Preface *xi*

Part I Progress in Adsorption 1

1	Classic Adsorption Theory	3
1.1	Adsorption Definition	3
1.2	Type of Adsorption Isotherms	5
1.3	Henry Law	6
1.4	Langmuir Equation of Monolayer Adsorption	7
1.5	BET Equation of Multilayer Adsorption	9
1.5.1	Interpretation of BET Equation for Type-II and Type-III Isotherms	11
1.5.2	Limitations of the BET Equation	12
1.6	Potential Equations of Multilayer Adsorption	13
1.7	Kelvin Equation of Capillary Condensation	17
1.7.1	Notes on Kelvin Equation	18
	References	20
2	Acquisition of Supercritical Adsorption Isotherms	21
2.1	Volumetric Method	21
2.2	Gravimetric Method	23
2.3	Other Measurement Techniques	23
2.4	Principal Factors Affecting Adsorption Measurements	24
2.5	Compressibility Factor and Fugacity Coefficient	25
2.6	Cryostat	28
2.7	Illustration of Calculations	29
2.7.1	Compressibility Factor and Fugacity Coefficient	29
2.7.1.1	By SRK Equation	29
2.7.1.2	By BWR Equation	30
2.7.1.3	Based on Experimental P - V - T Data	31
2.7.1.4	A Comment	32

2.7.2	Calibration of Adsorbent	33
2.8	Generating Adsorption Isotherms by Molecular Simulation	37
	References	38
3	Collection of Supercritical Adsorption Isotherms	41
3.1	Adsorption of H ₂ on Activated Carbon	41
3.2	Adsorption of CH ₄ on Activated Carbon	41
3.3	Adsorption of N ₂ on Silica Gel over a Large Temperature Range	43
3.4	Adsorption of O ₂ on Activated Carbon	46
3.5	Adsorption of CH ₄ and N ₂ on Activated Carbon and Silica Gel	47
3.6	Adsorption of CO ₂ on Activated Carbon for Near-Critical Region	50
3.7	Adsorption of H ₂ , N ₂ , O ₂ , CH ₄ , and CO ₂ on Carbon Molecular Sieves	52
3.8	Adsorption of CO ₂ , CH ₄ , and N ₂ on Silica Molecular Sieves	54
3.9	Adsorption of H ₂ on Carbon Nanotubes	56
3.10	Adsorption of Hydrogen Isotopes on Micro- and Mesoporous Adsorbents with Orderly Structure	57
	References	60
4	Theoretical Basis of Supercritical Adsorption	63
4.1	Isotherm Types of Supercritical Adsorption	63
4.2	Theory Crux of Supercritical Adsorption	63
4.3	Evaluation of the Henry Law Constant from Experimental Isotherms	64
4.3.1	Based on Langmuir Equation	64
4.3.2	Based on Virial Equation	65
4.3.3	Evaluation of Adsorption Heat	66
4.4	Determination of Absolute Adsorption	69
4.5	Evaluation of Volume or Density for the Adsorbed Phase	73
4.6	Isotherm Modelling	76
4.7	Adsorption Mechanism at Supercritical Temperature	77
4.8	Boundary of Supercritical Adsorption	80
4.9	Effect of Supercritical Adsorption Theory	82
4.9.1	Effects on Applied Research	82
4.9.2	Effect on Theoretical Research	83
4.9.2.1	Experimental	84
4.9.2.2	Description of the Adsorbed Phase	86
4.9.2.3	Presented Model for the Prediction of Multicomponent Adsorption	87
4.9.2.4	Verification of the New Model	90
4.9.2.5	Conclusion of Comparisons	96
	References	98
	Part II Effect of Adsorption Progress on Energy and Environment	103
5	Carbon Reduction Makes Coal Power Emission-Free	105
5.1	Present State of Coal-Fired Power Plants	105
5.2	Theoretical Basis of the Zero-Emission Approach	107

5.3	Experimental Basis of the Zero-Emission Approach	109
5.3.1	Experiments for Absence of Water in SFG	110
5.3.2	Experiments with Presence of Water in SFG	112
5.4	Process to Realize Zero-Emission Power Plant	113
5.5	Concluding Remarks	115
	References	115
6	Adsorption/Reaction Compound Function Removes Sulfur from Oil Fuels	117
6.1	Introduction	117
6.2	Theoretical Basis	118
6.3	Experimental Study	120
6.3.1	Adsorbent, Catalyst, and Testing Fuels	120
6.3.2	Reagent Quality and Inspection Method	121
6.3.3	Performance Test	121
6.3.4	Additional Tests	122
6.3.4.1	Regeneration	122
6.3.4.2	Test on Commercial Fuels	122
6.3.4.3	Tests on Corrosion	122
6.3.5	Results and Discussion	122
6.3.5.1	Quasi-first-order Dynamics of the Nanoreaction	122
6.3.5.2	Effect of Temperature	124
6.3.5.3	Effect of Adsorbent and Nanoreactor Dimension	124
6.3.5.4	Compatibility of Desulfur Function with Fuel Type	127
6.3.5.5	Desulfur Performance on Commercial Fuels	127
6.3.5.6	Regeneration and Corrosion Test	128
6.3.5.7	Discussion	129
6.3.5.8	Conclusion	131
	References	131
7	Adsorptive Approaches for Methane-major Fuel	135
7.1	Adsorbed Natural Gas Limited by Adsorption Mechanism	135
7.2	Enhanced Storage of Natural Gas in Wet Adsorbents	137
7.3	Charging/Discharging Experiments of Wet Storage	138
7.3.1	Influence of Charging Pressure and Packing Density of Wet Carbon on Released Amount	139
7.3.2	Analysis and Discussion of Hydrate Formation in Wet Activated Carbon	141
7.3.3	Feature of Charging Process	143
7.3.4	Feature of Discharging Process	144
7.4	Effect of Pore Size Distribution on Storage Capacity of Wet Activated Carbon	145
7.4.1	Conceptional and Experimental Development of Activated Carbon	146
7.4.2	Storage Capacity	147
7.4.3	Results and Discussion	148
7.4.3.1	Porous Structure of the Activated Carbon	148

7.4.3.2	Gravimetric Storage Capacity	149
7.4.3.3	Volumetric Storage Capacity	151
7.4.3.4	Conclusion	152
7.5	Removal of Trace H ₂ S from Natural Gas	152
7.5.1	General Status of the Issue	152
7.5.2	Performance of Solvent-coated Adsorbents	153
7.5.2.1	The Sorbent	153
7.5.2.2	The Testing Process	155
7.5.2.3	The Sorption Pressure	156
7.5.2.4	The Purging Ratio	157
7.5.2.5	Time Allocation in an Operation Cycle	158
7.5.2.6	Conclusion	162
7.6	Enrichment of Methane from Impoverished Gas	163
7.6.1	Separating CH ₄ /N ₂ Mixture by Adsorption	163
7.6.1.1	Experimental	164
7.6.1.2	Evaluation of Separation Coefficient	165
7.6.1.3	Results and Discussion	166
7.6.2	Enrichment of Methane by PSA Complemented with CO ₂ Displacement	170
7.6.2.1	Experimental Apparatus	171
7.6.2.2	Experimental Material	172
7.6.2.3	Experimental Procedure	174
7.6.2.4	Performance Evaluation	175
7.6.2.5	Enrichment Without CO ₂ Displacement	176
7.6.2.6	Enrichment with CO ₂ Displacement	177
7.6.2.7	Selection of Adsorption Time	178
7.6.2.8	Relationship Between Product Concentration and Methane Recovery	179
7.6.2.9	Effect of Feed Gas Concentration on Enrichment	180
7.6.2.10	Studies on Adsorbent Regeneration	182
7.6.2.11	Test on Consecutive Cycling	184
7.6.2.12	Comparison with Literature	184
7.6.2.13	Conclusion	184
	References	185
8	Studies on Hydrogen Energy	191
8.1	Introduction	191
8.2	Recovery of Hydrogen from Process Flue Gas	192
8.2.1	Experimental Apparatus	192
8.2.2	Measurement of Adsorption Isotherms and Breakthrough Curves	194
8.2.3	Studies on the Function of Buffer Tanks	196
8.2.4	Study on Cycling Sequence of the New 4-bed PSA Process	200
8.2.5	Studies on Separation Performance at Low Operation Pressure	202
8.2.5.1	Based on Adsorbents of OAC+ZMS-5A	202
8.2.5.2	Based on Adsorbents of SAC+ZMS-5A	202

- 8.2.5.3 Comparison Between Two Adsorbent Combinations 203
- 8.2.6 Studies on Effect of Purging Ratio 203
- 8.2.7 Studies on Operation Stability and Flexibility of the New
PSA Process 206
- 8.3 Routine Technology of Hydrogen Production 207
- 8.4 Decomposition of Water Through Redox Reactions Looping 209
 - 8.4.1 Theoretical Basis 209
 - 8.4.2 Experimental Proof 210
 - 8.4.2.1 Oxidation/Reduction Cycling 210
 - 8.4.2.2 Test on Catalytic Carbonization of Coal 213
 - 8.4.2.3 Test on Coupling Redox Cycle with Charcoal Gasification 215
 - 8.4.2.4 Comparison with Counterpart Processes 216
 - 8.4.2.5 Conclusion 218
- 8.5 Hydrogen Storage 218
 - 8.5.1 Hydrogen Storage by Cryogenic Adsorption 218
 - 8.5.1.1 Comparison of Compression Storage at 77 K and 298 K 219
 - 8.5.1.2 Storage of H₂ on Activated Carbon Cooled by Liquid Nitrogen 219
 - 8.5.2 Other Studies on Hydrogen Storage 223
 - 8.5.2.1 Liquefaction 223
 - 8.5.2.2 Metallic Hydrides 223
 - 8.5.2.3 Complex Hydrides 224
 - 8.5.2.4 Other Ideas About Hydrogen Storage 224
