1	Introduction	1
1.1	Contributions and Objectives	6
1.2	Thesis structure	7
2	Mathematical models	9
2.1	Hydraulic system	9
2.1.1	Pipeline system	9
2.1.2	Francis pump-turbine	18
2.1.3	Surge tank	21
2.2	Mechanical system	22
2.3	Electrical system	22
2.3.1	Converters	22
2.3.2	Synchronous Generator	23
2.3.3	Converter-Fed Synchronous Generator	25
2.3.4	Doubly-Fed Induction Machine	26
2.4	System limits	28
2.5	System model	29
3	Stationary Optimization	31
3.1	Optimization task	32
3.2	Implementation	33
3.3	Results and Discussion	33
3.3.1	Turbine mode	33
3.3.2	Pump mode	41
3.4	Conclusions	46

4	Model Predictive Control Strategy	49
4.1	Model Predictive Control	52
4.2	Extended Kalman Filter	56
4.3	Implementation	58
4.4	Results and Discussion	58
4.4.1	Turbine mode	59
4.4.2	Pump mode	64
4.4.3	Model-Plant mismatch	68
4.4.4	Independent unit power control	71
4.4.5	Control of vertically coupled plants	74
4.4.6	Plant without surge tank	76
4.4.7	Surge tank design	77
4.5	Conclusions	78
5	Optimal Shutdown	79
5.1	Optimization tasks	81
5.1.1	Emergency shutdown	81
5.1.2	Partial shutdown	82
5.1.3	Quick shutdown	83
5.1.4	Implementation	84
5.2	Results and Discussion	84
5.2.1	Emergency shutdown	84
5.2.2	Partial shutdown	89
5.2.3	Quick shutdown	91
5.3	Conclusions	96
6	Optimal Market Operation	97
6.1	Mathematical model	100
6.1.1	Plant	100
6.1.2	Thermal system	101
6.1.3	System limits	102
6.1.4	System model	104
6.2	Day-Ahead market with Ancillary services	105
6.2.1	Optimization task	105
6.2.2	Results	107
6.3	Intraday market	112
6.3.1	Optimization task	112
6.3.2	Results	114
6.4	Bidding curve generation	116
6.4.1	Optimization task	117
6.4.2	Results	119
6.5	Conclusions	123

<i>Content</i>	xvii
7 Conclusions and Outlook	125
7.1 Conclusions	125
7.2 Outlook	128
A Weights and Parameters	131
A.1 Model Predictive Control	131
A.2 Optimal Shutdown	133
