Preface	iii
Contents	xi
List of Figures, Tables, and Examples	xxi
1 Elementary Number Theory, Algebra, and Linear Algebra	1
1 Elementary Number Theory	2
1.1 Natural numbers, integers, divisibility	2
1.2 gcd, lcm and the Euclidean division algorithm	3
1.3 Prime numbers and factorization into prime numbers	5
1.4 Congruences, residue classes, and arithmetic	6
1.5 Number theoretical functions	9
1.6 Quadratic residues	12
2 Elementary Algebra	15
2.1 Groups	15
2.1.1 Definitions and laws	15
2.1.2 Subgroups, cosets, and the theorem of Lagrange	17
2.1.3 Morphisms: Isomorphisms and homomorphisms	20
2.1.4 Examples of groups: Cyclic groups and factor groups	23
2.2 Rings	29
2.2.1 Definitions, laws, and zero devisors	29
2.2.2 Subrings	31
2.2.3 Morphisms: Isomorphisms and homomorphisms	32
2.2.4 Examples of rings: Residue class rings and polynomial rings	33
2.3 Finite fields	36
2.3.1 Definitions and laws	36
2.3.2 Field extensions	41

2.3.3	Mean theorem of finite fields	45
2.3.4	Representations of the elements of finite fields	47
2.4	Quadratic field extensions and complex numbers	50
2.4.1	Complex numbers: Number theoretical approach	51
2.4.2	Complex numbers: Algebraic approach	53
3	Elementary Linear Algebra	56
3.1	Definitions	56
3.2	Scalar product	58
3.3	Morphisms	64
3.4	Matrices	66
3.4.1	Matrix algebra and determinants.....	66
3.4.2	Matrix inversion	70
3.4.3	Vectors and matrices: Linear systems of equations	72
3.5	Eigenvalue problems	75
3.5.1	Definitions	75
3.5.2	Properties of the eigenvalues and the characteristic polynomial	77
3.5.3	Eigenvectors and eigenspaces	78
3.6	Jordan canonical form	81
3.6.1	Definition and construction of the Jordan canonical form.....	81
3.6.2	Properties of the Jordan canonical form	84
3.7	Matrix exponential function	86
3.7.1	Substitution polynomial of a matrix and its Taylor sum	86
3.7.2	Calculation of the matrix exponential function	90
2	Representations of Codons and the Protein Code	97
1	Introductory Remarks on Codons and the Protein Code	98
2	Definition, Representations, and Geometric Aspects of Codons	101
2.1	Definition of Codons over $\mathbb{F}(4)$	101
2.2	Algebraic representations of 3-Codons	104
2.2.1	Power and polynomial representation of Codons	104
2.2.2	Complex representation of Codons	108
2.2.3	Anti-Codons and further representations of Codons.....	111
2.3	Geometric representations of Codons	112
2.3.1	Rotation matrices, balls, and n -balls in char $p = 2$	112
2.3.2	3- and 4-dimensional Codons and balls	116
3	Assignment of Codons to the Amino Acids	121
3.1	Motions and the Euclidean group $E(n)$	121
3.1.1	Translations	123

3.1.2	Rotations	125
3.1.3	Quaternions and Clifford algebras	129
3.2	Assignment of Codons and amino acids	131
3.2.1	Definition and properties of Codon multiplets	131
3.2.2	Algebraic ordering of Codons	136
3.2.3	Geometric ordering of Codons	137
3.2.4	Systems theoretical ordering of Codons	139
3.2.5	An excursion on information theory	140
3.2.6	Derivation of the numbers of multiplets by elementary number theory .	143
3.2.7	Further discussion and the mean theorem of protein code	153

3 **Differential Geometry of Space Curves and Supplements to Groups** **157**

1	Differential Geometry of Space Curves and the Formulae of Frenet	158
1.1	Definitions and the formulae of Frenet	158
1.2	Complete system of invariants of space curves	163
1.3	Integration of the equations of Frenet	168
1.4	Relation of the position vector and the Euclidean group of motions	171
2	Investigation of the Group $SO(3; \mathbb{F}(4))$	174
2.1	Number of elements of $SO(3; \mathbb{F}(4))$	175
2.2	Eigenvalues and periods of the elements of $O(3; \mathbb{F}(4))$	177
2.3	Generalization to the group $O(3; \mathbb{F}(2^k))$	178
2.4	Subgroups of $O(3; \mathbb{F}(4))$	182
2.4.1	Relations of products of elementary rotation matrices	182
2.4.2	Cyclic subgroups of $O(3; \mathbb{F}(4))$	185
2.4.3	Non-cyclic subgroups of $O(3; \mathbb{F}(4))$	190
2.5	Partition of 3-dimensional spheres and rotation matrices	193
3	Investigation of the Vector $\underline{Q}(s)$ of a Circular Helix	201
3.1	Analytical properties of the vector $\underline{Q}(s)$	201
3.2	Algebraic properties of the vector $\underline{Q}(s)$	203
3.3	Geometric properties of the vector $\underline{Q}(s)$	205
4	Supplements to the Euclidean Group of Motions	211
4.1	Classification of motions	211
4.2	Finite groups of motions	213
4.3	Group operations	217
4.3.1	Preliminaries	217

4.3.2	Operations on cosets	219
4.3.3	Operation of a group on itself	222
4.3.4	Operations on subsets	224
4.4	Examples for operations of groups on themselves: Dihedron group D_n and icosahedron group	225
4.5	Examples for group operations on sets	230
4	Elementary Protein Structure and (r, ω)-Pairs	237
1	Introduction and Definition of Primary Protein Structure	238
2	Simple Test for Localizing Elementary Secondary Structures	239
3	Detailed Analysis of Elementary Secondary Structures	245
3.1	Definitions, postulates, and discussion	245
3.2	Further investigation of the vector $\underline{Q}(s)$	249
3.2.1	The vector $\underline{Q}(s)$ and the ratio τ/κ	249
3.2.2	The vector $\underline{Q}(s)$ for three distinct arguments s_1, s_2, s_3	256
3.2.3	The vector $\underline{Q}(s)$ for two distinct arguments $s_1 \neq s_2 = s_3$	263
3.2.4	The vector $\underline{Q}(s)$ for equal arguments $s = s_1 = s_2 = s_3$	267
4	Algebra of ordered (r, ω)-pairs	269
5	Comparison with Experimental Data for the secondary Structures of the cro- and cii-protein of bacteriophage lambda	275
5.1	Assignment of pairs (r, ω) and length vectors of the code of cro- protein of enterobacteria phage lambda	285
5.2	Evaluation of the of the cro- and cii-protein of enterobacteria phage lambda	285
5.2.1	Definitions of Codon triple positions and patterns of concatenation	285
5.2.2	Definition of helices and some set theoretical considerations	287
5.2.3	Evaluation of the code of the cro-protein of enterobacteria phage lambda	289
5.2.4	Evaluation of the code of the cii-protein of enterobacteria phage lambda	299
5.2.5	Summary of results for both proteins	307
6	Tertiary Structure	304
6.1	γ -transitions and partition of proteins by Codons	304
6.2	Analysis by lines and axes	307
6.3	Application to the cro- and cii-protein	309

6.3.1	Preliminaries	309
6.3.2	cro-protein	311
6.3.3	cii-protein	314

5 Elementary Protein Structure and Affine Geometry 325

1	Affine Spaces, Mappings, and canonical 2-dimensional Forms of Affinities	326
1.1	Affine spaces	326
1.2	Affine mappings	328
1.3	2-dimensional canonical forms of affinities	332
2	Primary Protein Structure	334
2.1	Characteristic polynomial of the Codon matrix C	334
2.2	Extension of 2-dimensional affinities to three dimensions	336
2.3	Results for the cro- and cii-protein of bacteriophage lambda	342
3	Secondary Structure of Proteins	345
3.1	Fixed point analysis	345
3.1.1	Determination of fixed points	345
3.1.2	Equalities of fixed points	354
3.1.3	Accumulated fixed points and levels	359
3.1.4	An invariance property	362
3.2	Comparison to experimental results	362
3.2.1	Definitions, evaluation, and set theoretical operations	362
3.2.2	Results for the cro-protein of bacteriophage lambda	365
3.2.3	Results for the cii-protein of bacteriophage lambda	370
3.2.4	Summary of results for both proteins	377
4	Tertiary and quaternary Structure of Proteins	379
4.1	γ -transitions in the cro- and cii-protein	379
4.2	Properties of affine lines	380
4.2.1	Properties of individual affine lines	380
4.2.2	Properties of fixed lines: Intersections and scalar products	387
4.2.2.1	Intersections	387
4.2.2.2	Excursion to fractional transformations (Möbius-transformations)	388
4.2.2.3	Scalar products of fixed lines	390
4.3	Application to the cro-and cii-protein of bacteriophage lambda	396
4.3.1	Cro-protein	396
4.3.2	Cii-protein	402
4.4	Summary, discussion, and conformational entropy	405
4.5	A Suggestion for the Quaternary Structure	411

6	Comparison of Approaches, Similar Protein Codes, Mutations, and Redundancy	413
1	Comparison of approaches	414
1.1	Primary protein structure	414
1.2	Secondary protein structure	415
1.2.1	Brief review of approaches	415
1.2.2	Formal comparison	416
1.2.3	Comparison of results	421
1.3	Tertiary protein structure	423
1.3.1	Brief review of both approaches	423
1.3.2	Formal comparison	423
1.3.3	Comparison of results	424
2	Similar Protein Codes	427
2.1	Similar protein code within the approach by (r, ω) -pairs	427
2.1.1	Introduction	427
2.1.2	Rotations of secondary structures	428
2.1.3	Translations of secondary structures	432
2.1.4	Similarity transformations	435
2.1.5	Further similarities	437
2.2	Similar protein code within the approach by affine geometry	438
3	Mutations	440
3.1	Overview on kinds of mutations	440
3.2	Mutations within the approach by (r, ω) -pairs	443
3.2.1	Mathematical treatment in the general case	443
3.2.2	Examples for the general case	447
3.2.3	Treatment of single nucleotide changes for multiplets	453
3.3	Mutations within the approach by affine geometry	462
3.3.1	Point mutation of a doublet	462
3.3.2	Further investigation of the original and mutated code	468
4	Redundancy	477
4.1	Kinds of redundancy	477
4.2	Redundancy and discussion	479
7	Linear Systems Theory	483
1	Systems Theories in Characteristic 0	484
1.1	Definitions	484
1.2	Linear continuous-time systems theory	486
1.2.1	Linear time-varying systems theory	486

1.2.2	Linear time-invariant systems theory	489
1.3	Linear discrete-time systems theory	493
1.3.1	Linear time-varying systems theory	493
1.3.2	Linear time-invariant systems theory	494
2	Systems Theories in Characteristic p	497
2.1	Automata and time-invariant systems theory	497
2.1.1	Automata	497
2.1.2	Linear time-invariant systems theory	498
2.1.2.1	$\mathcal{A}$ -Transform	498
2.1.2.2	Linear time-invariant systems theory	506
2.2	Solution of the homogeneous equation: Structure of the state space	508
2.2.1	Structure of the state space for the eigenvalues $\lambda = 0$	509
2.2.2	Structure of the state space for the eigenvalue $\lambda = 1, \dots, p-1$	514
2.2.3	Structure of the state space for the eigenvalue $\lambda \notin \mathbb{F}(p)$	516
2.2.4	General case	521
2.2.5	Stability of systems	523
2.3	Solution of the inhomogeneous equation	525
2.3.1	Autonomous systems	525
2.3.2	Non-autonomous systems	534
3	Supplements to state vectors and a relation of the homogeneous and autonomous systems	545
3.1	Preliminaries	545
3.2	States of homogeneous systems	548
3.3	States of autonomous systems	555
3.4	Relation of homogeneous and autonomous systems	558
8	Repetition Codes and Nonlinear Systems	563
1	Finite Sequences, Repetition Codes, and $\mathcal{A}$-Transform	564
1.1	Definitions	564
1.2	$\mathcal{A}$ -transform of finite sequences.....	566
1.2.1	Preliminaries	566
1.2.2	Relations of the finite transform $\mathcal{A}_f$ and the $\mathcal{A}$ -transform	567
1.2.3	Convolution theorems	570
1.2.4	Inverse finite $\mathcal{A}$ -transform and examples	572
1.3	Further investigation of repetition codes	574
1.3.1	System theoretical interpretation by reading word by word	574
1.3.2	System theoretical interpretation by shifted reading	578
1.3.3	Further methods for the computation of the characteristic polynomial ..	582
1.3.4	Example 6.6: Repetition code $(CA)_r$ and systems	584

1.3.5	Example 6.7: Repetition code (TAG) _r and systems	587
1.3.6	Example 6.8: Repetition code (CATC) _r and systems	592
1.3.7	Algebra of shifted matrices	597
2	Nonlinear Systems	598
2.1	Nonlinear systems in char 0	598
2.1.1	Nonlinear continuous-time systems	598
2.1.2	Some more results on linear systems and stability	602
2.1.3	Examples of nonlinear systems	608
2.1.4	Nonlinear discrete-time systems	610
2.2	Nonlinear systems in char p	613
2.2.1	Nonlinearities and linearization in char p	613
2.2.2	Examples of nonlinear systems in char $p=2$	616
2.2.3	Nonlinear discrete-time systems and the logistic mapping	618
2.3	Population dynamics and selection	622
2.3.1	Population dynamics and selection in char 0	622
2.3.2	Population dynamics and selection in char $p=2$	624
2.3.3	Discussion	628

A Appendices **633**

Appendix A1	634
A1.1 Power, polynomial, and complex representation of the elements of $\mathbb{F}(64)$	634
Appendix A2	637
A2.1 Solutions of the Diophantine equations for 20 amino acids	638
A2.2 Solutions of the Diophantine equations for 21 amino acids	646
A2.3 Solutions of the Diophantine equations for 22 amino acids	655
A2.4 Numbers ix_i according to Postulates 2.3 and 2.4	656
Appendix A3	659
A3.1 Numerical representation of the elements of $O(3; \mathbb{F}(4))$	657
Matrices of period $\tau = 2$	657
Matrices of period $\tau = 3$	658
Matrices of period $\tau = 5$	659
Appendix A4	661
A4.1 Assignment of parameters (r, ω) to experimental data of cii-protein	662
A4.2 (r, ω) -pairs for all τ/κ and Codon triple positions of cii-protein	671

Appendix A5		675
A5.1	Characteristic polynomials, eigenvalues, and geometric interpretation for cii-protein	676
A5.2	Locations of fixed points and lines $\underline{x}$ for cii-protein	681
Appendix A6		693
A6.1	Location of fixed points and lines $\underline{x}$ for cro-protein, aspartic acid (CAU) ^T	694
A6.2	Location of fixed points and lines $\underline{x}$ for cro-protein, aspartic acid (CAC) ^T	696
