

Contents

- 1 Introduction3**
 - 1.1 District heating in a climate-neutral energy system..... 3
 - 1.2 Modelling approaches for district heating..... 8
 - 1.3 Objective and structure of this thesis..... 12
- 2 Identifying future district heating potentials in Germany: a study using empirical insights and distribution cost analysis..... 19**
 - 2.1 Introduction 19
 - 2.2 Data and method.....22
 - 2.3 Results26
 - 2.4 Conclusion35
 - A.1 Detailed description of input data sets38
- 3 Decarbonizing district heating in EU-27 + UK: How much excess heat is available from industrial sites? 39**
 - 3.1 Introduction39
 - 3.2 Data and methods.....44
 - 3.3 Results57
 - 3.4 Discussion64
 - A.2 Detailed industry specific fuel demand, exhaust temperatures and excess heat estimates71
 - A.3 Spatial matches of industrial sites and district heating areas by distance classes.....76
- 4 The effect of low-carbon processes on industrial excess heat potentials for district heating in the EU: A GIS-based analysis.....77**
 - 4.1 Introduction77
 - 4.2 Background78
 - 4.3 Method and data79
 - 4.4 Results90
 - 4.5 Discussion96
 - 4.6 Conclusion98
 - A.4 Detailed process- and country-specific results..... 100
- 5 Spatial analysis of renewable and excess heat potentials for climate-neutral district heating in Europe103**
 - 5.1 Introduction and background 103
 - 5.2 Data and method..... 106
 - 5.3 Results 115
 - 5.4 Discussion 123
 - 5.5 Conclusions 126
 - A.5 DH areas 128
 - A.6 Cluster analysis..... 132

A.7	Country-specific results (output of clustering)	142
6	Achieving climate neutrality in district heating: the impact of system temperature levels on the supply mix of EU-27 in 2050.....	151
6.1	Introduction	151
6.2	Methodology	154
6.3	Results	162
6.4	Discussion and limitations	167
6.5	Conclusions	169
A.8	RES and EH potentials of individual MS	171
A.9	DH shares	172
A.10	DH generation technologies.....	173
A.11	DH generation mix of MS	174
7	Integrating district heating potentials into European energy system modelling: An assessment of cost advantages of renewable and excess heat	175
7.1	Introduction	175
7.2	Methodology and data	177
7.3	Results	186
7.4	Discussion	193
7.5	Conclusions	195
A.12	Detailed description of model approach and input data	197
8	Conclusion.....	201
8.1	Summary of achievements	203
8.2	Limitations	214
8.3	Outlook	218
	References.....	221
	Summary.....	253
	Samenvatting.....	257
	AI assistance.....	261
	Acknowledgments.....	263
	Curriculum Vitae	265
