1	Introduction	1
2	Fundamentals	7
2.1	Sample Preparation	7
2.1.1	Solid Phase Extraction	10
2.1.1.1	Solid Phase Microextraction	12
2.1.2	Supercritical Fluid Extraction	15
2.1.3	Pressurized Fluid Extraction	26
2.1.4	Online Liquid Chromatography Clean-up	29
2.1.5	Headspace Techniques	30
2.1.5.1	Static Headspace Technique	31
2.1.5.2	Dynamic Headspace Technique (Purge and Trap)	39
2.1.5.3	Headspace versus Purge and Trap	49
2.1.6	Adsorptive Enrichment and Thermodesorption	54
2.1.6.1	Sample Collection	57
2.1.6.2	Calibration	59
2.1.6.3	Desorption	60
2.1.7	Pyrolysis and Thermal Extraction	63
2.1.7.1	Foil Pyrolysis	64
2.1.7.2	Curie Point Pyrolysis	66
2.1.7.3	Thermal Extraction	68
2.2	Gas Chromatography	70
2.2.1	Fast Gas Chromatography	70
2.2.1.1	Fast Chromatography	70
2.2.1.2	Ultra Fast Chromatography	74
2.2.2	Two Dimensional Gas Chromatography	75
2.2.2.1	Heart Cutting	79
2.2.2.2	Comprehensive GC×GC	79
2.2.2.3	Modulation	83
2.2.2.4	Detection	84
2.2.2.5	Data Handling	85
2.2.2.6	Moving Capillary Stream Switching	87
2.2.3	GC/MS Sample Inlet Systems	90
2.2.3.1	Carrier Gas Regulation	91

2.2.3.2	The Microseal Septum	94
2.2.3.3	Hot Sample Injection	95
2.2.3.4	Cold Injection Systems	100
2.2.3.5	Injection Volumes	108
2.2.3.6	On-column Injection	112
2.2.3.7	Cryofocusing	116
2.2.4	Capillary Columns	118
2.2.4.1	Sample Capacity	128
2.2.4.2	Internal Diameter	129
2.2.4.3	Film Thickness	130
2.2.4.4	Column Length	131
2.2.4.5	Adjusting the Carrier Gas Flow	132
2.2.4.6	Properties of Stationary Phases	134
2.2.5	Chromatography Parameters	137
2.2.5.1	The Chromatogram and its Meaning	138
2.2.5.2	Capacity Factor k'	139
2.2.5.3	Chromatographic Resolution	140
2.2.5.4	Factors Affecting the Resolution	144
2.2.5.5	Maximum Sample Capacity	146
2.2.5.6	Peak Symmetry	146
2.2.5.7	Optimisation of Flow	147
2.2.6	Classical Detectors for GC/MS Systems	151
2.2.6.1	FID	151
2.2.6.2	NPD	153
2.2.6.3	ECD	155
2.2.6.4	PID	157
2.2.6.5	ELCD	159
2.2.6.6	FPD	161
2.2.6.7	PDD	162
2.2.6.8	Connection of Classical Detectors Parallel to the Mass Spectrometer	164
2.3	Mass Spectrometry	166
2.3.1	Resolving Power and Resolution in Mass Spectrometry	167
2.3.1.1	High Resolution	174
2.3.1.2	Unit Mass Resolution	178
2.3.1.3	High and Low Resolution in the Case of Dioxin Analysis	181
2.3.2	Time-of-Flight Analyser	183
2.3.3	Isotope Ratio Monitoring GC/MS	188
2.3.4	Ionisation Procedures	206
2.3.4.1	Electron Impact Ionisation	206
2.3.4.2	Chemical Ionisation	212
2.3.5	Measuring Techniques in GC/MS	231
2.3.5.1	Detection of the Complete Spectrum (Full Scan)	231
2.3.5.2	Recording Individual Masses (SIM/MID)	233
2.3.5.3	High Resolution Accurate Mass MID Data Acquisition	246
2.3.6	MS/MS – Tandem Mass Spectrometry	250
2.3.7	Mass Calibration	261

2.4	Special Aspects of GC/MS Coupling	269
2.4.1	Vacuum Systems	269
2.4.2	GC/MS Interface Solutions	274
2.4.2.1	Open Split Coupling	274
2.4.2.2	Direct Coupling	276
2.4.2.3	Separator Techniques	277
	References for Chapter 2	278
3	Evaluation of GC/MS Analyses	293
3.1	Display of Chromatograms	293
3.1.1	Total Ion Current Chromatograms	294
3.1.2	Mass Chromatograms	295
3.2	Substance Identification	297
3.2.1	Extraction of Mass Spectra	297
3.2.2	The Retention Index	309
3.2.3	Libraries of Mass Spectra	313
3.2.3.1	Universal Mass Spectral Libraries	314
3.2.3.2	Application Libraries of Mass Spectra	317
3.2.4	Library Search Procedures	320
3.2.4.1	The INCOS/NIST Search Procedure	321
3.2.4.2	The PBM Search Procedure	328
3.2.4.3	The SISCOM Procedure	331
3.2.5	Interpretation of Mass Spectra	335
3.2.5.1	Isotope Patterns	337
3.2.5.2	Fragmentation and Rearrangement Reactions	343
3.2.5.3	DMOX Derivatives for Location of Double Bond Positions	350
3.2.6	Mass Spectroscopic Features of Selected Substance Classes	351
3.2.6.1	Volatile Halogenated Hydrocarbons	351
3.2.6.2	Benzene/Toluene/Ethylbenzene/Xylenes (BTEx, Alkylaromatics)	358
3.2.6.3	Polyaromatic Hydrocarbons (PAH)	358
3.2.6.4	Phenols	358
3.2.6.5	Pesticides	364
3.2.6.6	Polychlorinated Biphenyls (PCBs)	378
3.2.6.7	Polychlorinated Dioxins/Furans (PCDDs/PCDFs)	382
3.2.6.8	Drugs	383
3.2.6.9	Explosives	386
3.2.6.10	Chemical Warfare Agents	391
3.2.6.11	Brominated Flame Retardants (BFR)	394
3.3	Quantitation	395
3.3.1	Decision Limit	396
3.3.2	Limit of Detection	397
3.3.3	Limit of Quantitation	397
3.3.4	Sensitivity	399
3.3.5	The Calibration Function	399
3.3.6	Quantitation and Standardisation	401
3.3.6.1	External Standardization	401

3.3.6.2	Internal Standardisation	402
3.3.6.3	The Standard Addition Procedure	406
3.4	Frequently Occurring Impurities	407
	References for Chapter 3	415
4	Applications	421
4.1	Air Analysis According to EPA Method TO-14	421
4.2	BTEX Using Headspace GC/MS	429
4.3	Simultaneous Determination of Volatile Halogenated Hydrocarbons and BTEX	433
4.4	Static Headspace Analysis of Volatile Priority Pollutants	437
4.5	MAGIC 60 – Analysis of Volatile Organic Compounds	443
4.6	irm-GC/MS of Volatile Organic Compounds Using Purge and Trap Extraction	451
4.7	Vinyl Chloride in Drinking Water	454
4.8	Chloral Hydrate in Surface Water	458
4.9	Field Analysis of Soil Air	461
4.10	Residual Monomers and Polymerisation Additives	465
4.11	Geosmin and Methylisoborneol in Drinking Water	468
4.12	Substituted Phenols in Drinking Water	472
4.13	GC/MS/MS Target Compound Analysis of Pesticide Residues in Difficult Matrices	477
4.14	Multi-component Pesticide Analysis by MS/MS	489
4.15	Multi-method for the Determination of 239 Pesticides	498
4.16	Nitrophenol Herbicides in Water	505
4.17	Dinitrophenol Herbicides in Water	508
4.18	Hydroxybenzonitrile Herbicides in Drinking Water	514
4.19	Routine Analysis of 24 PAHs in Water and Soil	521
4.20	Fast GC Quantification of 16 EC Priority PAH Components	525
4.21	Analysis of Water Contaminants by On-line SPE-GC/MS	532
4.22	Determination of Polar Aromatic Amines by SPME	534
4.23	Congener Specific Isotope Analysis of Technical PCB Mixtures	540
4.24	Polychlorinated Biphenyls in Indoor Air	545
4.25	Confirmation Analysis of Dioxins and Dioxin-like PCBs	548
4.26	Fast GC Analysis for PCBs	554
4.27	Analysis of Brominated Flame Retardants PBDE	560
4.28	Trace Analysis of BFRs in Waste Water Using SPME-GC/MS/MS	568
4.29	Analysis of Military Waste	572
4.30	Detection of Drugs in Hair	582
4.31	Detection of Morphine Derivatives	584
4.32	Detection of Cannabis Consumption	589
4.33	Analysis of Steroid Hormones Using MS/MS	592
4.34	Determination of Prostaglandins Using MS/MS	596
4.35	Detection of Clenbuterol by CI	603
4.36	General Unknown Toxicological-chemical Analysis	607
4.37	Clofibric Acid in Aquatic Systems	611

4.38	Polycyclic Musks in Waste Water	616
4.39	Identification and Quantification of Trichothecene Mycotoxins	621
4.40	Highly Sensitive Screening and Quantification of Environmental Components Using Chemical Ionisation with Water	625
4.41	Characterization of Natural Waxes by Pyrolysis-GC/MS	629
4.42	Quantitative Determination of Acrylate Copolymer Layers	633
