuations and Dispersion Relation
for Simple Fluids.....42

4.1.3 Spectrum of Scattered Light and Correlation Function47

4.1.4 Dynamics of Surface Fluctuations in the Presence of
Monolayers.....55

4.2 Dynamic Light Scattering from the Bulk of Molecular Fluids58

5 Experiment..... 61

5.1 Experimental Setups..... 61

5.1.1 Apparatus for Dynamic Light Scattering Experiments..... 61

5.1.2 Capillary Viscometry..... 71

5.2 Materials and Sample Preparation.....73

5.2.1 Gases.....73

5.2.2 Benzene, Methanol, Acetone, and 2-Propanol.....73

5.2.3 Bicyclic LOHC Systems.....75

5.3 Measurement Procedure 79

Table of Contents

- 5.3.1 Surface Light Scattering..... 79
 - 5.3.2 Dynamic Light Scattering from the Bulk of Binary Fluid Mixtures..... 80
 - 5.3.3 Capillary Viscometry 81
- 6 Data Evaluation83**
 - 6.1 Surface Light Scattering..... 83
 - 6.1.1 Evaluation Schemes for the Oscillatory Case 84
 - 6.1.2 Evaluation Schemes for the Overdamped Case..... 94
 - 6.1.3 Input Parameters..... 97
 - 6.1.4 Error Propagation Schemes100
 - 6.2 Dynamic Light Scattering from the Bulk of Binary Fluid Mixtures..... 103
 - 6.3 Capillary Viscometry.....106
- 7 Results and Discussion109**
 - 7.1 Benzene, Methanol, Acetone, and 2-Propanol.....109
 - 7.1.1 Interfacial Tension and Viscosity at or Close to Saturation Conditions109
 - 7.1.2 Thermophysical Properties of Methanol in the Presence of Pressurized Hydrogen.....119
 - 7.2 The Liquid Organic Hydrogen Carrier System Based on Diphenylmethane 125
 - 7.2.1 Data Comparison for Pure Substances126
 - 7.2.2 Influence of Impurities on the SLS Results 130
 - 7.2.3 Interfacial Tension and Viscosity as a Function of the Degree of Hydrogenation 136
 - 7.2.4 Further Derivatives in the Diphenylmethane-based System144
 - 7.3 The Benzyltoluene-based System.....154
 - 7.3.1 Data Comparison for Pure Regioisomers and Technical Mixtures.....154
 - 7.3.2 Interfacial Tension and Viscosity of Regioisomers of Benzyltoluene and their Mixtures 158
 - 7.4 Thermophysical Properties of Bicyclic LOHCs in the Presence of Pressurized Hydrogen.....162
 - 7.4.1 Interfacial Tension and Viscosity.....162
 - 7.4.2 Thermal and Mutual Diffusivities.....165
- 8 Conclusion and Outlook169**
- 9 References..... 175**
- 10 Appendix.....207**
 - 10.1 Composition of Investigated Samples 207

10.2 Sources for the Estimation of Gas Phase Properties..... 210

10.3 Results for Viscosity and Interfacial Tension by Surface Light
Scattering 211
