

Contents

Preface	vii
1 Incidence Structures and Steiner Designs	1
1.1 Introduction	1
1.2 Examples	3
1.3 Basic Properties and Fisher's Inequality	7
2 Permutation Groups and Group Actions	11
2.1 Introduction	11
2.2 Doubly Transitive Permutation Groups	13
3 Number Theoretical Tools	15
3.1 Introduction	15
3.2 Primitive Divisors and Zsigmondy's Theorem	15
4 Highly Symmetric Steiner Designs	19
4.1 Introduction	19
4.2 Examples	20
4.3 Block's Lemma and Related Results	23
5 A Census of Highly Symmetric Steiner Designs	27
5.1 Introduction	27
5.2 Multiple Point-transitive Steiner Designs	27
5.3 Flag-transitive Steiner Designs	29
6 The Classification of Flag-transitive Steiner Quadruple Systems	35
6.1 Introduction	35
6.2 Main Result	36
6.3 Groups of Automorphisms of Affine Type	37
6.4 Groups of Automorphisms of Almost Simple Type	39

7	The Classification of Flag-transitive Steiner 3-Designs	45
7.1	Introduction	45
7.2	Main Result	45
7.3	Groups of Automorphisms of Affine Type	46
7.4	Groups of Automorphisms of Almost Simple Type	55
8	The Classification of Flag-transitive Steiner 4-Designs	67
8.1	Introduction	67
8.2	Main Result	67
8.3	Groups of Automorphisms of Affine Type	68
8.4	Groups of Automorphisms of Almost Simple Type	70
9	The Classification of Flag-transitive Steiner 5-Designs	93
9.1	Introduction	93
9.2	Main Result	93
9.3	Groups of Automorphisms of Affine Type	94
9.4	Groups of Automorphisms of Almost Simple Type	94
10	The Non-Existence of Flag-transitive Steiner 6-Designs	111
10.1	Introduction	111
10.2	Main Result	111
10.3	Groups of Automorphisms of Affine Type	111
10.4	Groups of Automorphisms of Almost Simple Type	112
	Bibliography	115
	Index	123
