|-------------------------------------------------------------|----------|
| <b>1. Introduction</b>                                      | <b>7</b> |
| 1.1. The Liquid Scintillation Process                       | 7        |
| 1.2. Quenching                                              | 10       |
| 1.3. Cerenkov Counting                                      | 13       |
| 1.4. Separation of $\alpha$ - and $\beta/\gamma$ -Radiation | 15       |
| 1.4.1. Scintillator Solutions (Pulse Shape Discrimination)  | 16       |
| 1.4.2. Solid Scintillators (Pulse Height Discrimination)    | 19       |
| 1.5. Triple to Double Coincidence Ratio Method TDCR         | 21       |
| 1.6. Miniaturization of LS Devices                          | 25       |
| 1.7. Cocktails and Sample Preparation                       | 27       |
| 1.8. Extraction for Radionuclide Separation and Enrichment  | 29       |

|                                                                                                |           |
|------------------------------------------------------------------------------------------------|-----------|
| <b>2. Measuring Procedures</b>                                                                 | <b>31</b> |
| <b>2.1. Instrument Calibration Procedures</b>                                                  | <b>33</b> |
| 2.1.1. Quench Correction Curves                                                                | 33        |
| 2.1.2. Dual Labeling                                                                           | 35        |
| 2.1.3. Calibration for $\alpha/\beta$ -Discrimination                                          | 38        |
| <b>2.2. Natural Radionuclides</b>                                                              | <b>41</b> |
| 2.2.1. Aqueous Samples                                                                         | 42        |
| 2.2.1.1. Gross Alpha/Beta Survey in Drinking Water                                             | 42        |
| 2.2.1.2. Radon by Extraction                                                                   | 44        |
| 2.2.1.3. Radon by Gel Counting                                                                 | 47        |
| 2.2.1.4. Ra-226 through Radon Emanation                                                        | 50        |
| 2.2.1.5. Radium by Derived Radium RAD Disk Method                                              | 53        |
| 2.2.1.6. Simultaneous Determination of Ra-226/228 and Pb-210 Using<br>Radium RAD Disk and TDCR | 59        |
| 2.2.1.7. Quick Method for Key Nuclides in Drinking Water                                       | 62        |
| 2.2.1.8. TDCR Cerenkov Counting in Medical $\alpha$ -Therapy<br>(Ra-224/Bi-212)                | 64        |
| 2.2.1.9. Uranium Isotopes by Extractive Scintillation                                          | 67        |
| 2.2.1.10. Tritium by Distillation                                                              | 69        |
| 2.2.1.11. Sea Water Samples                                                                    | 71        |
| 2.2.1.12. LL Tritium in Sea Water by Electrolytic Enrichment                                   | 74        |
| 2.2.2. Organic Samples                                                                         | 76        |
| 2.2.2.1. Radiocarbon in Biobased Products (Fuel)                                               | 76        |
| 2.2.2.2. Sample Preparation by Combustion                                                      | 78        |

|                                                                                     |           |
|-------------------------------------------------------------------------------------|-----------|
| <b>2.3. Radionuclides from Nuclear Fission Activities</b>                           | <b>79</b> |
| 2.3.1. Strontium by Strontium RAD Disk                                              | 80        |
| 2.3.2. Sr-90 and Pb-210 by Extraction Chromatography                                | 83        |
| 2.3.3. Sr-90/Y-90 by LSC and Cerenkov Counting (TDCR)                               | 85        |
| 2.3.4. Rapid Method for Sr Isotopes (Sr-89/Sr-90) by TDCR Cerenkov                  | 89        |
| 2.3.5. Strontium in Milk                                                            | 93        |
| 2.3.6. Tc by Technetium RAD Disk                                                    | 95        |
| 2.3.7. Quality Control of the Eluate from a Tc-99m/Mo-99 Generator                  | 97        |
| 2.3.8. Fe-55 by Extraction Chromatography                                           | 101       |
| 2.3.9. Ni-63 by Extraction Chromatography                                           | 102       |
| 2.3.10. Fe-55 and Ni-63 in Radioactive Waste                                        | 104       |
| 2.3.11. Ca Isotopes in Biological Shield                                            | 107       |
| 2.3.12. Fe-55 and Ca-41 in Decommissioning Activities by TDCR-LSC                   | 111       |
| 2.3.13. Sample Preparation for Pu-241 Analysis (BioRad)                             | 114       |
| 2.3.14. Pu-241 in Presence of Other Plutonium Isotopes (LS- $\alpha$ -Spectrometry) | 116       |
| 2.3.15. Multiple Radionuclide Analysis                                              | 119       |

|                                                                                |            |
|--------------------------------------------------------------------------------|------------|
| <b>2.4. Radiation Protection</b>                                               | <b>122</b> |
| 2.4.1. Radon in Air                                                            | 122        |
| 2.4.1.1. Enrichment in Organic Cocktail                                        | 122        |
| 2.4.1.2. Adsorption on Active Carbon ‘PicoRad’                                 | 129        |
| 2.4.2. NORM Samples                                                            | 131        |
| 2.4.2.1. NORM in Phosphogypsum                                                 | 131        |
| 2.4.2.2. Rn in Crude Oil and Oil Fractions                                     | 137        |
| 2.4.2.3. Radium Isotopes and Pb-210 in Scale, Deposits and<br>Production Water | 139        |
| 2.4.3. Off-gas                                                                 | 141        |
| 2.4.3.1. Tritium                                                               | 141        |
| 2.4.3.2. Radiocarbon                                                           | 144        |
| 2.4.4. Contamination Control by Swipe Assays                                   | 146        |
| 2.4.5. Urine by TDCR Counting (P-32, Sr/Y-90, Fe-55)                           | 151        |

|                                                                                                   |            |
|---------------------------------------------------------------------------------------------------|------------|
| <b>3. Solid Scintillators and Microspheres</b>                                                    | <b>155</b> |
| 3.1. Introduction                                                                                 | 155        |
| 3.2. Plastic Scintillation Resins (PSresins)                                                      | 158        |
| 3.2.1. PSresin for Sr-90 and Pb-210                                                               | 161        |
| 3.2.2. Aliquat-336 PSresin for Tc-99, Pu Isotopes, Cl-36                                          | 164        |
| 3.2.2.1. Tc-99 in Water Samples                                                                   | 164        |
| 3.2.2.2. Pu Isotopes in Water Samples                                                             | 166        |
| 3.2.2.3. Po-210 in Water Samples                                                                  | 168        |
| 3.2.2.4. Cl-36 and I-129 in Decommissioning Samples                                               | 169        |
| 3.2.3. Gross Alpha Using a Methanediphosphonic Acid Based PSresin                                 | 170        |
| <b>4. Quality Assurance and Uncertainty Budget</b>                                                | <b>173</b> |
| 4.1. Uncertainty Budget in LS Spectrometry                                                        | 174        |
| 4.2. Lower Limit of Detection                                                                     | 179        |
| 4.3. Method Evaluation and Validation                                                             | 180        |
| <b>5. Literature</b>                                                                              | <b>183</b> |
